Nozzle Type Ionizer

For dust removal and static neutralization by air blow

- Prevents the electrostatic breakdown of electric parts
- Prevents detachment failure

Offset voltage: ±10 V
(For the energy saving nozzle)

Nozzle Variations
Made to order

With right angles -X367

Energy saving nozzle
High flow rate nozzle
Female threads for piping

Circular diffusion nozzle
Flat diffusion nozzle
Bar nozzle
(Straight type)
Circumferential jet bar nozzle
(Straight type)
Bender tube nozzle
Long nozzle

Application Examples

For dust removal and static neutralization by air blow

- For plastic bottle static neutralization and particle elimination

For spot type static neutralization

IZN10E Series

Slim
Thickness 16 mm x 100 mm x 46 mm
Lightweight 33% reduction
Offset voltage: ±10 V

(For the energy saving nozzle)

Application Examples

For dust removal and static neutralization by air blow

- Prevents the electrostatic breakdown of electric parts
- Prevents detachment failure

IZN10E Series

CAT.ES100-121B
The nozzle type can be selected according to the application.

**Short range static neutralization**

**Designed with a focus on the offset voltage**

Offset voltage: ±10 V

**Discharge time reduced by 65%**

- With external air inlet: 2.0 s
- Without external air inlet: 6 s

**Ionized air flow velocity improved by 2.5 times or more**

- With external air inlet: 2.5 m/s
- Without external air inlet: 1.0 m/s

**Conditions**
- Supply pressure: 0.3 MPa, Distance: 300 mm, Air consumption flow rate: 10 L/min (ANR)

**For the static neutralization of electric substrates**
- Prevents the electrostatic breakdown of electric parts

**For the static neutralization of lenses**
- Removes dust from lenses
- Prevents the adhesion of dust

**For the static neutralization of packing films**
- Prevents the generation of static electricity when opening bags
- Prevents clinging due to static electricity on the inside of candy bags

**Long range static neutralization**

**Improved dust removal performance**

**Long range static neutralization: Max. 500 mm**

**Offset voltage: ±15 V**

**The ionized air is assisted by the compressed air.**

**For the static neutralization of molded goods**
- Prevents problems with the separation of molded plastic goods

**For the static neutralization of plastic cups**
- Removes dust clinging to the inside of cups

**For the static neutralization of parts feeders**
- Prevents the clogging of parts feeders

---

**Ionized air**

- Compressed air for assisting
- Compressed air for transferring ions

**Compressed air**

- Ionized air
- External air inlet
- External air

**External air inlet**

- Nozzle

**Nozzle**

- Energy saving nozzle
- High flow rate nozzle

---

**SMC IONIZER**

- Designed with a focus on the offset voltage
- Discharge time reduced by 65%
- Ionized air flow velocity improved by 2.5 times or more
- Conditions
- Supply pressure: 0.3 MPa, Distance: 300 mm, Air consumption flow rate: 10 L/min (ANR)

---

**Nozzle Type Ionizer IZN10E Series**

- The nozzle type can be selected according to the application.
- Discharge time reduced by 65%
- Ionized air flow velocity improved by 2.5 times or more
- Conditions:
  - Supply pressure: 0.3 MPa, Distance: 300 mm, Air consumption flow rate: 10 L/min (ANR)
  - For the static neutralization of electric substrates
  - Prevents the electrostatic breakdown of electric parts
  - For the static neutralization of lenses
  - Removes dust from lenses
  - Prevents the adhesion of dust
  - For the static neutralization of packing films
  - Prevents the generation of static electricity when opening bags
  - Prevents clinging due to static electricity on the inside of candy bags
  - Improved dust removal performance
  - Long range static neutralization: Max. 500 mm
  - Offset voltage: ±15 V

---

**Static neutralization is possible with minimal air consumption.**
With external switch input function (2 inputs)

Prevents static neutralization problems
Discharge stops when abnormal purge air pressure is detected by the pressure switch.

Energy saving
Discharge stops when the electrostatic sensor detects that static neutralization has been completed.

A high voltage power supply cable is not required.
A high voltage power supply is built into the product; therefore, an external high voltage power supply or high voltage power supply cable is not required.

Easy maintenance
- Can be disassembled into 3 parts
  Tools are not required for the installation or removal of the assembly.
- It is possible to conduct maintenance on the emitter without removing the body.
- There is no need to readjust the nozzle angle when the ionizer is restarted.

Maintenance warning function
- Monitors emitter contamination and wear continuously
- Notification of abnormalities via LED and output signal
- Detects optimal maintenance time
- Reduced maintenance labor
Mounting variations

- **Direct mounting**
  - Top through-hole mounting
  - Bottom tapped mounting

- **Bracket mounting** p. 12
  - L-bracket
  - Pivoting bracket
  - DIN rail mounting bracket
  - Single unit
  - Manifold
  - The L-bracket and the DIN rail mounting bracket can be used with the manifold.

Intermittent control timer Related product p. 20

Air saving IZE110-X238

A digital timer that can control the ON/OFF switches of valves, etc.

Intermittent ion discharge reduces air consumption.

- Intermittent control timer
- Ionizer
- 2-port solenoid valve
- Air purge
**Nozzle variations**

With right angles -X367

---

2 types of nozzles

**Energy saving nozzle**

Short range static neutralization
Designed with a focus on the offset voltage

Offset voltage: Within $\pm 10 \, \text{V}^{\circ}$
Increases air blow flow rate by external air intake

Static neutralization is possible with minimal air consumption.

**High flow rate nozzle**

Long range static neutralization and dust removal

The ionized air is assisted by the compressed air.
- Dust removal performance can be improved by using the energy of the compressed air.
- Suitable for static neutralization at a long distance (max. 500 mm)

Offset voltage: Within $\pm 30 \, \text{V}^{\circ}$

---

Static neutralization in narrow spaces is possible.

</table>

* The One-touch fitting cannot be changed after the delivery of the product.

Cautions when using the IZN10E-11mmm female threads for piping

- For the female thread (Rc1/8) type, a made-to-order nozzle or fittings/tubing combination must be prepared and connected by the user.
- If a nozzle with discharge port diameter or tubing with an I.D. of less than 4 mm is connected, the air pressure inside the nozzle may increase depending on the configuration.
- This product uses a high frequency AC voltage. If the air pressure around the emitter increases during ion generation, the ion generation efficiency decreases and the maintenance alarm (signal output, maintenance LED) will be activated. (Refer to the figure to the right.)
- When the maintenance alarm is generated, the static neutralization performance is decreased.
- The table below shows the supply pressure specifications when made-to-order nozzles and fittings/tubing combinations are connected.
- When using piping materials prepared by the user, secure an air passage of 4 mm or more inside diameter. If using tubing, ensure the minimum bending radius is used and keep the tube length to 500 mm or less.
- Please install so as not to receive a moment force on the nozzle. (Refer to page 25.)

<table>
<thead>

Input/Output specifications

Symbol  Type
G1  With AC cord*1
G2  Without AC cord

*1 AC cord is only for use in Japan. (Rated voltage 125 V, Plug JIS C8303, Inlet IEC60320-C8)

*2 Select the same input/output specification as the ionizer.

Cleaning kit IZS30-M2
Functions

1. Maintenance warning

Constantly monitors the emitter for lowered static neutralization performance due to the contamination or wear of the emitter. The maintenance LED lights up and the maintenance signal is generated when abnormalities are detected.

2. Signal inputs by external switch

There are 2 ports for external switch signal inputs.

**Example** Discharge stops when abnormal purge air pressure is detected by the pressure switch.

- Prevents static neutralization problems due to compressed air pressure drops

**Example** Discharge stops when the electrostatic sensor detects that static neutralization has been completed.

- Energy can be saved by stopping discharge when static neutralization is completed.

*1 Wiring requirement
○: Minimum wiring requirement for ionizer operation

Input signal
NPN: The signal is turned ON when the 0 V power supply is connected, and turned OFF when disconnected.
PNP: The signal is turned ON when the +24 VDC power supply is connected, and turned OFF when disconnected.

Output signal
NPN: The output transistor is energized (by the 0 V power supply inside the ionizer) when the signal is turned ON, and de-energized when turned OFF.
PNP: The output transistor is energized (by the +24 VDC power supply inside the ionizer) when the signal is turned ON, and de-energized when turned OFF.

Provide Grounding
Make sure to ground the ground terminal with a ground resistance of 100 Ω or less.
The ground terminal is used as a reference electric potential for static neutralization.
If the ground terminal is not grounded, the ionizer will not be able to achieve the optimal offset voltage (ion balance).
Power Supply Cable Connection Circuit

Make sure to ground the ground terminal with a ground resistance of 100 Ω or less. The ground terminal is used as a reference electric potential for static neutralization. If the ground terminal is not grounded, the ionizer will not be able to achieve the optimal offset voltage (ion balance).

Intermittent Control Timer (Made to Order)

Air saving
A digital timer that can control ON/OFF switches of valves etc.
Application: Improved dust removal effect under low air consumption by intermittent ion blowing

- Adjustable frequency: 0.1 to 50.0 Hz
- Set individual ON and OFF times from 0.1 to 99.9 seconds
- Display of accumulated number of pulses
  It can be used for maintaining valve or cylinder operations.

Switch output (Output under timer control)

- 2 types of trigger inputs
  - Repeat input (ON/OFF operation during trigger input)
    - [Trigger] ON
    - OFF
    - [Valve operation] ON
    - OFF
  - One-shot input (ON/OFF operation for a time set from trigger input)
    - [Trigger] ON
    - OFF
    - [Valve operation] ON
    - OFF

- Solenoid valves up to 24 VDC (4 W) etc. are controllable.

IZN10E Series
Specific Product Precautions 1
Be sure to read this before handling the products. Refer to the back cover for safety instructions.

Mounting

⚠️ Warning

1. This product is intended to be used with general factory automation (FA) equipment.
   If considering using the product for other applications (especially those indicated in warning (4) on the back cover), please consult with SMC beforehand.

2. Use this product within the specified voltage and temperature range.
   Using outside of the specified voltage, temperature, or humidity range can cause a malfunction, damage, electrical shock, or fire.

3. Use clean compressed air as fluid.
   This product is not explosion proof. Never use a flammable gas or an explosive gas as a fluid and never use this product in the presence of such gases. Please contact us when fluids other than compressed air are used.

4. This product is not explosion-protected.
   Never use this product in locations where the explosion of dust is likely to occur or flammable or explosive gases are used. This can cause a fire.

⚠️ Caution

1. This product is not washed. When bringing into a clean room, flush for several minutes and confirm the required cleanliness before use.

Mounting

⚠️ Warning

1. Reserve enough space for maintenance, piping and wiring.
   Please take into consideration that the One-touch fittings for supplying air, need enough space for the air tubing to be easily attached/detached.
   To avoid excessive stress on the connector and One-touch fitting, please take into consideration the cable and air tube minimum bending radius and avoid bending at acute angles.
   Wiring with excessive twisting, bending, etc. can cause a malfunction, wire breakage, fire, or air leakage.

   Minimum bending radius: Power supply cable……….30 mm
   (Note: Shown above is wiring with the fixed minimum allowable bending radius and at a temperature of 20°C. If used under this temperature, the connector can receive excessive stress even though the minimum bending radius is allowable.)
   Regarding the minimum bending radius of the air tubing, refer to the operation manual or catalog for tubing.

2. When installing the product directly on a mounting surface, mount it on a flat surface.
   Mounting on an uneven surface will apply excess force to the ionizer body, which leads to damage or failure. Do not drop the product or subject it to a strong impact. This may cause an injury or accident.

3. Keep the area specified clear when the product is mounted directly on to a mounting surface or workpiece which is connected to ground.
   Install the product with the mounting surface or workpiece avoiding the shaded area in the drawing below. If the grounded mounting surface or workpiece is too close to the shaded area, the ozone concentration inside the product may increase, causing failure of the product, depending on the operating conditions.

   Refer to the Dimensions (page 17) for dimensions of the shaded area.

4. Do not cover the external air intake port of the energy saving nozzle.
   The energy saving nozzle uses external air. The external air intake port is located in part A and part B. When installing an energy saving nozzle, do not cover the two external air intake ports. If the external air flow is blocked, product performance will be reduced.

5. Avoid using in a place where noise (electromagnetic wave and surge) is generated.
   If the product is used in an environment where noise is generated, it may lead to a malfunction and deterioration or damage of the internal elements. Take measures to prevent noise at its source and avoid power and signal lines from coming into close contact.

6. Use the correct tightening torque. Refer to the table below for tightening torque for screws.
   If the screws are tightened in excess of the specified torque range, it may damage the mounting screws, mounting brackets, etc. If the tightening torque is insufficient, the mounting screws and brackets may become loose.

<table>
<thead>
<tr>
<th>Thread size</th>
<th>Recommended tightening torque</th>
</tr>
</thead>
<tbody>
<tr>
<td>M3</td>
<td>0.61 to 0.63 N·m</td>
</tr>
</tbody>
</table>
IZN10E Series
Specific Product Precautions 2
Be sure to read this before handling the products. Refer to the back cover for safety instructions.

Warning
7. Do not allow foreign matter or tools to enter the nozzle.
   The inside of the nozzle contains emitters. If a metal tool makes contact with the emitters, it can cause electric shock, resulting in a sudden movement by the operator that can cause further injuries such as hitting the body on peripheral equipment. Also, if the tool damages the emitter, the ionizer may fail or cause an accident.

Danger High Voltage
Emitters are under high voltage. Never touch them as there is a danger of electric shock or injury due to an evasive action against a momentary electrical shock caused by inserting foreign matter in the cartridge or touching the emitter.

8. Do not apply moment to the nozzle.
   A moment force may be applied to the nozzle depending on the shape of the nozzle attached to the female piping thread. It is possible that the nozzle or ionizer body will be damaged if vibration occurs. If a moment of 0.05 N-m or more will be applied, mount a support to the middle part of the nozzle so that the moment is not applied to the nozzle.

9. Do not apply tape or stickers to the product body.
   If a tape or seal contains any conductive adhesive or reflective paint, a dielectric phenomenon may occur due to the generated ions, resulting in electrostatic charge or electric leakage.

10. Ensure the power supply is removed before installing and adjusting the product.

Wiring / Piping

Warning
1. Before wiring, ensure that the power supply capacity is enough and that the voltage is within the specification.
2. To maintain product performance, the power supply shall be UL listed Class 2 certified by National Electric Code (NEC) or evaluated as a limited power source provided by UL60950.
3. Be sure to ground with a ground resistance of 100 Ω or less to maintain the product performance.
   If such grounding is not provided, not only may static electricity removal capability be disrupted but electric shocks may also result and the ionizer or power supply may break down.

4. Wiring (including insertion and removal of the connector) should never be carried out with the power supply ON.
5. Ensure the safety of wiring and surrounding conditions before supplying power.
6. Do not connect or disconnect the connectors (including power source) while the power is supplied. Failure to follow this procedure may cause product malfunction.
7. If the ionizer wiring and high power lines are routed together, this product may malfunction due to noise. Therefore, use a separate wiring route for this product.
8. Confirm that the wiring is correct before operation.
   Incorrect wiring will lead to product damage or malfunction.
9. Flush the piping before use.
   Before using this product, exercise caution to prevent particles, water drop, or oil contents from entering the piping.

Operating Environment / Storage Environment

Warning
1. Do not use this product in an enclosed space.
   This product utilizes a corona discharge phenomenon. Do not use the product in an enclosed space as ozone and nitrogen oxides exist in such places, even though in marginal quantities. Also, ozone condensation can increase if used in an enclosed space, which can affect the human body, so ventilation is necessary. Even if ventilation is secured, the use of multiple ionizers in a narrow space can increase ozone condensation. Therefore, check that ozone condensation is not more than a standard value of 0.1 ppm in the operating environment while the ionizer is in operation.
IZN10E Series
Specific Product Precautions 3

Be sure to read this before handling the products.
Refer to the back cover for safety instructions.

### Operating Environment / Storage Environment

**Warning**

2. **Take preventative measures against ozone.**
   Equipment used around this product should have ozone-prevention measures. Also, regularly check that there is no deteriorating ozone.

3. **Be sure to supply air.**
   If air is not supplied, not only is the static neutralization affected, but also the ozone and nitrogen oxides generated in the ion generator accumulates, which causes an adverse effect on the inside of the product, or peripheral equipment. Be sure to supply air during a discharge.
   When the product is used for intermittent ion blow, pressure fluctuations in the air supply can cause instability in the corona discharge of the ion generator, resulting in difficulty maintaining the offset voltage specification. Be sure to confirm that there are no problems with the static neutralization.

4. **Observe the ambient temperature range.**
   The ambient temperature range is 0 to 55°C for the ionizer. Do not use the product in locations where the ambient temperature changes suddenly even within the specifications or if the temperature difference of the fluid relative to the ambient temperature is large condensation may occur.

5. **Environments to avoid**
   Avoid using and storing this product in the following environments since they may cause damage to this product:
   a) Areas where the ambient temperature exceeds the range of 0 to 55°C
   b) Areas where the ambient humidity exceeds the range of 35 to 65% RH
   c) Areas where abrupt temperature changes may cause condensation
   d) Areas where corrosive gas, flammable gas or other volatile flammable substances are stored
   e) Areas where the product may be exposed to conductive powder such as iron powder or dust, oil mist, salt, organic solvent, machining chips, particles or cutting oil (including water and any liquids), etc.
   f) Paths of direct air flow, such as air conditioners
   g) Enclosed or poorly ventilated areas
   h) Locations which are exposed to direct sunlight or heat radiation
   i) Areas where strong electromagnetic noise is generated, such as strong electrical and magnetic fields or supply voltage spikes
   j) Areas where the product is exposed to static electricity discharge
   k) Locations where strong high frequency is generated
   l) Locations that are subject to potential lightning strikes
   m) Areas where the product may receive direct impact or vibration
   n) Areas where the product may be subjected to forces or weight that could cause physical deformation

6. **Do not use an air containing mist or dust.**
   The air containing mist or dust will cause the performance to decrease and shorten the maintenance cycle.
   Supply clean compressed air (compressed air quality of Class 2.4.3, 2.5.3, 2.6.3 or higher according to ISO 8573-1: 2010 (JIS B 8392-1: 2012) is recommended for operation) by using an air dryer (IDF series), air filter (AF/AFF series), and mist separator (AFM/AM series).

7. **This product does not incorporate protection against lightning surges.**

8. **Effects on implantable medical devices**
   The electromagnetic waves emitted from this product may interfere with implantable medical devices such as cardiac pacemakers and cardioverter defibrillators, resulting in the malfunction of the medical device or other adverse effects.
   Please use extreme caution when operating equipment which may have an adverse effect on your implantable medical device. Be sure to thoroughly read the precautions stated in the catalog, operation manual, etc., of your implantable medical device, or contact the manufacturer directly for further details on what types of equipment need to be avoided.

### Maintenance

**Warning**

1. **Periodically inspect the ionizer and clean the emitters.**
   Check regularly if the product is operating with undetected failures or not. The maintenance must be performed by an operator who has sufficient knowledge and experience. If the product is used for an extended period with dust present on the emitters, the static neutralization performance will be reduced. Since the energy saving nozzle is equipped with an ambient air introduction mechanism, it is easier to be affected by the ambient air compared with the high flow rate nozzle or the female threads for piping, and dust tends to adhere to the emitter more quickly. Clean the emitter when the maintenance LED turns ON.
   If the emitter becomes worn and the static neutralization performance is not restored after cleaning, replace the emitter.

**Danger High Voltage**

This product contains a high voltage generation circuit. When performing maintenance inspection, be sure to confirm that the power supply to the ionizer is turned off. Never disassemble or modify the ionizer, as this may not only impair the product’s functionality but could cause an electric shock or electric leakage.

2. **The tube and fitting must be treated as consumable parts.**
   The tube and fitting that are connected to the female piping ports can deteriorate due to ozone and need to be replaced regularly or use an ozone resistant type.

3. **Cleaning the emitter or replacing the cartridge assembly should never be performed while the power and compressed air is supplied to the product.**
   Touching an emitter when it is electrified may result in electric shock or other accidents.
   If the cartridge assembly is removed while compressed air is supplied, the cartridge assembly will shoot out.
   If cartridge assemblies are not securely installed, there is a danger that they may shoot out or fall when compressed air is supplied.

4. **Do not disassemble or modify the product.**
   Otherwise, an electrical shock, damage and/or a fire may occur. Also, the disassembled or modified products may not achieve the performances guaranteed in the specifications, and exercise caution because the product will not be warranted.

5. **Do not operate the product with wet hands.**
   Otherwise, an electric shock or accident may occur.

### Handling

**Warning**

1. **Do not drop, hit or apply excessive shock (100 m/s² or more) to the product when handling it.**
   Even if the product appears undamaged, the internal components may be damaged, leading to a malfunction.

2. **When mounting/dismounting the cable, use your finger to pinch the claw of the connector, then attach/detach it correctly.**
   Otherwise, connector mounting section may be damaged and cause a disorder.
These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1, and other safety regulations.

### Safety Instructions

**Caution:** Indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

**Warning:** Indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

**Danger:** Indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

### Safety Instructions

1. **Caution:**
   - The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
   - Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. **Caution:**
   - Only personnel with appropriate training should operate machinery and equipment.
   - The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. **Caution:**
   - Do not service or attempt to remove product and machinery/equipment until safety is confirmed.
   - The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
   - When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
   - Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. **Caution:**
   - Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
   - Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
   - Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
   - An application which could have negative effects on people, property, or animals requiring special safety analysis.
   - Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

### Warning

1. **Warning:**
   - When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.

2. **Warning:**
   - Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.
   - If the product is provided for use in manufacturing industries, the product herein described is basically provided for peaceful use in manufacturing industries. If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

### Caution

1. **Caution:**
   - The product is provided for use in manufacturing industries. The product herein described is basically provided for peaceful use in manufacturing industries.
   - If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

### Limited warranty and Disclaimer

**Limited warranty and Disclaimer**

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

**Limited warranty and Disclaimer**

1. **Limited warranty and Disclaimer**
   - The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first. Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

### Compliance Requirements

**Compliance Requirements**

1. **Compliance Requirements**
   - The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

**SMC products are not intended for use as instruments for legal metrology.**

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.
