Gun Type Ionizer

Blow setting function
Select from continuous blow or pulse blow.

Trigger setting function
Trigger linked/Trigger lock/OFF timer can be selected.

Flow rate adjustment function
Flow adjustment valve with indicator enables handheld flow adjustment.

Lighting LED

Reduced operating force

Easy to hold grip

Lightweight
Only 200 g

*1 Body weight

Rapid static neutralization
0.3 s⁻¹

+1 Distance: 150 mm,
Operating pressure: 0.2 MPa

IZG10 Series

CAT.ES100-134A
Blow and trigger setting can be selected.

Selection of blow setting

- **Continuous blow**
  - Blows ionized air continuously.

- **Pulse blow**
  - Pulse blow saves air.

Selection of trigger setting

- **Trigger linked**
  - Trigger ON/OFF and Blow ON/OFF are linked.

- **Trigger lock**
  - Trigger operation turns Blow ON. Blow remains ON until another trigger input turns Blow OFF.

- **OFF timer**
  - Trigger operation turns Blow ON. Blow remains ON for set time then automatically turns OFF. Timer set time: 3 s, 5 s, 7 s
2 With flow adjustment valve (with indicator)

- Flow rate of ionized air can be adjusted on the gun.
- The flow rate can be controlled numerically.

Supply pressure: 0.4 MPa

3 High visibility LEDs

Rear mounted LEDs are easy to see during operation.

- Power ON
- Ion generation
- Maintenance indicator
- Incorrect high voltage

Turns ON when lowered static neutralization performance due to the contamination, wear, or breakage of the emitter is detected.
Turns ON when a high voltage output error, such as emitter short circuit or abnormal discharge occurs.

4 Lighting LED

Easy to find particles on the workpiece

5 Easy cleaning and replacement of emitters

1. Removal of nozzle
2. Pull forward to remove.
3. Turn counterclockwise.

1. Removal of emitter
2. Pull forward to remove.
3. Turn counterclockwise.
Application Examples

For the static neutralization and dust removal of resin parts

For the static neutralization and dust removal of resin parts

For the dust removal of resin products

For the static neutralization and dust removal of electric substrates

For the static neutralization and dust removal of resin parts with the ionizer suspended from above

For the dust removal when detaching from film

</tbody>
</table>

* AC cord is only for use in Japan. (Rated voltage 125 V, Plug JIS C 8303, Inlet IEC 60320-C13)

⚠️ **Caution**

The nozzle is specific for this product. Do not use any other nozzle. Doing so will adversely affect static neutralization performance.

---

**Accessories (for Individual Parts)**

### AC adapter

**IZG10—CG**

- **AC adapter**
  - 1 With AC cord*
  - 2 Without AC cord

* AC cord is only for use in Japan. (Rated voltage 125 V, Plug JIS C 8303, Inlet IEC 60320-C13)

### Power supply cable (For 24 VDC wiring)

**IZG10—CP**

- Cable length: 3 m

### Nozzle assembly

**IZG10—A001—01**

### Emitter assembly

**IZG10—NT**

- A protective cap is attached to the tip of the emitter when shipped. Please remove the cap before use.

### Cleaning kit

**IZS30—M2**

(With 1 felt pad, 1 rubber grindstone, and 2 replacement felt pads)

**IZS30—A0201**

(10 replacement felt pads)

**IZS30—A0202**

(1 replacement rubber grindstone)

*1 Measured with a high pressure probe of 1000 MΩ and 5 pF
*2 Measurement value based on a charged plate (dimensions: 150 mm x 150 mm, capacitance: 20 pF) as defined in the U.S. ANSI standards (ANSI/ESD STM3.1-2015)
*3 The distance between the charged plate and the ionizer: 150 mm, the operating pressure is 0.2 MPa.
*4 Static neutralization is not possible without supplying compressed air. Without compressed air, ozone or NOx generated by the ion generation process may accumulate and adversely affect the product and peripheral equipment.

Gun Type Ionizer IZG10 Series
Mode Switch Setting

Blow or trigger setting can be selected by using the mode setting switch.
Open the slide cover and using a flat bladed screwdriver rotate the dial to select the setting number 0 to 9, referring to the table below. *1
Ensure the slide cover is closed when setting is complete.

*1 Default setting: Set no. 0

Wiring

AC adapter type IZG10-m01, 02
- Connect the M8 connector on the power cable for AC adapter to the power connector on the main unit. Connect the plug of the AC cord to a commercial power outlet with a ground terminal (100 to 240 VAC, 50/60 Hz).
- Ensure the ground terminal is correctly connected. The ground terminal is connected to the frame ground (F.G.) of this product. Static neutralization performance is achieved by using the F.G. connection to maintain the same electrical potential as the reference potential of the operating environment.
- The input ground terminal and the output DC (–) terminal of the AC adapter (IZG10-CG1, 2 ordered separately) are electrically connected. Do not connect any equipment other than this product. Otherwise, a failure or electric shock may result.

Power supply cable type IZG10-m03
- Connect the user equipment for the power supply and external switch input according to Power Supply Cable Wiring table.
- Ensure the green F.G. wire is correctly grounded. Static neutralization performance is achieved by maintaining the same electrical potential as the reference potential of the operating environment.

Power Supply Cable Wiring

Specific Product Precautions 1
Be sure to read this before handling the products. Refer to the back cover for safety instructions.

Selection

⚠️ Warning
1. This product is intended to eliminate static electricity from the equipment for factory automation.
   If considering using the product for other applications (especially those indicated in warning (4) on the back cover), please consult with SMC beforehand.

2. Do not operate the product beyond the specifications.
   If the product is used outside of the specification range, it may cause malfunction, failure or damage to the product, leading to an electric shock, explosion or fire.

3. Do not operate the product outside of the specified ambient temperature and humidity range.
   Malfunction, failure, or damage to the product can result. Even within the specification range, freezing and condensation can cause malfunction, failure, or damage in environments where sudden temperature changes and temperature cycles are applied.

4. Use the product within the specified power supply voltage range.
   Using outside of the specified power supply voltage can cause a malfunction, damage, electrical shock, or fire.

5. Use clean compressed air as fluid. (Compressed air quality of Class 2.4.3., 2.5.3., 2.6.3 or higher according to ISO 8573-1:2010 (JIS B 8392-1:2012) is recommended for operation.)
   This product is not explosion proof. Never use a flammable gas or an explosive gas as a fluid and never use this product in the presence of such gases. Please contact us when fluids other than compressed air are used.

6. This product is not explosion-protected.
   Never use this product in locations where the explosion of dust is likely to occur or flammable or explosive gases are used. This can cause a fire.

⚠️ Caution
1. Clean specification is not available with this product.
   When using in a clean room environment, confirm the required cleanliness before use.
   A minute amount of particles are generated due to wearing of the emitters while the product is operating.

Wiring / Piping

⚠️ Warning
4. To maintain the product performance, connect the product to power supply cable or AC adapter ground terminal with a resistance of 100 Ω or less. If the product is not grounded, it is not possible to maintain the performance and may lead to product failure or malfunction.

5. If the ionizer wiring and high power lines are routed together, this product may malfunction due to noise. Therefore, use a separate wiring route for this product.

6. Flush the piping before use. Before piping this product, exercise caution to prevent particles, water drops, or oil contents from entering the piping.

7. If a valve is placed immediately before the product, regardless of the operational state of the trigger, instantaneous air release may occur when compressed air is supplied.

8. Confirm that the wiring and piping are correct before supplying power and compressed air. Incorrect wiring and piping will lead to product damage or malfunction.

9. Ensure the safety of wiring, piping, and surrounding conditions before supplying power and compressed air.

⚠️ Caution
1. Do not use the product without mounting the designated nozzle.

2. Confirm that the nozzle is not loose and does not have play before supplying compressed air. If the nozzle is loose, tighten it by hand until it stops turning (guideline value for hand tightening torque: 0.1 to 0.2 N·m). Static neutralizing performance is reduced if the nozzle is loose.

3. Be sure to wear protective eyewear when operating the product to protect your eyes from scattering debris.

4. Do not direct the tip of the nozzle at the face or other parts of a human body. It may cause danger to personnel.

5. Do not use the product to clean or remove toxic substances or chemicals.

6. Do not drop, step on, or hit the product. It may cause damage to the product.

7. Do not use the product to disturb public order or public hygiene.

8. This product is not a toy.

9. After blowing, make sure to hang the product on a hook, etc.
IZG10 Series
Specific Product Precautions 2
Be sure to read this before handling the products.
Refer to the back cover for safety instructions.

Handling

⚠️ Warning
10. Make sure that no twist, turn, tensile force or moment are applied to the One-touch fitting, tube and power cable during use or storage. Such actions may lead to product damage or broken wires.

11. Do not allow foreign matter or tools to enter the nozzle.

The inside of the nozzle contains emitters. If a metal tool makes contact with the emitters, it can cause electric shock, resulting in a sudden movement by the operator that can cause further injuries such as hitting the body on peripheral equipment. Also, if the tool damages the emitter, the ionizer may fail or cause an accident.

⚠️ Danger High Voltage
Emitters are under high voltage. Never touch the emitters. Contact with or close proximity to the emitters may result in an electric shock. The reaction to such a shock could lead to further injuries due to collisions with surrounding equipment.

12. If a valve is placed immediately before the product, regardless of the operational state of the trigger, instantaneous air release may occur when compressed air is supplied.

13. If the supply pressure of compressed air is less than the product specification (0.05 MPa), the valve in the product may not operate correctly. Only use the product with a supply pressure within the product specification range.

Operating Environment / Storage Environment

⚠️ Warning
5. Environments to avoid
Avoid using and storing this product in the following environments since they may cause damage to this product.

a. Environments where the ambient temperature is outside of the product specification
b. Environments where the ambient humidity is outside of the product specification
c. Environments where abrupt temperature changes may cause condensation
d. Environments where corrosive gas, flammable gas, or other volatile flammable substances are stored
e. Environments where the product may be exposed to conductive powder such as iron powder or dust, oil mist, salt, organic solvent, spatter, machining chips, particles, cutting oil (including water and any liquids), etc.
f. Environments where ventilated air from an air conditioner is directly applied to the product
g. Enclosed or poorly ventilated environments
h. Environments that are exposed to direct sunlight or heat radiation
i. Environments where strong electromagnetic noise is generated, such as strong electrical and magnetic fields or supply voltage spikes
j. Environments where static electricity is generated
k. Environments where a strong high frequency occurs
l. Environments that are subject to potential lightning strikes
m. Environments where the product may receive direct impact or vibration
n. Environments where the product may be subjected to forces or weight that could cause physical deformation

6. Do not use an air containing mist or dust.
The air containing mist or dust will cause the static neutralization function to decrease and shorten the maintenance cycle. Install an air dryer (IDF series), air filter (AF/AFF series), and/or mist separator (AFM/AM series) to obtain clean compressed air (compressed air quality of Class 2.4.3., 2.5.3., 2.6.3 or higher according to ISO 8573-1:2010 (JIS B 8392-1:2012) is recommended for operation).

7. This product and AC adapter are not resistant to lightning surge.

8. Effects on implantable medical devices
The electromagnetic waves emitted from this product may interfere with implantable medical devices such as cardiac pacemakers and cardioverter defibrillators, resulting in the malfunction of the medical device or other adverse effects. Please use extreme caution when operating equipment which may have an adverse effect on your implantable medical device. Be sure to thoroughly read the precautions stated in the catalog, operation manual, etc., of your implantable medical device, or contact the manufacturer directly for further details on what types of equipment need to be avoided.

1. Do not use this product in an enclosed space.
This product utilizes the corona discharge phenomenon. A small amount of ozone and NOx will be generated. When the product is used in an enclosed space, the ozone concentration can increase, if so the smell of ozone may be uncomfortable or irritating. Even if the operating area is not an enclosed space, but multiple products are used in a small area, ozone concentration can still increase. The operating environment must always be ventilated.

2. Take preventative measures against ozone.
Pneumatic equipment used around this product should have ozone-prevention measures. Also, regularly check that there is no deterioration due to ozone.

3. Be sure to supply compressed air.
Static neutralization is not possible without supplying compressed air. Without compressed air, ozone or NOx generated by the ion generation process may accumulate and adversely affect the product or peripheral equipment.

4. Use the product within the specified ambient temperature range.
The specified ambient temperature range is 0 to 40°C. Do not use the product in locations where the ambient temperature changes suddenly even within the specifications or if the temperature difference of the fluid relative to the ambient temperature is large condensation may occur.

Refer to the back cover for safety instructions.
IZG10 Series
Specific Product Precautions 3
Be sure to read this before handling the products.
Refer to the back cover for safety instructions.

**Maintenance**

![Warning]

1. Periodically inspect the ionizer and clean the emitters.
   - Check regularly if the product is operating with undetected failures or not.
   - The maintenance must be performed by an operator who has sufficient knowledge and experience.
   - If the product is used for an extended period with dust present on the emitters, the static neutralization performance will be reduced. It is recommended to clean the emitters periodically. (Emitter contamination level is different depending on the operating environment and supply pressure.)
   - When the maintenance LED turns ON, clean the emitters and confirm the static neutralization performance.
   - If the static neutralization performance is not recovered after cleaning, it is possible that emitters are worn. Replace the emitter assembly.

![Danger High Voltage]

This product contains a high voltage generation circuit. When performing maintenance inspection, be sure to confirm that the power supply to the ionizer is turned off. Never disassemble or modify the ionizer, as this may not only impair the product's functionality but could cause an electric shock or electric leakage.

2. When cleaning or replacing the emitter, be sure to turn off the power supply or compressed air supply to the body.
   Maintenance of the product with power or compressed air supplies connected can cause an electric shock or accident.

3. Securely mount the emitters.
   If emitters are not securely mounted, they may eject or release when compressed air is supplied to the product.

4. Do not touch the emitters directly.
   They have a sharp end and touching them may cause injury.

5. Do not disassemble or modify the product.
   Otherwise, an electrical shock, damage and/or a fire may occur. Also, the disassembled or modified products may not achieve the performances guaranteed in the specifications, and exercise caution because the product will not be warranted.

6. Do not operate the product with wet hands.
   Otherwise, an electric shock or accident may occur.

![Caution]

1. Periodically check the following items and replace the parts if necessary.
   a. Contamination and wear of emitters
   b. Loosening and damage of nozzles
   c. Twists or crushing of connected tubes
   d. Hardness and deterioration of connected tubes
   e. Air leakage
Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) and other safety regulations.

**Caution:** Indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

**Warning:** Indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

**Danger:** Indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

---

### Safety Instructions

#### Caution

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.

2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.

3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.

2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.

3. An application which could have negative effects on people, property, or animals requiring special safety analysis.

4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

---

### Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.

Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.

2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.

This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.

3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

---

### Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.

2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

---

**Caution**

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

---

Be sure to read the “Handling Precautions for SMC Products” (M-E03-3) and “Operation Manual” before use.
