4 Port Solenoid Valve Cassette Type Manifold

Series SJ2000/3000

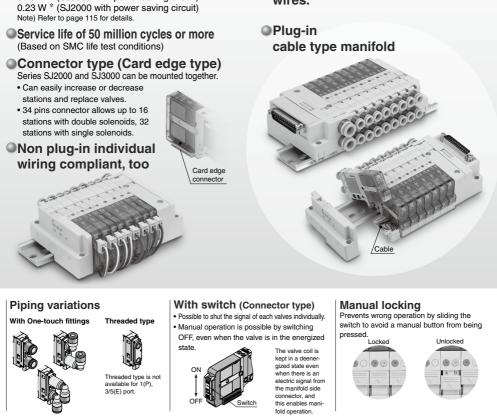

Rubber Seal

4 Port Solenoid Valve Cassette Type Manifold

wires.

Manifold uses halogen-free lead

Fittings are replaceable.

Power consumption

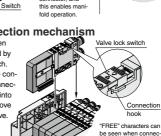

0.15 W * (SJ3000 with power saving circuit)

Fittings (including type and size) can be easily changed by removing a clip.

Valve connection mechanism

Connection between valves can be fixed by the valve lock switch. Connection can be confirmed with the connection hook inserted into the connection groove of the adjacent valve.

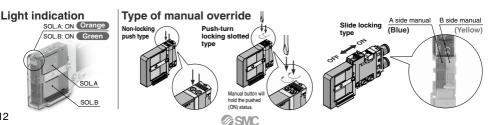

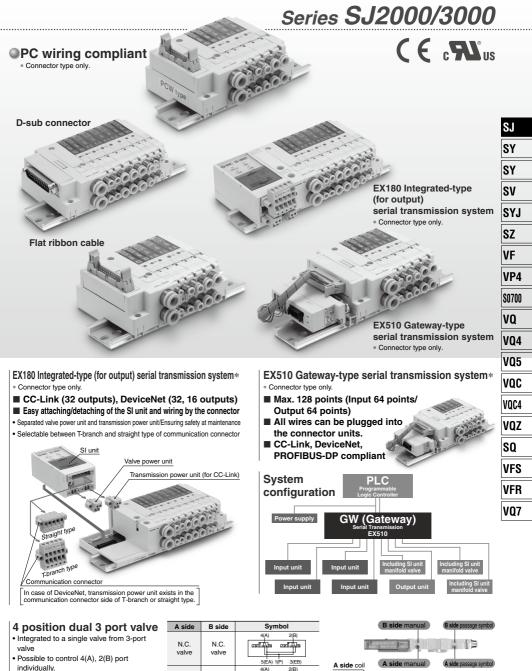

tion is unlocked

Connector mounting direction Connecter mounting direction

can be changed by sliding the switch

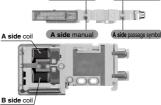

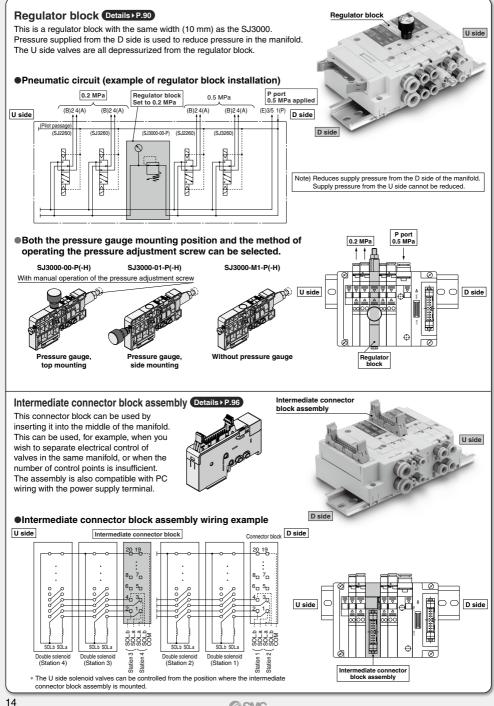

- Can be mounted on the same manifold with a 4-port valve.
- Prepared 3 types of combination
- Label with the same colors of the manual override is attached to show the functions of A side and B side.

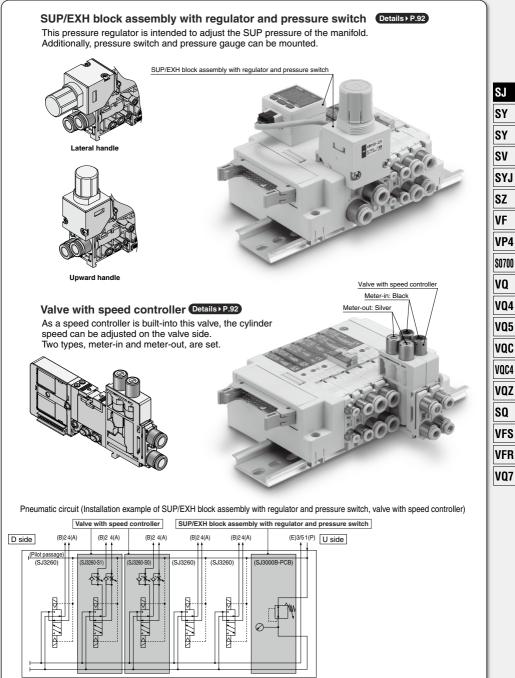

N.C. valve	N.C. valve	4(A) 2(B)

	(ØSMC

4 Port Solenoid Valve Cassette Type Manifold

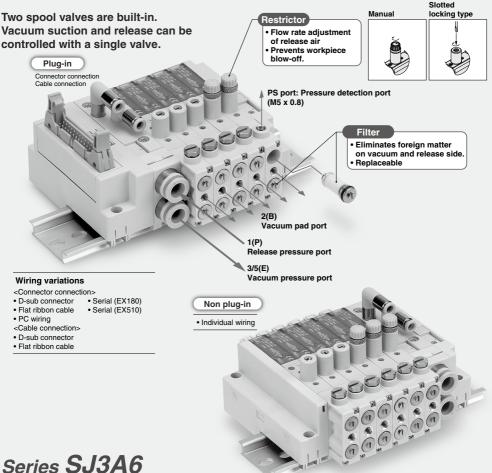

SMC

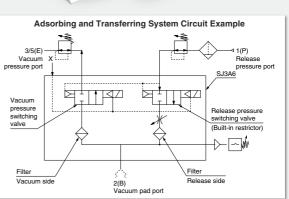

Vacuum Release Valve with Restrictor (E Rus

- Power consumption 0.15 W * (with power saving circuit)
- Width: 10 mm (same size as Series SJ3000)
- Equipped with restrictor to enable flow rate adjustment of release air.
- Replaceable filters are built-in on the vacuum and release sides.
- Equipped with a pressure detection port enabling connection of a pressure switch, etc.
- Can be combined with 4 port solenoid valve, Series SJ2000/3000 (Made to Order). (Consult SMC for details.)
- Enables 2-system pressure switching where the 1(P) port and 3/5(E) are set to different positive pressures.

(In this case, flow can be adjusted on the P-port side only.)

Note) Refer to page 115 for details.

Note 1) When many valves are operated simultaneously, use B type (SUP/EXH both sides), applying pressure to the 1(P) ports on both sides and exhaust from the 3/5(E) ports on both sides.

Note 2) The weight W is the value for the D-sub connector manifold only with internal pilot, SUP/EXH block straight fittings specifications. To obtain the weight with solenoid valves attached, add the solenoid valve weights given on page 22 for the appropriate number of stations. Refer to page 88 for the weight of DIN rail. (Please contact SMC for the weight of external pilot specifications, elbow fittings.)

Connector Wiring Diagram

For both serial and parallel wiring, additional valves are sequentially assigned pins on the connector. This makes it completely unnecessary to disassemble the connector unit.

Series SJ2000/3000 How to Increase Manifold Stations 1

Connector Type

Loosen threads (a), which are fixed onto the DIN rail (two locations on one side). S.I U side SY Sorial SY connector block In the direction of the coil, slide the valve where the 2 End block assembly assembly station is desired to add and the valve lock switch on SV each block. SUP/EXH block assembly D side If blocks are removed without completely releasing SYJ the valve lock switch, the connection hook of that Connector block assembly switch could be damaged or deformed. SZ VF Valve lock switch Valve lock switch [Unlocked] ("FREE" appears, which indicates VP4 the manual switch is locked.) S0700 Install an additional valve or an SUP/EXH block 3 assembly block on the DIN rail. VO Connecting hook V04 2. Press the manifold in the arrow direction and mount it on the rail. V05 VOC VOC4 Hook on the rail VOZ SO Valve lock switch [Locked] A manifold equipped with a valve or a block assembly ("FREE" cannot be seen.) can be mounted on the DIN rail. However, a serial VFS connector block assembly cannot be mounted on the DIN rail when it is connected with another block: the VFR serial connector block must be mounted separately. V07 Press the 4 Press the valves and block assemblies to each other for manifold connection. Press the valve lock switch in the cylinder port direction until it does not go any further. Fasten threads (a) onto the DIN rail. After fixing the connector block assembly, fasten the threads onto the end block assembly while holding it Press the manifold lightly by hand. This is necessary to improve sealing. D-sub, Connector block assembly for flat ribbon cable, End block assembly M3: 0.6 N·m

Caution D-sub, connector block assembly for Tat ribbon cable, End bloc Connector block assembly for EX180 serial wiring M4: 1.4 N·m Mounting bracket for EX510 serial wiring M4: 0.6 N·m

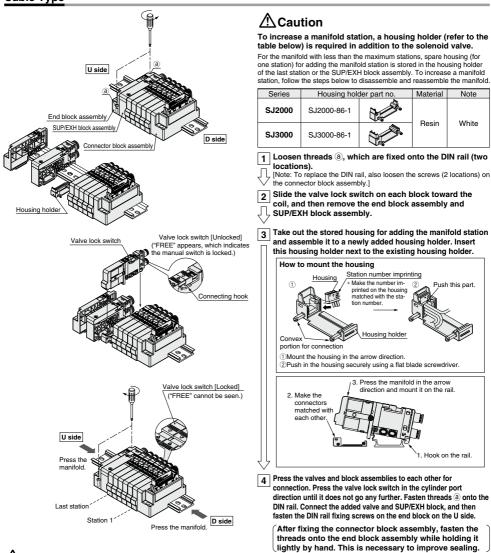

1. When increasing the number of stations from 10 or below to 11 or above, increase the number of SUP/EXH block assemblies as well.

- Be sure to turn off the power and stop the supply of air before disassembly. Furthermore, since air may remain inside the actuator, piping and manifold, confirm that the air is completely exhausted before performing any work.
- 3. After assembly and disassembly, air leakage could occur if blocks are not well connected or a thread is not tightly fastened onto the end block assembly. Before supplying air, make sure that no gaps exist in between blocks and that the valve and block are tightly fastened onto the DIN rail. Also, make sure that air is not leaking before use.
- For the SJ3A6 series manifold with vacuum release valve with restrictor, there is no valve lock switch for connecting, so when mounting, tighten the screws after checking that there are no gaps between valves.

Series SJ2000/3000 How to Increase Manifold Stations 2

Cable Type

Caution D-sub, Connector block assembly for flat ribbon cable, End block assembly M3: 0.6 N-m

- When increasing the number of stations from 10 or below to 11 or above, increase the number of SUP/EXH block assemblies as well. Add the valve to
 the U side of the last station, and then add the SUP/EXH block assembly to its U side. The SUP/EXH block cannot be added to a position adjacent to the
 connector block assembly or an intermediate position.
- Be sure to turn off the power and stop the supply of air before disassembly. Furthermore, since air may remain inside the actuator, piping and manifold, confirm that the air is completely exhausted before performing any work.
- 3. After assembly and disassembly, air leakage could occur if blocks are not well connected or a thread is not tightly fastened onto the end block assembly. Before supplying air, make sure that no gaps exist in between blocks and that the valve and block are tightly fastened onto the DIN rail. Also, make sure that air is not leaking before use.
- 4. For the SJ3A6 series manifold with vacuum release valve with restrictor, there is no valve lock switch for connecting, so when mounting, tighten the screws after checking that there are no gaps between valves.

Note 1) The valves cannot be operated only with the SUP/EXH block assembly for different pressure, select them in combination with the SUP/EXH block assembly for internal/ external pilot.

Note 2) Refer to page 86 about the SUP/EXH block disk assembly and method of handling of parts at different pressure.

Common to Connector Type/Cable Type/Individual Wiring

SUP block disk assembly

By placing a SUP block disk assembly in a manifold valve's pressure supply passage, two different high and/ow pressures can be supplied to one manifold. When supplying different pressures using the manifold of the internal pilot, fill out a manifold specification sheet to place an order for an SUP/EXH block assembly for the internal pilot specifications and another SUP/EXH block assembly for the different pressure internal pilot specifications (Refer to Circuit Diagram 1).

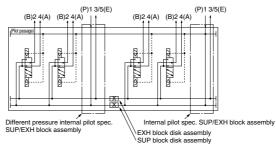

Series	Part no.			
SJ2000	SJ3000-44-1A			
S.13000	5J3000-44-TA			

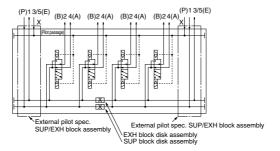

[Different pressure pneumatic circuit diagram]

The SJ series supplies air to the pilot port of each valve using a 1(P) port of the SUP/EXH block assembly. When using in situations such as where there are different pressures, combine SUP/EXH block assemblies for internal pilot, external pilot and different-pressure by referring to the circuit below.

1. Different-pressure spec. using the internal pilot

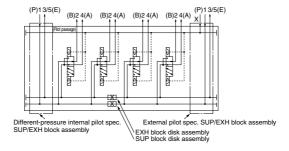

2. Different-pressure spec. using the external pilot (For using the SUP/EXH block assembly for external pilot)

3. Different-pressure spec. using the external pilot

(For using the SUP/EXH block assembly for different-pressure internal pilot spec.)

Note 1) When operating under the different-pressure spec., supply the higher pressure to the pilot passage. Note 2) If there is a need to partition the pilot passage, consult SMC.

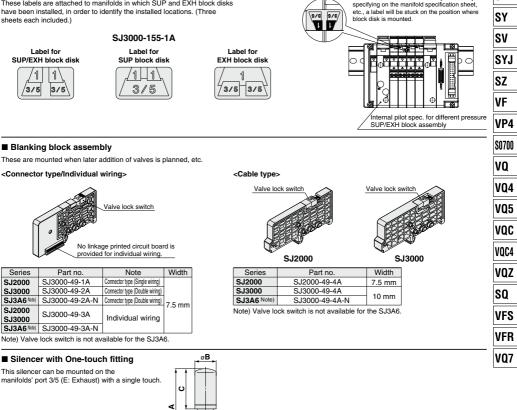

Common to Connector Type/Cable Type/Individual Wiring

EXH block disk assembly

By installing an EXH block disk in a manifold valve's exhaust passage, the valve's exhaust can be separated so that it will not affect other valves.

These labels are attached to manifolds in which SUP and EXH block disks have been installed, in order to identify the installed locations. (Three sheets each included.)

Common to Connector Type/Cable Type/Individual Wiring

This is a fitting for cylinder ports which enables simultaneous actuation and increase in flow rate of valves for 2 stations. This is a One-touch fitting with port sizes of ø8 and ø5/16.

* When arranging mounted to the valve, arrange the valve part no. using the part no. without the One-touch fitting, and then add the part no. for the dual flow fitting. If the arrangement is complicated, please specify them by means of the manifold specification sheet.

Regulator block/How to Order

This is used to reduce the pressure supplied from the D side inside the manifold. All valves on the U side are depressurized from the regulator block.

Note 1) Be sure to apply the pressure from the 1(P) port of the manifold before using the regulator block. Note 2) When ordering with a regulator block installed in the manifold, please order using the manifold specification sheet.

ium pressure side filter.]

<Filter replacement instructions>

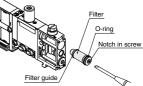

If there are situations such as filter clogging, a drop in suction force, or slow response time, stop operation and replace the filter.

/1(P)

- 1. Using a precision driver, remove the filter assembly (12 or 13) from the main unit.
- 2. Turn the filter guide by hand and remove.

3/5(E)

- Replace the filter (13 or 15) and gently hand tighten the filter guide. At this time, check that there is no foreign matter on the O-ring of the filter assembly.
- 4. Return the filter assembly to the main unit. (Tightening torque: 0.12 N·m)

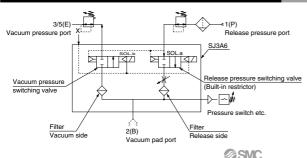

After tightening the plug (M-5P) with a tightening torque of 1 N-m, or manually tightening, use the tightening tool and tighten it by 1/4 turn.

Manual Override Switch Operation

MWarning

For manual override operation, move the manual override switch to a position where letters A and B can be seen. [Manual override switch release status (refer to the figure below)] Operation with the manual override switch in a locked status can cause damage to the manual override and air leakage, so be sure to release the manual override switch before use. After manual override operation, lock the manual switch for use (when the manual override of the push-turn locking slotted type is locked, a manual override switch cannot be locked).

Manual override switch locked status

Manual override switch unlocked status

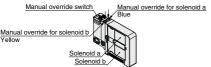

Manual Override Operation

MWarning

When the manual override is operated, connected equipment will be actuated. Confirm safety before operating.

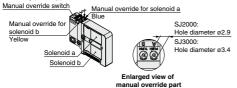

Non-locking push type

Press in the direction of the arrow.

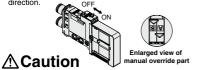

■Push-turn locking slotted type

While pressing, turn in the direction of the arrow (90° clockwise). If it is not turned, it can be used in the same way as the non-locking push type.

Slide locking type (manual override)

Slide the manual override all the way to the ON side in the arrow direction. The manual override is then locked. To unlock the manual override, slide it toward the OFF side in the arrow direction. OFF

When you operate the D type with a screw driver, turn it gently using a watchmaker's screw driver. [Torque: under $0.05 N \cdot m$] When you lock the manual override of the D type, be sure to push it before turning. [Load: 10 N or less] Turning without pushing can cause damage to the manual override and trouble such as air leakage, etc.

Valve with Switch

▲Warning

When turning OFF the valve using the switch, move it to the position where the valve is locked. If the switch is at an improper position and is energized, equipment connected to the valve could be actuated.

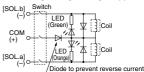

Also, if the switch is turned OFF on the valve in the energized state, be careful because any actuators connected to a single solenoid, a dual 3 port valve or a 3 position valve will actuate.

ON position OF

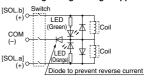

Normal operation: The valve is switched according to electric signals from the connector on the manifold side. The valve coil is kept in a deenergized state even when there is an electric signal from the connector on the manifold side.

Electric circuit diagram (with positive common and light/surge voltage suppressor)

(with negative common and light/surge voltage suppressor)

Built-in Back Pressure Check Valve Type

▲Caution

 Valves with built-in back pressure check valve is to protect the back pressure inside a valve. For this reason, use caution the valves with external pilot specification cannot be pressurized from exhaust port [3/5(E)].

As compared with the types which do not integrate the back pressure check valve, C value of the flow characteristics (sonic conductance) goes down. For details, please contact SMC.

2. Do not switch valves when A or B port is open to the atmosphere, or while the actuators and air operated equipment are in operation. The back pressure prevention seal may be peeled off, which may cause air leakage or malfunctions. Use caution especially when performing a trial operation or maintenance work.

Exhaust Restriction

▲Caution

Since the SJ series is a type in which the pilot valve exhaust joins the main valve exhaust inside the valve, use caution, so that the piping from the exhaust port is not restricted.

Be sure to read before handling. Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

When Using a 4 Port Valve as a 3 Port Valve

When using a 4 port valve as a 3 port valve

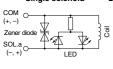

The SJ2000/3000 series can be used as normally closed (N.C.) or normally open (N.O.) 3 port valves by plugging one of the cylinder ports 4(A) or 2(B). However, exhaust ports should be left open. It is convenient when a double solenoid 3 port valve is required.

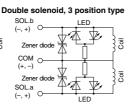

Plug position		2(B) port	4(A) port		
Тур	e of actuation	N.C.	N.O.		
Number of solenoids	Single	(A)4 2(B) T (EA)5 1 3(EB) (P)	(A)4 2(B) X (EA)5 1 3(EB) (P)		
	Double	(A)4 2(B)	(A)4 2(B) X (EA)513(EB) (P)		

Light/Surge Voltage Suppressor

≜Caution

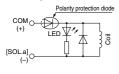

Non-polar type Single solenoid

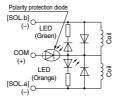

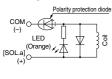

Positive common Single solenoid

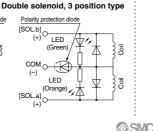

Double solenoid, 3 position type

Negative common Single solenoid

Continuous Duty

≜Caution

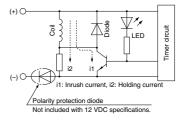

If a valve is energized continuously for a long time, the rise in temperature due to heat-up of the coil may cause a decline in solenoid valve performance, reduce service life, or have adverse effects on peripheral equipment. If a valve will be energized continuously, please be sure to use the "Continuous duty type" with a power saving circuit. In particular, there will be a large increase in temperature if 3 or more neighboring stations are simultaneously continuously energized for a long time, or if the A and B sides are simultaneously continuously energized for a long time in a dual 3 port valve. Please be very careful in such cases.

If the continuously energized time exceeds three hours, contact SMC.

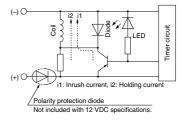

With power saving circuit

Compared to the standard products, power consumption is reduced down to approx. 1/3 (in case of SJ3□60T) by cutting the unnecessary wattage required to hold the valve in an energized state. (Effective energizing time is over 67 ms at 24 VDC.)

Electric circuit diagram (with power saving circuit) In case of positive common, single solenoid

In case of negative common, single solenoid

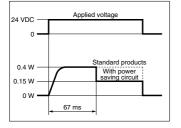

Be sure to read before handling. Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

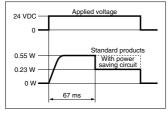

Working Principle

With the circuit of page 114, the current consumption, when holding, is reduced to save energy. Please refer to the electric wave form data below.

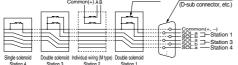

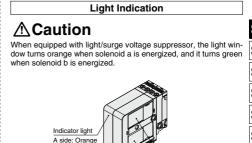

- When a power saving circuit is installed, a diode to prevent reverse current is not available for 12 VDC spec. Therefore, use caution not to connect in reverse.
- Be careful about the allowable voltage fluctuation since a voltage drop of about 0.5 V occurs due to a transistor. (Refer to the solenoid specifications of each valve for details.)

Measures to prevent detours of surge voltage

When the DC power supply is shut off, by the emergency breaking circuit for example, valve misoperation may occur due to surge voltage produced by other electrical parts (such as electromagnetic coils). Please take measures to prevent surges from detouring to the valve (surge protection diode etc.), or use a valve with diode to prevent reverse current (polar: Z type). However, surge countermeasures are provided on the serial unit side of the serial type.

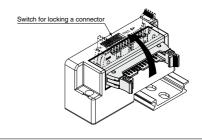

Solenoid b Changing the Connector Entry Direction

olenoid a

▲Caution

B side: Green

To change the connector's entry direction, set the switch on the top of the connector block to the FREE position, before turning the connector. Make sure to set the switch back to the LOCK position before connecting the connector. (When the switch is difficult to slide, move the connector a little so that it will slide easier.) If an excessive force is applied on the connector in the LOCK position, the connector block may be damaged. Also, using in such a way that the connector floats in the FREE position, it may cause the lead wire, etc. to break. Thus, refrain from using in these ways.

Manifold Mounting

When attaching a manifold to a mounting surface, etc., with bolts, if the entire bottom surface of the DIN rail contacts the mounting surface in a horizontal mounting, it can be used by simply securing both ends of the DIN rail. However, for any other mounting method or for side facing and rear facing, etc., secure the DIN rail with bolts at uniform intervals using the following as a guide: 2 to 5 stations at 2 locations, 6 to 10 stations at 3 locations, 11 to 15 stations at 4 locations, 16 to 20 stations at 5 locations, 21 to 25 stations at 6 locations, a 6 to 30 stations at 7 locations and more than 30 stations at 8 locations.

In addition, even in the case of a horizontal mounting, if the mounting surface is subject to vibration, etc., take the same measures indicated above. If secured at fewer than the specified number of locations, warping or twisting may occur in the DIN rail and manifold, causing trouble such as air leakage.

Connector side

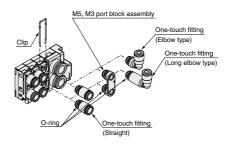

Be sure to read before handling. Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

Inch Size

Fitting Replacement

≜Caution

By replacing a valve's fitting assembly, it is possible to change the port size of the 4(A), 2(B), 1(P), and 3/5(E) ports. When replacing it, pull out the fitting assembly after removing the clip with a flat blade screw driver, etc. To mount a new fitting assembly, insert it into place and then fully reinsert the clip.

Fitting Assembly Part No.

Metric Size

Port	Port size	Part no.
	ø2 One-touch fitting(Straight)	KJH02-C1
	ø4 One-touch fitting (Straight)	KJH04-C1

	ø4 One-touch fitting (Long elbow type)	KJW04-C1-N
	M3 port block assembly	SJ2000-56-1A
	ø2 One-touch fitting (Straight)	KJH02-C2
	ø4 One-touch fitting (Straight)	KJH04-C2
	ø6 One-touch fitting (Straight)	KJH06-C2
	ø2 One-touch fitting (Elbow type)	KJL02-C2
SJ3000	ø4 One-touch fitting (Elbow type)	KJL04-C2
4(A) 2(B)	ø6 One-touch fitting (Elbow type)	KJL06-C2-N
-(-)	ø2 One-touch fitting (Long elbow type)	KJW02-C2
	ø4 One-touch fitting (Long elbow type)	KJW04-C2
	ø6 One-touch fitting (Long elbow type)	KJW06-C2-N
	M5 port block assembly	SJ3000-56-1A
	ø6 One-touch fitting (Straight)	VVQ1000-51A-C6
	ø6 One-touch fitting (Elbow type)	SZ3000-74-1A-L6
1(P)	ø6 One-touch fitting (Long elbow type)	SZ3000-74-2A-L6
3/5(É)	ø8 One-touch fitting (Straight)	VVQ1000-51A-C8
	ø8 One-touch fitting (Elbow type)	SZ3000-74-1A-L8
	ø8 One-touch fitting (Long elbow type)	SZ3000-74-2A-L8

Port	Port size	Part no.					
	ø1/8" One-touch fitting (Straight)	KJH01-C1					
	ø5/32" One-touch fitting (Straight)	KJH03-C1					
SJ2000	ø1/8" One-touch fitting (Elbow type)	KJL01-C1					
4(A) 2(B)	ø5/32" One-touch fitting (Elbow type)	KJL03-C1					
-(-)	ø1/8" One-touch fitting (Long elbow type)	KJW01-C1					
	ø5/32" One-touch fitting (Long elbow type)	KJW03-C1					
	ø1/8" One-touch fitting (Straight)	KJH01-C2					
	ø5/32" One-touch fitting (Straight)	KJH03-C2					
	ø1/4" One-touch fitting (Straight)	KJH07-C2					
SJ3000	ø1/8" One-touch fitting (Elbow type)	KJL01-C2					
4(A)	ø5/32" One-touch fitting (Elbow type)	KJL03-C2					
2(B)	ø1/4" One-touch fitting (Elbow type)	KJL07-C2					
	ø1/8" One-touch fitting (Long elbow type)	KJW01-C2					
	ø5/32" One-touch fitting (Long elbow type)	KJW03-C2					
	ø1/4" One-touch fitting (Long elbow type)	KJW07-C2					
1(P)	ø1/4" One-touch fitting (Straight)	VVQ1000-51A-N7					
3/5(É)	ø5/16" One-touch fitting (Straight)	VVQ1000-51A-N9					

Note 1) To change the port size of the 1(P), 3/5(E) ports into the port sizes other than ø8 (straight), specify the change by means of the manifold specification sheet.

Note 2) Be careful to avoid damage or contamination to the O-rings, as this can cause air leakage.

Note 3) When removing a straight-type fitting from a valve, after removing the clip, attach tubing or a plug (KJP-02, KQ2P-IIII) to the One-touch fitting, and pull it out while holding the tubing or plug. If it is pulled out while holding the release button of the fitting (resin part), the release button may be damaged.

Note 4) Be sure to turn off the power and stop the supply of air before disassembly. Furthermore, since air may remain inside the actuator, piping and manifold, confirm that the air is completely exhausted before starting any work.

Note 5) While inserting a tubing into an elbow-type fitting, hold the main body of the fitting by hand. Failure to do so will exert an undue force on the valve or the fitting, resulting in air leakage or damage.

Note 6) Each fitting assembly part no. contains 1 pc. Additionally, when the piping is constructed in the same direction using the elbow-type fitting, order the elbow-type and/or long elbow-type fitting.

One-touch Fittings

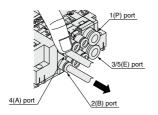

≜Caution

The pitch of the SJ series piping ports (A, B etc.) has been set assuming the use of KJ series One-touch fittings. Therefore, when using fittings with an M3 or M5 port block assembly, there may be some interference between fittings, depending on the type and size, so please use after checking dimensions in the catalog for the pipe fitting being used.

1. Tube attachment/detachment for One-touch fittings

1) Tube attachment

- (1) Take a tube having no flaws on its periphery and cut it off at a right angle. When cutting the tube, use tube cutters TK-1, 2 or 3. Do not use pinchers, nippers or scissors, etc. If cutting is done with tools other than tube cutters, the tube may be cut diagonally or become flattened, etc., making a secure installation impossible, and causing problems such as the tube pulling out after installation or air leakage.
 - Also allow some extra length in the tube.
- (2) Grasp the tube and push it in slowly, inserting it securely all the way into the fitting.
- (3) After inserting the tube, pull on it lightly to confirm that it will not come out. If it is not installed securely all the way into the fitting, this can cause problems such as air leakage or the tube pulling out.
- 2) Tube detachment
 - (1) The 4(A) and 2(B) ports use the KJ series, so the tube can be removed by pressing on part of the release button. However, for the 1(P) and 3/5(E) ports, please press the release button evenly as before.
 - press the release button evenly as before.
 (2) Pull out the tube while holding down the release button is not so that it does not come out. If the release button is not pressed down sufficiently, there will be increased bite on the tube and it will become more difficult to pull it out.
 - (3) When the removed tube is to be used again, cut off the portion which has been chewed before reusing it. If the chewed portion of the tube is used as is, this can cause trouble such as air leakage or difficulty in removing the tube.

Hold down part of the release button with your finger or a similar tool, as shown in the diagram, and pull out in the direction indicated by the arrow.

Other Tube Brands

- ▲Caution
- 1. When using other than SMC brand tube, confirm that the following specifications are satisfied with respect to the tube outside diameter tolerance.
 - 1) Nylon tube within ± 0.1 mm
 - 2) Soft nylon tube within ± 0.1 mm
 - 3) Polyurethane tube within +0.15 mm, within -0.2 mm

Do not use tube which does not meet these outside diameter tolerances. It may not be possible to connect them, or they may cause other trouble, such as air leakage or the tube pulling out after connection.

How to Use Plug Connector

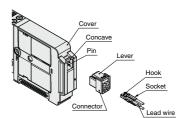

≜Caution

When attaching and detaching a connector, first shut off the electric power and the air supply.

Also, crimp the lead wires and sockets securely.

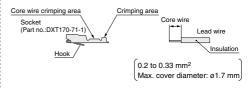

1. Connector attachment/detachment

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.
- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

2. Crimping of lead wires and sockets

Peel 3.2 to 3.7 mm of the tip of lead wire, enter the core wires neatly into a socket and crimp it with a special crimp tool. Be careful so that the cover of lead wire does not enter into the crimping part. (Please contact SMC for the dedicated crimping tools.)

Be sure to read before handling. Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

How to Use Plug Connector

≜Caution

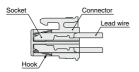

3. Lead wires with sockets attachment/detachment

Attachment

Insert the sockets into the square holes of the connector (with A, B, C, and N indication), and continue to push the sockets all the way in until the lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Next, confirm that they are locked by pulling lightly on the lead wires.

Detachment

To detach a socket from a connector, pull out the lead wire while pressing the socket's hook with a stick having a thin tip (approx. 1 mm). If the socket is used again, spread the hook outward.

<Positive common>

<Negative common> Single solenoid

Plug Connector Lead Wire Length

▲Caution

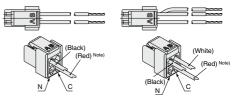

Plug connector lead wires have a standard length of 300 mm, however, the following lengths are also available.

Connector Assembly Part No.

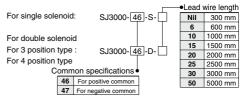

Single solenoid

Double solenoid, 3 position type, 4 position type

SJ3000-46-S-□ (for positive common) SJ3000-46-D-□ (for positive common) SJ3000-47-S-□ (for negative common) SJ3000-47-D-□ (for negative common)

Note) In case of negative common, the lead wire changes from red to yellow.

For single solenoid

Without lead wire : SJ3000-46-S-N (positive/negative common) (Connector, Socket x 2 pcs. only)

For double solenoid

Without lead wire : SJ3000-46-D-N (positive/negative common) (Connector, Socket x 3 pcs. only)

How to Order

Include the connector assembly part number together with the part number for the plug connector's solenoid valve without connector.

(Example) In case of lead wire length 2000 mm and positive common

SJ3160-5MOZ-C6 SJ3000-46-S-20

Connector Assembly for Manifolds (for Junction Common)

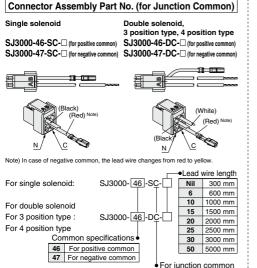

▲Caution

Using the connector assembly (for junction common) for solenoid valves installed in the manifold reduces the labor involved in wiring work because common wiring for all solenoid valves is integrated into a single wire.

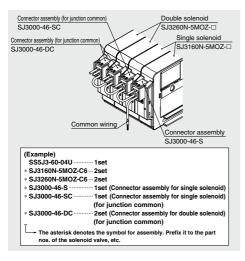

Be sure to read before handling. Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

How to Order

Indicate the part no. of the connector assembly for the manifold and solenoid valve.

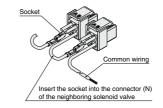

- If the arrangement is complicated, please specify them by means of the manifold specification sheet.
- Note 1) Applications like connectors not wired to a valve is not possible.
- Note 2) For the solenoid valve, please designate "No connector (MOZ)" for the connector type.
- Note 3) Connector assembly with lead wire for place where the signals are transmitted to the common wiring. (Only the valves of first station and/or last station of manifold are compatible to connector with lead wire for common.)

Wiring Instructions for Connector Assembly (for Junction Common)

▲Caution

If only connector assembly (for junction common) is ordered, please wire according to the instructions in the diagram below. For details on socket mounting, please refer to "How to Use Plug Connector" on page 117.

How to Wire to PC Wiring System Compliant Power Supply Terminal

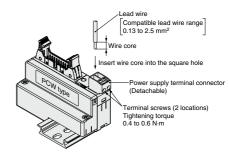

Caution

Wire connection instructions

- 1. Strip 6.5 to 7.5 mm from the tip of the lead wire.
- Loosen the terminal screws (slotted head screws) of the power supply terminal connectors, plug the core wire of the lead wire into the square holes of the connector, tighten terminal screws at the proper torque, and fasten them securely. (Gently pull the lead wire and check that it is fastened.)

Precautions

- To remove the power supply terminal connector, pull it upward as is. When mounting, push it in until it makes a snapping noise.
- When connecting wire, be careful because using lead wire that is outside of compatible lead wire ranges, or that are tightened to anything other than the proper torque, creates a risk of defective contact and other problems.

Be sure to read before handling. Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

One-touch Fittings

≜Caution

When fittings are used, they may interfere with one another depending on their types and sizes. Therefore, the dimensions of the fittings to be used should first be confirmed in their respective catalogs.

Fittings whose compliance with the SJ serise is already confirmed are stated below. If the fitting within the applicable range is selected, there will not be any interference.

Applicable Fittings: Series KQ2H, KQ2S Series KJH, KJS

Series	Model F	Piping port	Port size	Fitting	Applicable tubing O.D.											
Jelles					ø2	ø3.2	ø4	ø6								
SJ3000		J3□60-□□-M5 4A, 2B	M5	KQ2H KJH												
(10 mm pitch)	SJ3_60M5			KQ2S KJS												
SJ2000		4A, 2B	МЗ	KQ2H KJH												
(7.5 mm pitch)	SJ2□60-□□-M3			M3	K	M3	M3	M3	M3	M3	M3		KQ2	KQ2S KJS		
SJ3A6	SJ3A6- □□ 2B		KQ2H KJH													
(10 mm pitch)		2B	M5	M5 KQ2S KJS
