3-Color Display
Digital Flow Switch

Applicable fluid: Dry air, N2

3-color/2-screen display*1

+1 2-row display of main screen and sub screen

Instantaneous flow rate (Main screen)
Set value (Sub screen)

Expanded flow range
Wide range of flow measurement with one product

Flow ratio*2 100:1

+2 Rated flow ratio is 10 : 1 for the current PF2A.

Appears to monitor remote lines

Accumulated value
18400,

Peak/Bottom value
H: 1600,

Line name
SMC_PF
3-Color Display | Digital Flow Switch

**PFMC Series p. 7**

### Rotation Display

Display can be rotated in increments of 45° to suit the installation conditions. Easy operation, improved visibility.

- **Counterclockwise 90°**
- **Clockwise 225°**

### Functions

(Refer to pages 19 and 20 for details.)

- Output operation
- Display color
- Reference condition
- Display mode
- Response time
- External input function
- Forced output function
- Accumulated value hold
- Selection of display on sub screen
- Display OFF mode
- Setting of security code
- Peak/Bottom value display
- Keylock function
- Analog output free range function
- Error display function

### Bypass Structure

Bypass structure with protruding part at the main piping, reduces the contact of moist air with the sensor, reducing degradation of the sensor and maintaining accuracy.

### Response Time

Can be selected from 50 ms (0.05 s) / 0.1 s / 0.5 s / 1.0 s / 2.0 s

Grease-free

Response time can be set depending on application.

### Applications

- **Flow control of equipment, main line and branch line**
  - Remote control is possible with accumulated pulse.

- **Accumulated indication shows the operating flow rate or residual amount (of N₂, etc.) in a gas cylinder.**

- **Flow control of the air for spray painting**
  - The product is not designed to be explosion proof.

**Example of recommended pneumatic circuit**

- Compressed air line
  - Air dryer IDF/IDU
  - Air filter AF
  - Regulator AR
  - Micro mist separator AMD/AFD
  - Flow switch PFMC

### Digital Flow Switch to Save Energy!

Flow control is necessary for promoting energy saving in any application.

Saving energy starts from numerical control of the flow consumption of equipment and lines and clarification of the purpose and effect.

- Digital display allows visualization.
- 3-color/2-screen display, Improved visibility
- Remote control is possible with accumulated pulse.
The sub screen (label) shows the item to be set. It is possible to change the settings while checking the measured value. When the S button is pressed and the set value (P_1) is being displayed, the set value (threshold value) can be set. When the S button is pressed and the hysteresis (H_1) is being displayed, the hysteresis value can be set.

Visualization of Settings

The sub screen can be switched by pressing the up/down buttons. The sub screen can be switched by pressing the up/down buttons.

Easy Screen Switching

It is possible to change the settings while checking the measured value.

Simple 3-Step Setting

When the S button is pressed and the set value (P_1) is being displayed, the set value (threshold value) can be set. When the S button is pressed and the hysteresis (H_1) is being displayed, the hysteresis value can be set.

With a snap shot function for set value reading

Pressing the and buttons simultaneously for a minimum of 1 second will make the set value (threshold value) the same as the current flow value.
**NPN/PNP Switch Function**
The number of stock items can be reduced.

<table>
<thead>
<tr>
<th>Voltage output</th>

<th>Switchable</th>
<th>0 to 10 V</th>
</tr>
</thead>
<tbody>
<tr>
<td>Current output</td>
<td>4 to 20 mA</td>
<td>Fixed</td>
<td></td>
</tr>
</tbody>
</table>

**Analog output of 0 to 10 V is also available.**

**Convenient Functions**

- **Copy function**
The settings of the master monitor can be copied to the slave monitors.

- **Secret code setting function**
The key locking function keeps unauthorized persons from tampering with the settings.

- **Power-saving function**
Power consumption is reduced by turning off the monitor.

**Compact & Lightweight**

- **Compact:** Max. 6 mm shorter
- **Lightweight:** Max. 5 g lighter (30 g → 25 g)

**Functions (Refer to pages 21 to 23 for details.)**

- Output operation
- Simple setting mode
- Display color
- Delay time setting
- Digital filter setting
- FUNC output switching function
- Selectable analog output function
- External input function
- Forced output function
- Accumulated value hold
- Peak/Bottom value display
- Setting of security code
- Keylock function
- Reset to the default settings
- Error display function
- Copy function
- Selection of power-saving mode

**Mounting**
Bracket configuration allows for mounting in four orientations.

- **Bracket A**
- **Bracket B**
- **Panel mount**
  Mountable side by side without clearance
  **One opening!**
  - Reduced panel fitting labor
  - Space saving

### Specifications

#### Fluid

<table>
<thead>
<tr>
<th>Model</th>
<th>PFMC7501</th>
<th>PFMC7102</th>
<th>PFMC7202</th>
</tr>
</thead>
<tbody>
<tr>
<td>Applicable fluid</td>
<td>Dry air, N₂</td>
<td>(Air quality grade is JIS B 8392-1.1-1 to 1.6.2, ISO 8573-1 1.1.2 to 1.6.2.)</td>
<td></td>
</tr>
</tbody>
</table>

#### Flow

- **Detection method**: Thermal type
- **Rated flow range**: 0 to 1000 L/min
- **Accumulated flow**: 0 to 999,999,999 L
- **Smallest detectable flow**: 1 L/min
- **Accumulated flow per pulse (Pulse width = 50 ms)**: 1 L/pulse or 10 L/pulse

#### Pressure

- **Rated pressure range**: 0 to 0.8 MPa
- **Proof pressure**: 1.2 MPa
- **Pressure loss**: Refer to "Pressure Loss" graph.
- **Pressure characteristics**: ±5% F.S. (0 to 0.8 MPa, 0.6 MPa standard)

#### Electrical

- **Power supply voltage**: 12 to 24 VDC ±10%
- **Current consumption**: 55 mA or less
- **Protection**: Polarly protection
- **Display accuracy**: ±2% F.S.
- **Analog output accuracy**: ±3% F.S.
- **Repeatability**: ±1% F.S. (±2% F.S. when response time is set to 0.05 s)

#### Accuracy

- **Temperature characteristics**: ±5% F.S. (0 to 50°C, 25°C standard)
- **Accuracy**: ≤3% F.S. when response time is set to 0.05 s
- **Hysteresis**: Select from 0.05 s, 0.1 s, 0.5 s, 1 s, or 2 s
- **Response time**: Select from Hysteresis, Window comparator, Accumulated output or Accumulated pulse output modes.

#### Switch output

- **Voltage output**: 1 to 5 V, Current output: 4 to 20 mA
- **Max. load current**: 80 mA
- **Max. applied voltage (NPN only)**: 28 VDC
- **Internal voltage drop**: NPN output type: 1 V or less (at load current of 80 mA)
- **Residual voltage**: NPN type: 1.5 V or less (at load current of 80 mA)
- **Hysteresis**: Variable from 0
- **Response time**: Linked with the response time of the switch output.

#### Display

- **Reference condition**: Select from Standard condition or Normal condition.
- **Unit**: L/min, cm³/r (min⁻¹)
- **Display range**: Instantaneous flow L/min, Instantaneous flow L/min
- **Minimum display unit**: 1 L/min
- **Accumulated flow**: 0 to 999,999,999 L
- **Accumulated flow unit**: 10 L
- **Display**: LCD, 2-screen display (Main screen/Sub screen)
- **Indicator LED**: LED ON when switch output is ON, (OUT1/OUT2: Orange)

#### Environment

- **Enclosure**: IP65
- **Withstand voltage**: 250 VAC for 1 min between terminals and housing
- **Insulation resistance**: 2 MΩ or more (50 VDC measured via megohmmeter) between terminals and housing
- **Operating temperature range**: Operating: 0 to 50°C, Stored: –10 to 60°C (No condensation or freezing)

#### Standards

<table>
<thead>
<tr>
<th>Piping specification</th>
<th>Rc1/2, NPT1/2, G1/2</th>
<th>Rc3/4, NPT3/4, G3/4</th>
</tr>
</thead>
<tbody>
<tr>
<td>Materials of parts in contact with fluid</td>
<td>Stainless steel 304, PPS, Aluminum alloy, HNBR, Si, Au, GE4F</td>
<td></td>
</tr>
</tbody>
</table>

#### Weight

- **Piping specification**: NPT thread G thread
- **Lead wire**: 50 g
- **Bracket**: 30g

---

*1 When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum access limit of the memory device is 1 million times. If the product is operated 24 hours per day, the product life will be as follows:
- **5 min interval**: life is calculated as 5 min x 1 million = 5 million min = 9.5 years
- **2 min interval**: life is calculated as 2 min x 1 million = 2 million min = 3.8 years
If the accumulated value external reset is repeatedly used, the product life will be shorter than the calculated life.

*2 Do not release the DIP switch or open the product directly to the atmosphere without connecting piping. If the product is used with the piping port released to atmosphere, accuracy may vary.

*3 The time from when the flow is changed by a step input (when the flow rate changes from 0 to the maximum flow instantly) until the switch output turns ON (or OFF) when set at 90% of the rated flow rate.

*4 If the flow fluctuates around the set value, be sure to keep a sufficient margin.

---

*5 Setting is only possible for models with analog output.

*6 The time from when the flow is changed as a step input (when the flow rate changes from 0 to the maximum flow instantly) until the analog output reaches 90% of the rated flow rate.

*7 Setting is only possible for models with external input.

*8 The flow rate given in the specification is the value at standard condition.

*9 Setting is only possible for models with external input.

*10 The accumulated flow display is the upper 3-digit and lower 6-digit (total of 9 digits) display. The position of the dots on the upper part of the screen indicates which digits are displayed.

*11 Withstand voltage for 1 min between terminals and housing.

*12 The flow rate given in the specification is the value at standard condition.

*13 Protection: Polarly protection.

*14 Display accuracy: ±1% F.S. (±2% F.S. when response time is set to 0.05 s)

*15 Response time: Select from Hysteresis, Window comparator, Accumulated output or Accumulated pulse output modes.

*16 Protection: Polarly protection.

*17 Response time: Select from Hysteresis, Window comparator, Accumulated output or Accumulated pulse output modes.

*18 Switch operation: Select from Normal or Reversed output.

*19 Display: LCD, 2-screen display (Main screen/Sub screen)

*20 Indicator LED: LED ON when switch output is ON, (OUT1/OUT2: Orange)

*21 Environment: Operating temperature range: Operating: 0 to 50°C, Stored: –10 to 60°C (No condensation or freezing)

*22 Specifications: Piping specification: Rc1/2, NPT1/2, G1/2, R1/2, NPT3/4, G3/4

*23 Materials of parts in contact with fluid: Stainless steel 304, PPS, Aluminum alloy, HNBR, Si, Au, GE4F

---

Refer to the Web Catalog for flow switch precautions. For details on the specific product precautions, refer to the "Operation Manual" on the SMC website. Click here for details.

Pressure Loss (Reference Data)

IN Side Straight Piping Length and Accuracy (Reference Data)

• The piping on the IN side must have a straight section of piping with a length of 8 cm or more. If a straight section of piping is not installed, the accuracy can vary by approximately ±2% F.S.

• "Straight section" means a part of the piping without any bends or rapid changes in the cross sectional area.

• When the PFMC7501 or 7102 is connected to tubing, use a tube I.D. 9 mm or more just before the product. The accuracy can vary by approximately ±2% F.S. when such tubing is not used.

### How to Order

**PFG 3 0 0 – RT – M – L**

#### Option 1

**Symbol**  | **Description**  | **Note**
---|---|---
Nil | Without lead wire |  
L | Power supply/output connection lead wire (Lead wire length: 2 m) | ZS-46-5L

#### Option 2

**Symbol**  | **Description**  | **Note**
---|---|---
Nil | None |  
A1 | Bracket A (Vertical mounting) | ZS-46-A1
A2 | Bracket B (Horizontal mounting) | ZS-46-A2
B | Panel mount adapter | ZS-46-B
D | Panel mount adapter + Front protection cover | ZS-46-D

#### Option 3

**Nil**  | **Operation manual**  | **Calibration certificate**
---|---|---
| | |  
| | |  
| | |  
| | |  

#### Option 4

**Nil**  | **Sensor connector**
---|---
| ZS-28-CA-4

---

### Input specification

- **Symbol**
  - 0: Voltage input
  - 1: Current input

- **Applicable flow switch model**
  - PFMC7C—C/E series
  - PFMC7C—D/F series

### Output specification

- **Symbol**
  - RT: 2 outputs (NPN/PNP switching type) + Analog voltage output
  - SV: 2 outputs (NPN/PNP switching type) + Analog current output
  - XY: 2 outputs (NPN/PNP switching type) + Copy function

#### Note

- Can switch between 1 to 5 V and 0 to 10 V
- Can be switched to external input or copy function

### Unit specification

- **Symbol**
  - Nil: None
  - M: SI unit only

- **Units selection function**
  - 1: Can switch between 1 to 5 V and 0 to 10 V
  - 2: Can be switched to external input or copy function

---

### Options/Part Nos.

When only optional parts are required, order with the part numbers listed below.

<table>

---

1. Rated flow range of the applicable flow switch
2. Value without digital filter (at 0.00 s)
3. When using the accumulated value hold function, use the operating conditions to calculate the product life, and do not exceed it. The maximum access limit of the memory device is 1.5 million times. If the product is operated 24 hours per day, the product life will be as follows: 5 min interval: life is calculated as 5 min x 1.5 million = 7.5 million min = 14.3 years 2 min interval: life is calculated as 2 min x 1.5 million = 3 million min = 5.7 years
4. If the flow fluctuates around the set value, be sure to keep a sufficient margin. Otherwise, chattering will occur.
5. Setting is only possible for models with analog output.
6. Setting is only possible for models with external input.
7. Setting is only possible for models with the units selection function.
8. The response time indicates when the set value is 90% in relation to the step input.
9. The accumulated flow display is the upper 6-digit and lower 6-digit (total of 12 digits) display. When the upper digits are displayed, x 106 lights up.
10. Products with tiny scratches, smears, or display color or brightness variations which do not affect the performance of the product are verified as conforming products.

### Output operation
The output operation can be selected from the following:
- Output (hysteresis mode and window comparator mode) corresponding to instantaneous flow or output (accumulated output and pulse output) corresponding to accumulated flow.

* At the time of shipment from the factory, it is set to hysteresis mode and normal output.

### Display color
The display color can be selected for each output condition. The selection of the display color provides visual identification of abnormal values. (The display color depends on OUT1 setting.)

### Reference condition
The display unit can be selected from standard condition or normal condition.

- **Standard condition**: Flow rate converted to a volume at 20°C and 1 atm (atmosphere)
- **Normal condition**: Flow rate converted to a volume at 0°C and 1 atm (atmosphere)

### Display mode
The display mode can be selected from instantaneous flow or accumulated flow.

### Response time
The response time can be selected to suit the application. (Default setting: 1 s)

- Abnormalities can be detected more quickly by setting the response time to 0.05 seconds.
- The effect of fluctuation and flickering of the display can be reduced by setting the response time to 2 seconds.

### Selection of display on sub screen
The display on the sub screen in measuring mode can be set.

<table>
<thead>
<tr>
<th>Display</th>
<th>Sub screen</th>
</tr>
</thead>
<tbody>
<tr>
<td>Set value display</td>
<td>Displays the set value (The set value of OUT2 cannot be displayed.)</td>
</tr>
<tr>

</tr>
<tr>
<td>Line name display</td>
<td>Displays the line name (Up to 6 alphanumeric characters can be input.)</td>
</tr>
<tr>
<td>OFF</td>
<td>Displays nothing</td>
</tr>
</tbody>
</table>

### Display OFF mode
This function will turn the display OFF. In this mode, decimal points flash on the main screen. If any button is pressed during this mode, the display reverts to normal for 30 seconds to allow checking of the flow, etc.

### Setting of security code
The user can select whether a security code must be entered to release the key lock. At the time of shipment from the factory, it is set such that a security code is not required.

### External input function
This function can be used only when the optional external input is present. The accumulated flow, peak value, and bottom value can be reset remotely.

- **Accumulated value external reset**: A function to reset the accumulated flow value when an external input signal is applied.
  - In accumulated increment mode, the accumulated value will reset to and increase from zero.
  - In accumulated decrement mode, the accumulated value will reset to and decrease from the set value.

### Forced output function
The output is turned on/off in a fixed state when starting the system or during maintenance. This enables the confirmation of wiring and prevents system errors due to unexpected output.

- For the analog output type, when ON the output will be 5 V or 20 mA, and when OFF, it will be 1 V or 4 mA.

### Accumulated value hold
The accumulated value is not cleared even when the power supply is turned off.

- The accumulated value is memorized every 2 or 5 minutes during measurement and continues from the last memorized value when the power supply is turned on again.
- The life time of the memory device is 1 million access times. Take this into consideration before using this function.

### Display OFF mode
This function allows the display OFF. In this mode, decimal points flash on the main screen. If any button is pressed during this mode, the display reverts to normal for 30 seconds to allow checking of the flow, etc.

### Peak/Bottom value display
The maximum (minimum) flow rate is detected and updated from when the power supply is turned on. In peak (bottom) value display mode, this maximum (minimum) flow rate is displayed.

### Keylock function
Prevents operation errors such as accidentally changing setting values.
### Analog output free range function

This function allows a flow that generates an output of 5 V or 20 mA to be changed. The value can be changed between 10% of the maximum value of the rated flow and the maximum value of the display range.

![Diagram showing analog output range](image)

### Error display function

When an error or abnormality arises, the location and contents are displayed.

<table>

</tr>
</tbody>
</table>

If the error cannot be solved after the above instructions are performed, please contact SMC for investigation.
**PFG300 Series**

**Function Details**

- **Output operation**
  - The output operation can be selected from the following:
    - Output (hysteresis mode and window comparator mode) corresponding to instantaneous flow or output (accumulated output and pulse output) corresponding to accumulated flow.
  - (Default setting: Hysteresis mode, Normal output)

- **Simple setting mode**
  - Only the set values for instantaneous flow and accumulated flow can be changed. Output mode, output type, display color, and accumulate pulse output cannot be changed.

- **Display color**
  - The display color can be selected for each output condition. The selection of the display color provides visual identification of abnormal values.
  - Red for ON, Green for OFF
  - Red for ON, Green for OFF
  - Red all the time
  - Green all the time

- **Delay time setting**
  - The time from when the instantaneous flow reaches the set value to when the switch output operates can be set. Setting the delay time can prevent the switch output from chattering.
  - (Default setting: 0 s)

- **Digital filter setting**
  - The time for the digital filter can be set to the sensor input. Setting the digital filter can reduce chattering of the switch output and flickering of the analog output and the display.
  - The response time indicates when the set value is 90% in relation to the step input.
  - (Default setting: 0 s)

- **FUNC output switching function**
  - Analog output, external input, or copy function can be selected.
  - (Default setting: Analog output)

- **Selectable analog output function**
  - 1 to 5 V or 0 to 10 V can be selected for the analog voltage output type.
  - (Default setting: 1 to 5 V)

- **External input function**
  - The accumulated flow, peak value, and bottom value can be reset remotely.
  - **Accumulated value external reset**: A function to reset the accumulated flow value when an external input signal is applied.
    - In accumulated increment mode, the accumulated value will reset to and increase from zero.
    - In accumulated decrement mode, the accumulated value will reset to and decrease from the set value.
  - When the accumulated value is stored to memory, every time the accumulated value external reset is activated, the memory will be accessed. Take into consideration that the maximum number of times the memory can be accessed is 1.5 million times. The total number of external inputs and the accumulated value memorizing time interval should not exceed 1.5 million times.
  - **Peak/Bottom value reset**: Peak and bottom value are reset.

- **Forced output function**
  - The output is turned on/off in a fixed state when starting the system or during maintenance. This enables the confirmation of wiring and prevents system errors due to unexpected output.
  - For the analog output type: When ON, the output will be 5 V (or 10 V when 0 to 10 V is selected) or 20 mA, and when OFF, 1 V (or 0 V when 0 to 10 V is selected) or 4 mA.
  - Also, an increase or decrease of the flow will not change the on/off status of the output while the forced output function is activated.

- **Accumulated value hold**
  - The accumulated value is not cleared even when the power supply is turned off. The accumulated value is memorized every 2 or 5 minutes during measurement and continues from the last memorized value when the power supply is turned on again.
  - The maximum writable limit of the memory device is 1.5 million times, which should be taken into consideration.

- **Peak/Bottom value display**
  - The maximum (minimum) flow rate is detected and updated from when the power supply is turned on. In peak (bottom) value display mode, this maximum (minimum) flow rate is displayed.

- **Setting of security code**
  - The user can select whether a security code must be entered to release the key lock. At the time of shipment from the factory, it is set such that a security code is not required.

- **Keylock function**
  - Prevents operation errors such as accidentally changing setting values.

- **Reset to the default settings**
  - The product can be returned to its factory default settings.

- **Display with zero cut-off setting**
  - When the flow is close to 0 L/min, the product will round the value down and zero will be displayed. A flow value may be displayed even when the flow rate is 0 L/min due to high pressure or depending on the installation. The zero-cut function will force the display to zero. The range to display zero can be changed.

- **Delay time setting**
  - The time from when the instantaneous flow reaches the set value to when the switch output operates can be set. Setting the delay time can prevent the switch output from chattering.
  - (Default setting: 0 s)

- **Digital filter setting**
  - The time for the digital filter can be set to the sensor input. Setting the digital filter can reduce chattering of the switch output and flickering of the analog output and the display.
  - The response time indicates when the set value is 90% in relation to the step input.
  - (Default setting: 0 s)

- **FUNC output switching function**
  - Analog output, external input, or copy function can be selected.
  - (Default setting: Analog output)

- **Selectable analog output function**
  - 1 to 5 V or 0 to 10 V can be selected for the analog voltage output type.
  - (Default setting: 1 to 5 V)
Selection of display on sub screen

Analog output free range function

This function allows a flow that generates an output of 5 V (or 10 V when 0 to 10 V is selected) or 20 mA to be changed. The value can be changed between 10% of the maximum value of the rated flow and the maximum value of the display range.

</tr>
</tbody>
</table>

If the error cannot be solved after the above instructions are performed, please contact SMC for investigation.
**Copy function**

The settings of the master monitor can be copied to the slave monitors, reducing setting labor and minimizing the risk of setting mistakes.

The set value can be copied to up to 10 flow monitors simultaneously. (Maximum transmission distance: 4 m)

1) Wire as shown in the figure on the left.
2) Select the slave monitor which is to be the master, and change it into a master using the buttons. (In the default setting, all flow monitors are set as slaves.)
3) Press the **button on the master monitor to start copying.

**Selection of power-saving mode**

The power-saving mode can be selected.
With this function, if no buttons are pressed for 30 s, it shifts to power-saving mode.
At the time of shipment from the factory, the product is set to the normal mode (the power-saving mode is turned off).
(During power-saving mode, [ECo] will flash in the sub screen and the operation light will be ON (only when the switch is ON).)

* There may be a difference in the displayed value on the connected flow switch and the flow monitor. When the flow monitor display is being used, it is recommended to set the flow switch display to OFF mode.
These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)<sup>1)</sup>, and other safety regulations.

---

**Safety Instructions**

Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.

---

### Caution:

- **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

### Warning:

- **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

### Danger:

- **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

---

#### Warning

1. **The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.**
   
   Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. **Only personnel with appropriate training should operate machinery and equipment.**
   
   The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. **Do not service or attempt to remove product and machinery/equipment until safety is confirmed.**
   
   1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
   
   2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
   
   3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. **Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.**
   
   1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   
   2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
   
   3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
   
   4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

---

#### Caution

1. **The product is provided for use in manufacturing industries.**
   
   The product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

---

#### Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

---

### Limited warranty and Disclaimer

1. **The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.**

   Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. **For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.**

   This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. **Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.**

   - Vacuum pads are excluded from this 1 year warranty.
   
   A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

### Compliance Requirements

1. **The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.**

2. **The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction.**

   - Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

---

### Caution

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

---

### Revision History

- The digital flow monitor PFG300 series has been added.
- Number of pages has been increased from 16 to 28.
