

# 2-Color Display High-Precision Digital Pressure Switch

Series **ZSE40A(F)/ISE40A**

RoHS

IP65

New

M8 connector type

Applicable  
fluid

Air, Non-corrosive gas, Non-flammable gas

Can copy to up to **10** switches simultaneously.

The settings of the master sensor (source of copy) can be copied to the slave sensors.

- Reducing setting labor
- Minimizing risk of mistakes in setting

Easy handling!

Raised rubber switch buttons for easy and comfortable operation

3-step setting

2-color display

See abnormal values at a glance.

### Secret code setting function.....

A function to prevent operation by anyone other than the designated operator while the keys are locked.

An optional 3-digit value is entered.

• The set-value can be checked while the keys are locked.

### Power-saving function.....

The display can be turned off to save the power consumption. (Power consumption reduced by max. 20%)

The value disappears and decimal points start flashing.

### Resolution conversion function.....

The flickering on the display can be eliminated.

1/1000

(Only the displayed value is changed, and there is no effect on the accuracy.)

1/100

### MPa/kPa switching function.....

The indication unit for vacuum, compound pressure and positive pressure can be integrated into either MPa or kPa.

kPa Stick the label (enclosed with the product) of a desired unit seal.

# 2-Color Display High-Precision Digital Pressure Switch Series **ZSE40A(F)/ISE40A**

## How to Order

**Rated pressure range**  
ISE40A -0.1 to 1.000 MPa

For positive pressure

**ISE40A** - 01 - X - M

For vacuum/  
compound pressure

**ZSE40A** - 01 - Y - M

**Rated pressure range**  
ZSE40A 0.0 to -101.3 kPa  
ZSE40AF -100.0 to 100 kPa

**Piping specifications**

Note 1) If the applied pressure fluctuates around the set-value, the hysteresis must be set to a value more than the fluctuating width, otherwise chattering will occur.

Note 2) When the analog voltage output is selected, the analog current output cannot be selected.

Note 3) When the analog current output is selected, the analog voltage output cannot be selected.

Note 4) UL temperature rating: The maximum ambient temperature is 50 $^\circ\text{C}$ .

# Series ZSE40A(F)/ISE40A

## Set Pressure Range and Rated Pressure Range

### Set the pressure within the rated pressure range.

The set pressure range is the range of pressure that is possible in setting.

The rated pressure range is the range of pressure that satisfies the specifications (accuracy, linearity, etc.) on the switch.

Although it is possible to set a value outside the rated pressure range, the specifications will not be guaranteed even if the value stays within the set pressure range.

| Switch                |         | Pressure range |   |         |         |          |
|-----------------------|---------|----------------|---|---------|---------|----------|
|                       |         | -100 kPa       | 0 | 100 kPa | 500 kPa | 1 MPa    |
| For vacuum pressure   | ZSE40A  | -101.3 kPa     | 0 | 10 kPa  |         |          |
|                       |         | -105 kPa       |   |         |         |          |
| For compound pressure | ZSE40AF | -100 kPa       |   | 100 kPa |         |          |
|                       |         | -105 kPa       |   | 105 kPa |         |          |
| For positive pressure | ISE40A  | -100 kPa       |   |         |         | 1 MPa    |
|                       |         | -105 kPa       |   |         |         | 1.05 MPa |
|                       |         | (-0.105 MPa)   |   |         |         |          |

Rated pressure range of switch  
Set pressure range of switch

## Analog Output

### Voltage output

### Current output

| Range                 | Rated pressure range | A          | B          | C          |
|-----------------------|----------------------|------------|------------|------------|
| For vacuum pressure   | 0.0 to -101.3 kPa    | 10.1 kPa   | 0          | -101.3 kPa |
| For compound pressure | -100.0 to 100.0 kPa  | —          | -100.0 kPa | 100.0 kPa  |
| For positive pressure | -0.100 to 1.000 MPa  | -0.100 MPa | 0          | 1.000 MPa  |

The F in ( ) shows the function code number. Refer to the Operation Manual for the details of operation procedures and function codes.

Function Details

A Copy function (F97)

The settings of the master sensor can be copied to the slave sensors, reducing setting labor and minimizing risk of mistakes in setting.

Can copy to up to 10 switches simultaneously.  
(Maximum transmission distance 4 m)

- 1) Wire as shown in the left figure.
- 2) Select the slave switch which is to be the master, and change it into a master using the buttons. (In the default setting, all switches are set as slaves.)
- 3) Press the button of the master switch to start copying.

B Auto-preset function (F4)

Auto-preset function, when selected in the initial setting, calculates and stores the set-value from the measured pressure. The optimum set-value is determined automatically by repeating vacuum and break with the target workpiece several times.

Suction Verification

Formula for Obtaining the Set-Value

| P_1 or P_2                      | H_1 or H_2                   |
|---------------------------------|------------------------------|
| $P_{_1} (P_{_2}) = A - (A-B)/4$ | $H_{_1} (H_{_2}) = (A-B) /2$ |
| $n_{_1} (n_{_2}) = B + (A-B)/4$ |                              |

C Display calibration function (F6)

Fine adjustment of the indicated value of the pressure sensor can be made within the range of  $\pm 5\%$  of the read value. (The scattering of the indicated value can be eliminated.)

Note) When the display calibration function is used, the set pressure value may change  $\pm 1$  digit.

D Peak/Bottom value indication

This function constantly detects and updates the maximum (minimum) value and allows to hold the maximum (minimum) pressure value. When the  $\Delta$   $\nabla$  buttons are simultaneously pressed for 1 second or longer, while "holding", the hold value will be reset.

E Keylock function

Prevents operation errors such as accidentally changing setting values.

F Zero-clear function

This function clears and resets the zero value on the display of measured pressure. For the pressure switch with analog output, the analog output shifts according to the indication. The indicated value can be adjusted within  $\pm 7\%$  F.S. of the pressure when ex-factory. (ZSE40AF (for compound pressure)  $\pm 3.5\%$  F.S.)

# 2-Color Display High-Precision Digital Pressure Switch *Series ZSE40A(F)/ISE40A*

The F□ in ( ) shows the function code number. Refer to the Operation Manual for the details of operation procedures and function codes.

## G Error indication function

| Error name              | Error code | Description  | Action  |
|-------------------------|------------|--|---|
| Overcurrent error       | <i>Er1</i> | Load current of 80 mA or more is applied to the switch output (OUT1).  | Eliminate the cause of the over current by turning off the power supply, and then turn on it again.                         |
|                         | <i>Er2</i> | Load current of 80 mA or more is applied to the switch output (OUT2).  |   |
| Residual pressure error | <i>Er3</i> | During zero-clear operation, pressure over $\pm 7\%$ F.S. is applied. (ZSE40AF (compound) $\pm 3.5\%$ F.S.)<br>After 1 second, the mode will reset to measurement mode. $\pm 1\%$ F.S. of the zero-clear range varies between individual products. | Perform zero-clear operation again after restoring the applied pressure to an atmospheric pressure condition.               |
| Applied pressure error  | <i>HHH</i> | Supply pressure exceeds the maximum set pressure.  | Reset applied pressure to a level within the set pressure range.  |
|                         | <i>LLL</i> | Supply pressure is below the minimum set pressure.   |   |
| Auto-shift error        | <i>or</i>  | The value measured at the time of auto-shift input is outside the set pressure range.<br>* After displaying the error code for about 1 second, the switch returns to the measuring mode.   | The controller does not respond to the auto-shift signal. Check the equipment and machinery for this point.                 |
| System error            | <i>Er0</i> | Internal data error  | Turn off the power supply and then turn on it again. If the failure cannot be solved, please contact SMC for investigation. |
|                         | <i>Er4</i> |  |   |
|                         | <i>Er6</i> |  |   |
|                         | <i>Er7</i> |  |   |
|                         | <i>Er8</i> |  |   |
|                         | <i>Er9</i> |  |   |

If the failure cannot be solved after the above instructions are performed, please contact SMC for investigation.

## H Anti-chattering function (F3)

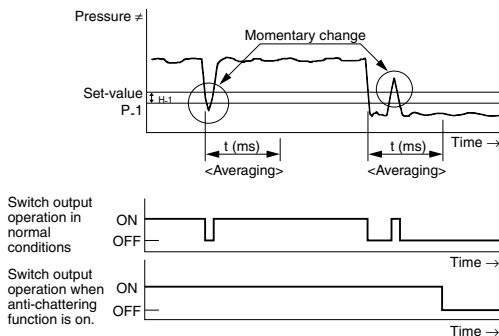

A large bore cylinder or ejector consumes a large volume of air in operation and may experience a temporary drop in the supply pressure. This function prevents detection of such temporary drops in the supply pressure as an error.

Available response time settings

20 ms, 100 ms, 500 ms, 1000 ms, 2000 ms

<Principle>

This function averages pressure values measured during the response time set by the user and then compares the average pressure value with the pressure set point value to output the result on the switch.

## I Display unit switching function (F0)

Display units can be switched with this function.

| Display unit                       | <i>PR</i> |       | <i>GF</i>           | <i>bRr</i> | <i>PS</i> | <i>inH</i> | <i>mmH</i> |
|------------------------------------|-----------|-------|---------------------|------------|-----------|------------|------------|
| Minimum unit setting               | kPa       | MPa*  | kgf/cm <sup>2</sup> | bar        | psi       | inHg       | mmHg       |
| <b>ZSE40A</b> (vacuum pressure)    | 0.1       | 0.001 | 0.001               | 0.001      | 0.01      | 0.1        | 1          |
| <b>ZSE40AF</b> (compound pressure) | 0.1       | 0.001 | 0.001               | 0.001      | 0.02      | 0.1        | 1          |
| <b>ISE40A</b> (positive pressure)  | 1         | 0.001 | 0.01                | 0.01       | 0.1       |            |            |

\* The ZSE40A (vacuum pressure) and ZSE40AF (compound pressure) will have different setting and display resolution when the unit is set to MPa.

Function Details

The F□ in ( ) shows the function code number. Refer to the Operation Manual for the details of operation procedures and function codes.

J Power-saving mode (F80)

Power-saving mode can be selected. It shifts to the power-saving mode without button operation for 30 seconds. It is set to the normal mode (Power-saving mode is OFF.) when ex-factory. (Decimal points and operation indicator light (only when the switch output is turned ON.) blink in the power-saving mode.)

K Setting of secret code (F81)

Users can select whether a secret code must be entered to release key lock. At the time of shipment from the factory, it is set such that the secret code is not required.

L Auto-shift function (F5)

When there are large fluctuations in the supply pressure, the switch may fail to operate correctly. The auto-shift function compensates such supply pressure fluctuations. It measures the pressure at the time of auto-shift signal input and uses it as the reference pressure to correct the set-value on the switch.

Set-value correction by auto-shift function

\* Rectified value  
When the auto-shift is selected, "ooo" will be displayed for about 1 second, and the pressure value at that point will be saved as a rectified value "C.5". Based on the saved rectified values, the set-value <sup>Note)</sup> of "P\_1", "H\_1", "P\_2", and "H\_2" will likewise be rectified.

Note) When an output is reversed, "n\_1", "H\_1", "n\_2", "H\_2" will be rectified.

Settable Range for Auto-Shift Input

|                   | Set pressure range  | Settable range      |
|-------------------|---------------------|---------------------|
| Compound pressure | -105.0 to 105.0 kPa | -210 to 210 kPa     |
| Vacuum pressure   | 10.0 to -105.0 kPa  | 115.0 to -115.0 kPa |
| Positive pressure | -0.105 to 1.050 MPa | -1.155 to 1.155 MPa |

Auto-shift zero

The basic function of auto-shift zero is the same as the function for auto-shift. Also, it corrects values on the display, based on a pressure value of "0", when the auto-shift is selected.

Connection example of auto-shift function
