Fan Type Ionizer

Thinnest and Fastest

Thickness 40 mm
Rapid static neutralization 0.5 seconds

- Extensive rapid static neutralization
- Offset voltage (Ion balance): ±5 V

IZF Series

New The model with flow rate adjustment function added.

IZF10R Series

RoHS

CAT.ES100-113B
Extensive Rapid Static Neutralization

Extensive static neutralization  

For the IZF21. For details about the IZF31, refer to page 10. Refer to page 4 for flow rate adjustment and the description below for angle adjustment of the adjustable louver.

Extensive static neutralization area can be covered with adjustable louver.

Angle adjustment trimmer for adjustable louver

Adjustable in 5-stages from wide to narrow angle

90-degree rotation mounting available (Adjustable in a vertical direction)

Application Examples

Extensive static neutralization at close range

Long range static neutralization
Rapid static neutralization

Installation distance and discharge time (Discharge time from 1000 V to 100 V)

- **IZF21**
  - Air flow level: 1
  - Air flow level: 10
- **IZF31**
  - Air flow level: 1
  - Air flow level: 10
- **IZF10R**
  - Air flow level: 1
  - Air flow level: 4

Stable Static Neutralization Performance, Easier Maintenance

Emitter life is almost doubled with averaging function.

- **Averaging Function**
  - The life of the emitters is almost doubled by switching the polarity of the applied high voltage every time the power is supplied hence averaging the wear level of the emitters.
  - *Compared with the IZF10.*

Built-in sensor constantly monitors offset voltage.

- **Automatic balance adjustment function** achieves stable offset voltage and reduces adjustment time.

- Constantly monitors offset voltage by use of a sensor. Prevents degradation in offset voltage that can occur when emitters become contaminated after prolonged ionizer operation. Balance adjustment trimmer can provide offset voltage adjustment suitable for the installation environment.
Stable Static Neutralization Performance, Easier Maintenance

Emitter contamination can be reduced by automatic cleaning function. [IZF 21  IZF 31] Option [P.12]

Cleaning arms are installed inside the housing. Emitter cleaning is started by an external input signal or push-button operation.

Contamination of the emitters can be detected. [IZF 10  IZF 10R  IZF 21  IZF 31]

Emitter contamination level is constantly monitored. When maintenance is required, the user is alerted by a signal output and the LED turning ON.

Emitter cartridge is easily replaceable. (No tools are required.) [IZF 21  IZF 31] P.12

Emitter cartridge drop prevention

Related equipment P.12

Cleaning kit IZS30-M2

Emitter cartridge retaining screw M3 x 12 1 pc. (Provided by customer)
Flow Rate Adjustment Function

Flow rate is adjustable in 10 steps* using the flow rate adjustment dial. The flow rate adjustment dial is removable to prevent accidental changes of adjustment.

Flow Rate Adjustment Range

7 types of alarms are provided.

1. Power supply failure
2. Incorrect high voltage
3. Fan motor failure
4. CPU failure
5. Maintenance warning
6. Emitter cartridge mounting failure
7. Automatic cleaning failure

LED indicator can be checked from 2 directions!

Filter

Prevents ingress of lint and foreign matter to the motor and possibility of short-circuit between emitters!

Application Examples

**Static neutralization on a conveyor**
Static neutralization in a narrow space

**Neutralizing static electricity on PET bottles**
Trip-resistance during conveying/Prevents adhesion of dust.

**Neutralizing static electricity from films**
Prevents winding failure./Prevents adhesion of dust.

**Neutralizing static electricity on molded goods**
Improves detachability of molded goods from a die.

**Neutralizing static electricity on film molded goods**
Sticking and scattering prevention on a conveyor

**Static neutralization on packaging materials made from polystyrene foam**
Darkening due to dust adhesion prevented

**Neutralizing static electricity from packing films**
Prevents the filled substance from adhering to the packing film and reduces packing mistakes.

**Neutralizing static electricity from parts feeder**
Prevents clogging.

**Neutralizing static electricity on an electric substrate**
Prevents failures due to ESD and adhesion of dust.

---

**Compact fan type with simple functions IZF10/10R Series**

- Compact design (Depth x Width x Height): 39 mm x 80 mm x 110 mm
- Weight: 280 g (IZF10), 260 g (IZF10R)
- 2 types of fans available (IZF10)
  - Rapid static neutralizing fan: Discharge time (Static neutralization time)*
    1.5 s (When neutralizing static electricity from 1000 V to 100 V at a distance of 300 mm from the workpiece (front surface))
  - Low-noise fan: 48 dB(A) (Measured at a distance of 300 mm from the workpiece),
    Rapid static neutralizing fan: 57 dB(A)
- Offset voltage (Ion balance)*: ±13 V
- With alarms for
  - Incorrect high voltage, Maintenance warning
- With flow rate adjustment function (IZF10R)

* Based on ANSI/ESD-STM3.1-2006 standards

</table>

*1: Incorrect high voltage, fan motor failure, and maintenance warning can also be released by the ionizer stop signal after resolving the error.
*2: Fan rotation stops gradually because of its rotational inertia.
*3: Ensure the power supply is turned off before cleaning errors or cleaning emitters. If an alarm continues to be generated even after cleaning, the emitters may be worn out or damaged. If wear or damage to the emitters is detected, replace the emitter cartridge with a new one.
*4: The cleaning time is approximately 2 seconds.

*1: Incorrect high voltage, fan motor failure, and maintenance warning can also be released by the ionizer stop signal after resolving the error.
*2: Fan rotation stops gradually because of its rotational inertia.
*3: Ensure the power supply is turned off before cleaning errors or cleaning emitters. If an alarm continues to be generated even after cleaning, the emitters may be worn out or damaged. If wear or damage to the emitters is detected, replace the emitter cartridge with a new one.
*4: The cleaning time is approximately 2 seconds.

**AC adapter**
IZF21-CG1 (with AC cord)

![Diagram of IZF21-CG1 AC adapter with AC cord]

IZF21-CG2 (without AC cord)

![Diagram of IZF21-CG2 AC adapter without AC cord]

*: The input (AC) side and output (DC) side of the AC adapter are not isolated.
If using the AC adapter as DC power supply for a different product, this may cause electric shock or malfunction.
Do not use the AC adapter for the DC power supply of a different product.

*1: Fan motor rotation does not stop immediately due to inertial force even when the power supply is OFF.
*2: Cleaning or replacing the emitters should never be performed with the power supply ON. If an alarm continues to be generated even after cleaning, the emitters may be worn out or damaged. If wear or damage to the emitters is detected, replace the emitter cartridge with a new one.
*3: When excessive current flows to the output signal, the signal will be turned OFF to protect the output circuit.

**Precautions for use in a clean room**

When using in a clean room environment, confirm the required cleanliness before use. Fine particles are generated due to wear of emitters and motor sliding during operation.

*: AC cord is only for use in Japan. (Rated voltage 125 V, Plug JIS C8303, Inlet IEC60320-C8)

External output cannot be used when the AC adapter is being used.
## IZF Series

### Specific Product Precautions 1

Be sure to read this before handling the products. Refer to the back cover for Safety Instructions.

### Warning

1. **This product is intended to be used with general factory automation (FA) equipment.**
   
   If considering using the product for other applications (especially those stipulated on Safety Instructions), please consult SMC beforehand.

2. **Use this product within the specified voltage and temperature range.**
   
   Using outside of the specified voltage can cause a malfunction, damage, electrical shock, or fire.

3. **This product is not explosion-protected.**
   
   Never use this product in locations where the explosion of dust is likely to occur or flammable or explosive gases are used. This can cause a fire.

### Caution

1. **Clean specification is not available with this product.**
   
   When using in a clean room environment, confirm the required cleanliness before use. Fine particles are generated due to wear of emitters and motor sliding during operation.

### Warning

1. **Ensure the power supply is removed before installing and adjusting the product.**
   
   Failure to do this may cause product malfunction.

2. **Mounting**

   1. **Provide sufficient space on the air intake side of this product.**
      
      This product ventilates with a fan motor. If there are obstacles such as a wall on the air suction side of the product, the ventilation will be obstructed, decreasing the performance. Install the ionizer so that the air suction side of the product is at least 20 mm (for IZF10, IZF10R, IZF21) or 30 mm (for IZF31) away from any obstacles.

   2. **Make sure to confirm the effect of static neutralization after installation.**
      
      The effects vary depending on the ambient conditions, operating conditions, etc. After installation, verify the effects of static neutralization.

   3. **When installing ionizers which operate in DC mode (one polarity, positive or negative) close together, they should be positioned at least 2 m away from each other. (IZF21/IZF31)**
      
      When an ionizer is used close to the ionizer which operates in DC mode, separate them by at least 2 m. The offset voltage (ion balance) may not be adjusted by the built-in sensor due to the ions discharged from the ionizer which operates in DC mode.

   4. **Do not apply an excessive force to the finger guard.**
      
      If an excessive external force is applied to the finger guard (including the filter holder) on the air suction side of the product, it may be broken. Do not apply an external force of 50 N or more to the finger guard.

### Caution

1. **Selection**

   1. **Avoid using in a place where noise (electromagnetic wave and surge) is generated.**
      
      If the product is used in an environment where noise is generated, it may lead to deterioration or damage of the internal elements. Take measures to prevent noise at its source and avoid power and signal lines from coming into close contact.

   2. **Avoid using in a place where noise (electromagnetic wave and surge) is generated.**
      
      If the product is used in an environment where noise is generated, it may lead to deterioration or damage of the internal elements. Take measures to prevent noise at its source and avoid power and signal lines from coming into close contact.

   3. **Avoid using in a place where noise (electromagnetic wave and surge) is generated.**
      
      If the product is used in an environment where noise is generated, it may lead to deterioration or damage of the internal elements. Take measures to prevent noise at its source and avoid power and signal lines from coming into close contact.

   4. **Avoid using in a place where noise (electromagnetic wave and surge) is generated.**
      
      If the product is used in an environment where noise is generated, it may lead to deterioration or damage of the internal elements. Take measures to prevent noise at its source and avoid power and signal lines from coming into close contact.

### Caution

1. **Use the correct tightening torque.**

   If the screws are tightened in excess of the specified torque range, it may damage the mounting screws, mounting brackets, etc. If the tightening torque is insufficient, the mounting screws and brackets may become loose.

2. **Do not apply tape or stickers to the product body.**

   If a tape or seal contains any conductive adhesive or reflective paint, a dielectric phenomenon may occur due to the generated ions, resulting in electrostatic charge or electric leakage. Avoid using such tape and seals as it will not only cause difficulties in maintaining the performance of the product, but may also result in the failure of the product.

3. **Ensure the power supply is removed before installing and adjusting the product.**

4. **Ensure the safety of wiring and surrounding conditions before supplying power.**

5. **Do not connect or disconnect the connectors (including power source) while the power is supplied.**

6. **If the ionizer wiring and high power lines are routed together, this product may malfunction due to noise.**

7. **Confirm that the wiring is correct before operation.**

   Incorrect wiring will lead to product damage or malfunction.
IZF Series
Specific Product Precautions 2
Be sure to read this before handling the products. Refer to the back cover for Safety Instructions.

### Operating Environment/ Storage Environment

**Warning**

1. **Keep within the specified ambient temperature range.**
   The specified ambient temperature range for ionizer is 0 to 50°C, and for AC adapter is 0 to 40°C. Avoid sudden temperature changes even within specified ambient temperature range, as it may cause condensation.

2. **Do not use this product in an enclosed space.**
   This product utilizes a corona discharge phenomenon. Do not use the product in an enclosed space as ozone and nitrogen oxides exist in such places, even though in marginal quantities.

3. **Environments to avoid**
   - Never use or store under the following conditions. These may cause a failure, fire, etc.
     a. Where the ambient temperature exceeds the operating temperature range.
     b. Where the ambient humidity exceeds the operating humidity range.
     c. Areas where abrupt temperature changes may cause condensation.
     d. Areas where corrosive gas, flammable gas or other volatile flammable substances are stored.
     e. Areas where the product may be exposed to conductive powder such as iron powder or dust, oil mist, salt, organic solvent, machining chips, particles or cutting oil (including water and any liquids), etc.
     f. Paths of direct air flow, such as air conditioners.
     g. Enclosed or poorly ventilated areas.
     h. Locations that are exposed to direct sunlight or heat radiation.
     i. Areas where strong electromagnetic noise is generated, such as strong electrical and magnetic fields or supply voltage spikes.
     j. Areas where the product is exposed to static electricity discharge.
     k. Locations where strong high frequency is generated.
     l. Locations that are subject to potential lightning strikes.
     m. In an area where the product may receive direct impact or vibration.
     n. Areas where the product may be subjected to forces or weight that could cause physical deformation.

4. **The product does not incorporate protection against lightning surges.** (IZF10, IZF10R)

5. **Effects on implantable medical devices**
   - The electromagnetic waves emitted from this product may interfere with implantable medical devices such as cardiac pacemakers and cardioverter defibrillators, resulting in the malfunction of the medical device or other adverse effects. Please use extreme caution when operating equipment which may have an adverse effect on your implantable medical device. Be sure to thoroughly read the precautions stated in the catalog, operation manual, etc., of your implantable medical device, or contact the manufacturer directly for further details on what types of equipment need to be avoided.

### Maintenance

**Warning**

1. **Perform maintenance regularly and clean the emitters.**
   It is recommended to perform maintenance every week or when the maintenance warning function turns ON. Check regularly if the product is operating with undetected failures or not. The maintenance must be performed by an operator who has sufficient knowledge and experience. If the product is used for an extended period with dust present on the emitters, the product performance will be reduced. If the emitter becomes worn and the product performance is not restored after cleaning, replace the cartridge case.

2. **Cleaning or replacing the emitters should never be performed while the power is supplied to the product.**
   The fan will rotate due to inertial force even when the power supply is OFF. Confirm that the fan does not move before performing cleaning or replacing the emitters. Never perform cleaning or replacing the emitters when the fan motor is rotating. The fan rotation may cause injury. Never touch the electrodes with the power supplied to this product. Electric shock may cause injury.

3. **Do not disassemble or modify the product.**
   Disassembling or modifying the product may cause accidents such as electric shock, failure or fire. The product will not be guaranteed if it is disassembled and/or modified.

4. **Do not operate the product with wet hands.**
   Never operate the product with wet hands. It may cause electric shock or other accidents.

**Danger High Voltage**

This product contains a high-voltage generation circuit. When performing maintenance inspection, be sure to confirm that the power supply to the ionizer is turned off. Never disassemble or modify the ionizer, as this may not only impair the product’s functionality but could cause an electric shock or electric leakage.

**Caution**

1. **Do not drop, hit or apply excessive shock (100 m/s² or more) to the product when handling it.**
   Even if the body appears undamaged, the internal components may be damaged, leading to a malfunction.
Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\(^1\), and other safety regulations.

\(^1\) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines.
(Part 1: General requirements).
ISO 10218-1: Manipulating industrial robots – Safety.

**Caution**

- Indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.
- Indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.
- Indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

**Warning**

- Indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.
- Indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.
- Indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

**Danger**

- Indicates a hazard with a high level of risk which, if not avoided, could result in death or serious injury.

### Safety Instructions

#### 1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

#### 2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

#### 3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

#### 4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

### Caution

#### 1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

#### Limited warranty and Disclaimer

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”. Read and accept them before using the product.

### Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

### Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

### Limited warranty and Disclaimer

#### 1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\(^2\)

Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

#### 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.

This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

#### 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

\(^2\) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.
