Compact Cylinder Air Saving Type/Double Force Type

Size: 45, 57, 71

Air saving and more compact! Improvements due to the adoption of a built-in exhaust return circuit and a polygonal piston (new size)

Air saving (Built-in exhaust return circuit)

Air consumption

Max. 46% reduction

- Uses the air exhausted from the extension side to supply the retraction side, thus reusing the air (Built-in exhaust return circuit)

- Reduce air consumption just by piping to the product

Compact (Now with a polygonal piston)

This product is capable of providing double the force of the CQ2 series without changing the width.

Overall length

50% reduction

130.5 mm → 65.3 mm

+1 Compared with the existing model (CDQ2B32-25+0DCZ-XC11 Dual stroke cylinder)

With rubber bumper

Small auto switches can be mounted.

Applicable auto switch: D-M9

Size 45: Mounting on 3 surfaces
Sizes 57, 71: Mounting on 4 surfaces
(For details, refer to the dimensions.)

Mounting orientation: Horizontal lateral, Vertical upward

Min. theoretical Retracting operation
73 N 113 N 177 N

Allowable kinetic energy
0.26 J 0.46 J 0.77 J

Allowable lateral load at rod end (At 25 st)
12.8 N 22.3 N 35.8 N

Mounting Basic type (Through-hole)

stroke length tolerance does not include the amount of bumper change.

Be aware that the cylinder output is reduced during the retraction operation.
The cylinder output values in the table above are the min. values. Therefore, depending on the operating conditions, the output may be greater.

Please contact your local sales representative for more details.

Depending on the system configuration selected, the specified speed may not be satisfied.

Maximum operating pressure and piston speed are different from the existing product (CQ2 series).

For sizes 45 and 57, the positions of the switch mounting grooves vary slightly from those of the polygonal piston standard type.

Handling

⚠️ Warning

1. Residual pressure will remain in the exhaust return piping of this circuit.
   To completely exhaust all of the residual pressure, install a 3-port valve for residual pressure exhaust in the exhaust return piping.
2. The adjustment range for the throttle valve for retraction operation speed adjustment is, starting from the fully closed position, within the number of rotations shown in the table below.

<table>
<thead>
<tr>
<th>Bore size [mm]</th>
<th>Number of rotations</th>
</tr>
</thead>
<tbody>
<tr>
<td>45, 57, 71</td>
<td>3 rotations</td>
</tr>
</tbody>
</table>

To adjust the throttle valve, use a 3 mm flat head watchmaker’s screwdriver.
The adjustment range for the throttle valve is, between the fully closed position and the open position, within the range indicated in the table above.
A retaining mechanism prevents the throttle valve from slipping out; however, it may spring out during operation if it is rotated beyond the range shown above.

⚠️ Caution

1. Pipe according to the circuit diagram shown below when using this cylinder.

![Circuit diagram](image)

2. For exhaust return, the selection and installation of suitable fittings, tubes, and devices is required. Please contact your local sales representative for more details.
3. For the solenoid valve, select a single unit (body ported or base ported) external pilot type.
4. Follow the instructions below to adjust the speed of this cylinder.
   - Extending operation: Use the speed controller (meter-in) installed between the extension port and the solenoid valve.
   - Retracting operation: Use the built-in throttle valve on the cylinder.
5. As the retracting operation of this cylinder is performed with low pressure and low thrust, refrain from applying more external force than necessary.
6. Pivot brackets cannot be used.

⚠️ Safety Instructions

Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and the “CO2 Series Specific Product Precautions” before use.
