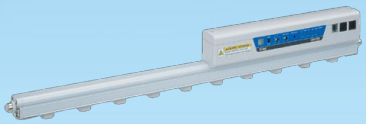
Ionizer

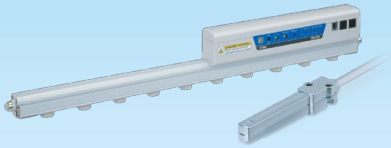
Potential amplitude: 25 V or less [Note 1)]

Rapid neutralization of static electricity: Fastest time: 0.1 seconds [Note 2)]



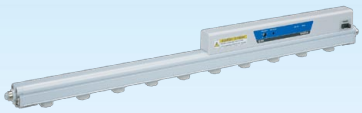
Dual AC type *Series IZS42*

Potential amplitude is reduced with Dual AC type.



Feedback sensor type *Series IZS41*

Rapid neutralization of static electricity by a feedback sensor



Standard type *Series IZS40*

Simple operation: Can be controlled by powering the ionizer ON.

Note 1) IZS42, Installation height: 300 mm
Note 2) Conditions/With feedback sensor
Charged voltage: 1000 V→100 V
Discharged object: Charged plate (150 mm x 150 mm, capacitance 20 pF)
Installation distance: 200 mm (Tungsten electrode needle with air purge)

Series IZS40/41/42

SMC

CAT.ES100-97B ⓐ

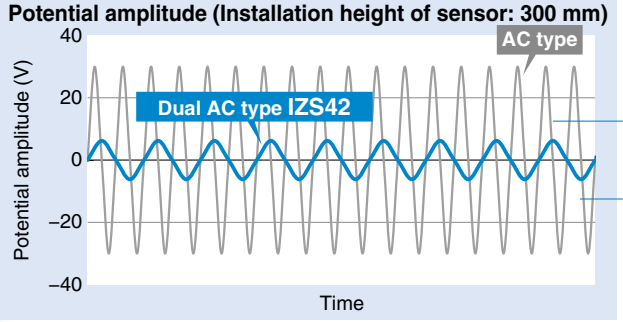
Dual AC type Series IZS42 (Potential amplitude reduction specification)

Potential amplitude: 25 V or less 80% reduction compared to the conventional model

(Compared to the IZS31 series at the installation height of 300 mm)

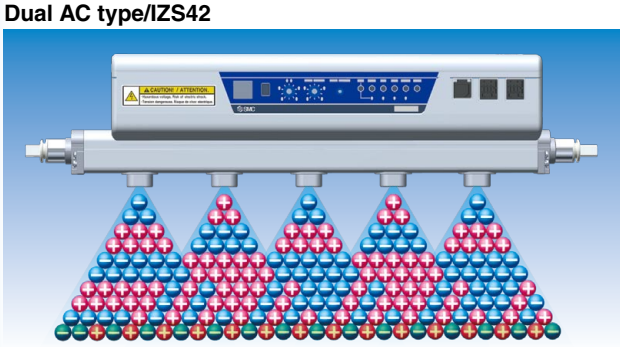
Potential amplitude is reduced with **SMC independent Dual AC type sensor**.
Static neutralization may be achieved without causing damage to a device which is sensitive to electrostatic discharge (ESD).
Potential amplitude applied to the applicable workpiece is reduced even if it the workpiece is mounted within close proximity of the ionizer.

Potential amplitude (Installation height of sensor: 300 mm)



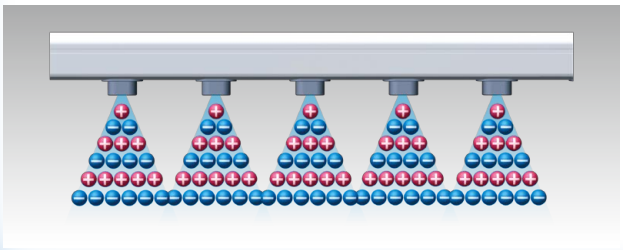
Independent Dual AC type is implemented.

Dual AC type/IZS42



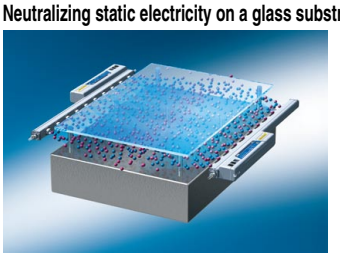
Discharges + ions and – ions at the same time to allow the + and – ions to reach the workpiece evenly, thereby reducing the potential amplitude.

AC type



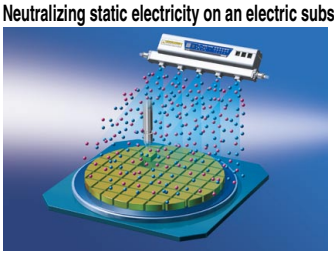
+ ion and – ion layers reach the workpiece within the same cycle, which increases the potential amplitude.

Neutralizing static electricity on a glass substrate



Prevents the breakage of glass substrates due to the static electricity which is generated when the substrate is lifted from the surface plate.

Neutralizing static electricity on an electric substrate



Prevents the breakage of electric substrates due to the static electricity which is generated when the substrates are picked up after dicing.

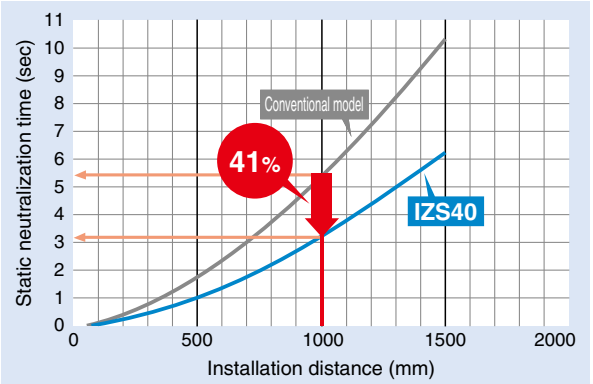
Standard type Series IZS40

Simple operation: Can be controlled by powering the ionizer ON.

Static electricity removal speed is improved with the use of the IZS40. At 1000 mm, the static electricity removal speed of the IZS40 is **3.2 s**. This represents a 41% reduction in removal speed as compared to previously released models.

Static neutralization data when voltage is reduced from 1000 V to 100 V.

Conditions: Ion generation frequency 30 Hz Supply pressure: 0.1 MPa
The IZS40 has a high speed static neutralization cartridge.

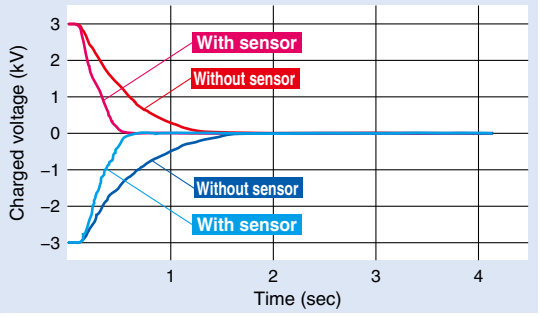


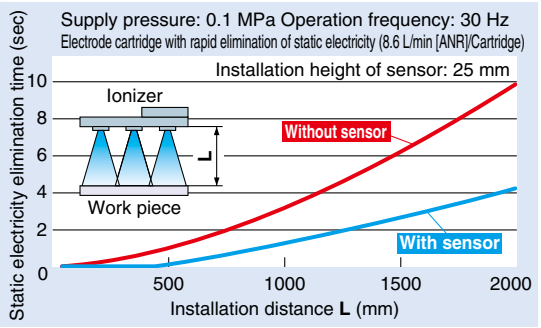
Feedback sensor type *Series IZS41* (High speed static neutralization specification)

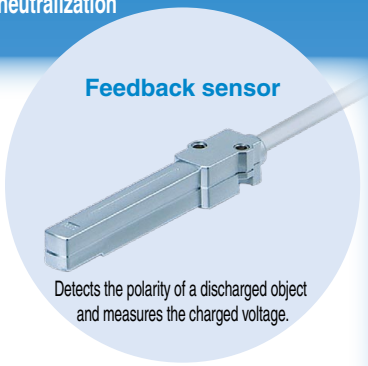
Rapid neutralization of static electricity by a feedback sensor

Note) An ion balance sensor is installed.

The speed of static neutralization has been increased by reading the workpiece's electrostatic potential by the feedback sensor (option) and continuously emitting ions with a reverse polarity.





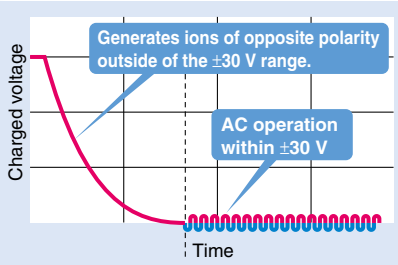


Run mode after static neutralization (ion balance: within ±30 V) can be selected.

Energy saving run mode Stops generating ions after static neutralization to reduce power consumption.

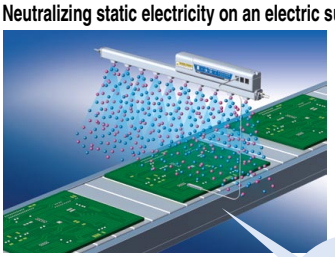
Continuous static neutralization run mode After static neutralization, the ionizer changes to AC mode. Continues to neutralize static electricity to make it approach 0 V even if the ion balance is within ±30 V.

Continuous static neutralization run mode



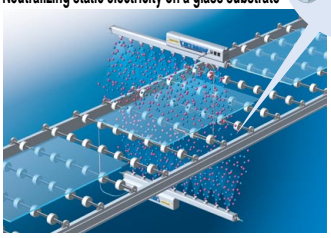
Mode		Ion emission waveform
Sensing AC	Energy saving run	+ / − Stop
	Continuous static neutralization run	+ / −
AC (Without sensor)		+ / −
Workpiece electrification		⊕⊕⊕⊕⊕ Static neutralization completion

Neutralizing static electricity on an electric substrate



·Prevents element disruption due to discharge.
·Prevents adhesion of dust.

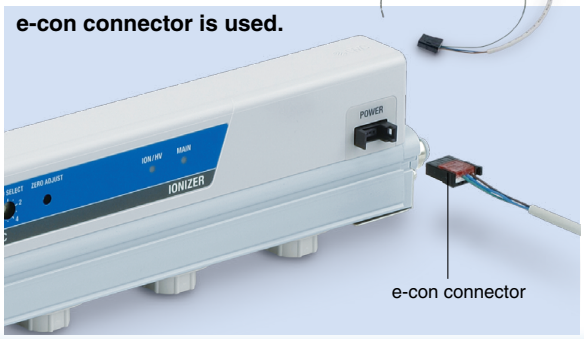
Neutralizing static electricity on a glass substrate



·Prevents breakage due to adhesion and discharge.
·Prevents adhesion of dust.

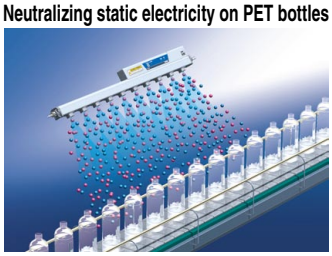
- **AC adapter power supply is available.**

e-con connector is used.



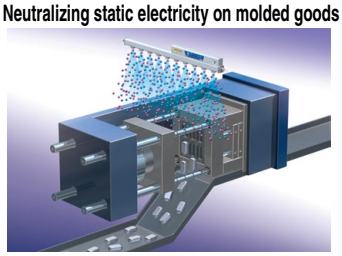
Suitable for static neutralization of resin and rubber pieces (small parts).

Neutralizing static electricity on PET bottles



·Trip-resistance during conveying
·Prevents adhesion of dust.

Neutralizing static electricity on molded goods



·Improves detachability of molded goods from a die.

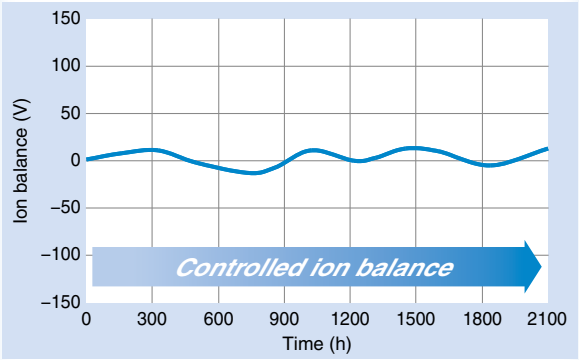
Reduction of adjustment and maintenance labor by auto balance sensor IZS41 IZS42

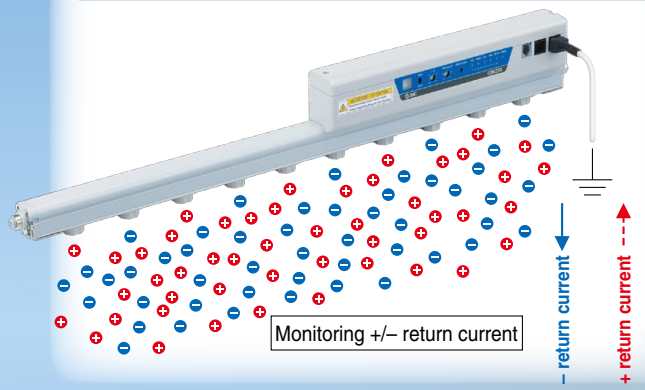
Built-in type (Standard)

The sensor is installed within the ionizer body and may be mounted anywhere.

Monitoring the amount of ion emitted from an ionizer, the auto balance sensor maintains the initial ion balance by adjusting the +/– ion supply rate.

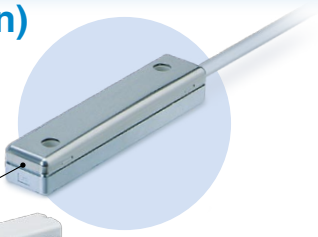
Ion balance (image)





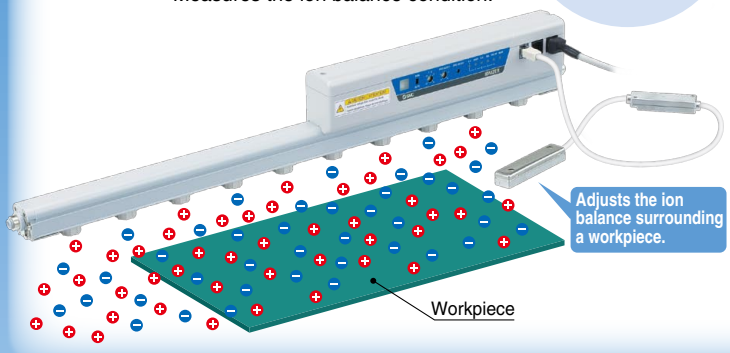
High accuracy type (Option)

- **The ion balance near the workpiece is accurately adjusted.**
- **The object is not affected by the height of installation or any disturbance interference.**



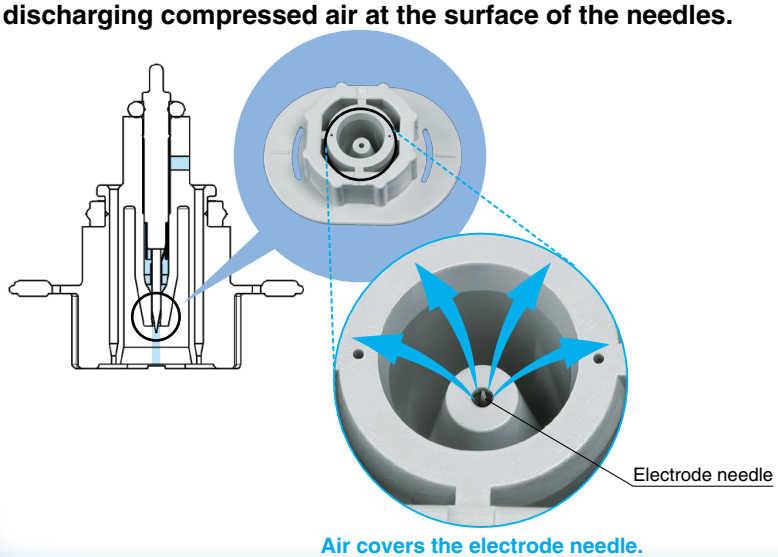
Auto balance sensor

Measures the ion balance condition.



Low maintenance electrode cartridges are used. IZS40 IZS41 IZS42

- **Minimizes contamination of electrode needles by discharging compressed air at the surface of the needles.**



Air covers the electrode needle.

- **2 types of electrode needle materials**

Tungsten : **Ion balance ±30 v**
Single crystal silicon: **Ion balance ±30 v, suitable for neutralizing static electricity of silicon wafer**

Tungsten
(Cartridge color: White)

Silicon
(Cartridge color: Gray)

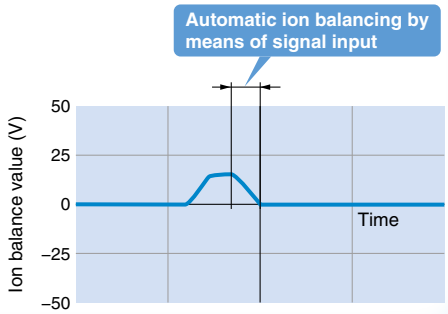
Refer to page 5 for Models and Functions.

Setting ionizer with remote controller IZS41 IZS42

- May be used to adjust and set several ionizers remotely.
- Can recognize and control up to 16 ionizers through address setting.
- Frequency setting
- Ion balance adjustment
- Electrode contamination detection alarm level can be adjusted (3 levels).
- Built-in sensor valid/invalid may be selected.

- "Ion balance adjustment at external signal input" or "Ion balance adjustment at any time" can be selectable.

The auto balance sensor may be connected only when adjusting the ion balance.

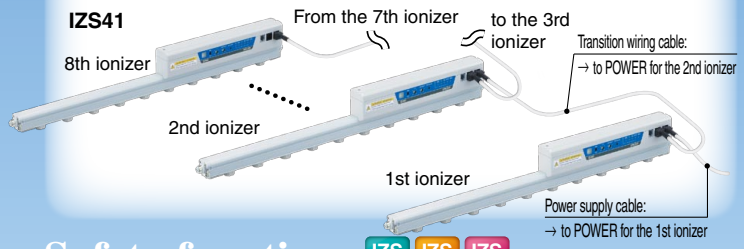


Transition wiring may be used. IZS41 IZS42

Total number of ionizers that may be connected IZS41: Max. 8 units. IZS42: Max. 5 units.
<Conditions> Bar length 340 to 2500 mm, Power supply cable 3 m, Transition wiring cable 2 m

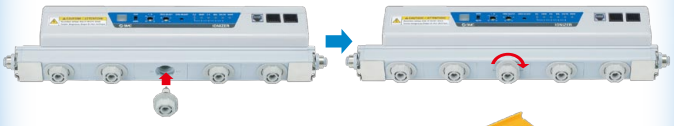
Reduces man hours required for connecting wires to the power supply.

IZS41

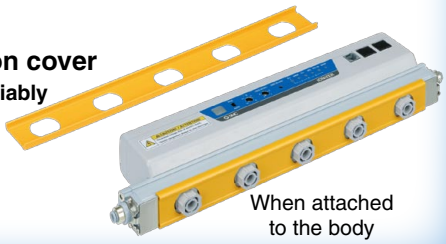


Safety functions IZS40 IZS41 IZS42

- **Electrode cartridge drop prevention function**
  Locking by double-action

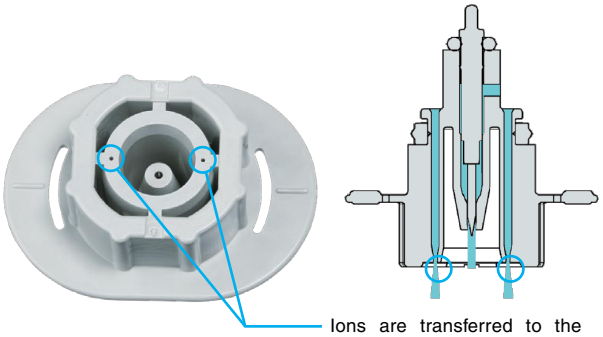


- **Drop prevention cover**
  Can even more reliably prevent electrode cartridges from dropping off.



- **High speed static neutralization cartridges and energy saving static neutralization cartridges are available.**

High speed de-ionizing cartridge

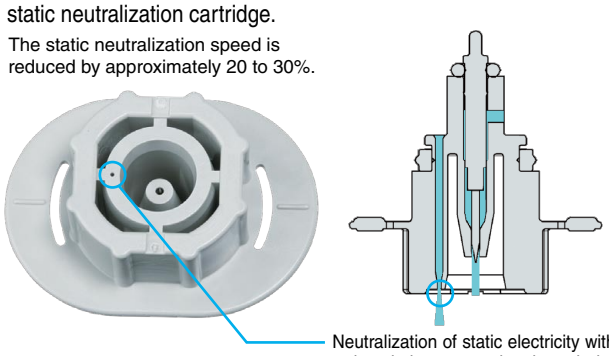


Ions are transferred to the workpieces efficiently by using two pneumatic nozzles to improve the static neutralization performance.

Energy saving type de-ionizing cartridge

The flow rate consumption of the energy-saving static neutralization cartridge is approximately **50%** less than that of the high speed static neutralization cartridge.

The static neutralization speed is reduced by approximately 20 to 30%.



Neutralization of static electricity with reduced air consumption through the use of one pneumatic nozzle.

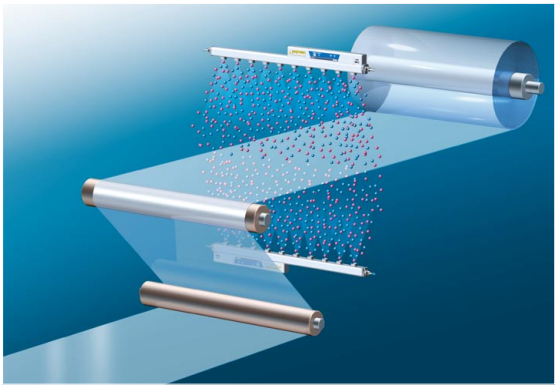
Application Examples

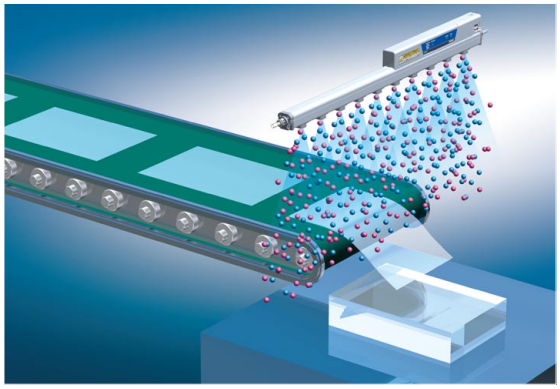
Neutralizing static electricity from films

· Prevents adhesion of dust. · Prevents winding failure due to wrinkles etc.



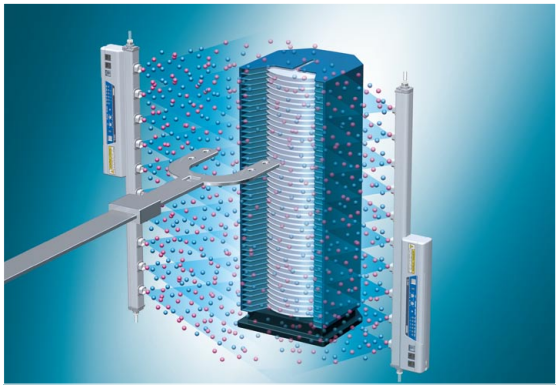
Neutralizing static electricity on film molded goods

· Prevents attaching to conveyer. · Prevents dispersion of finished goods.



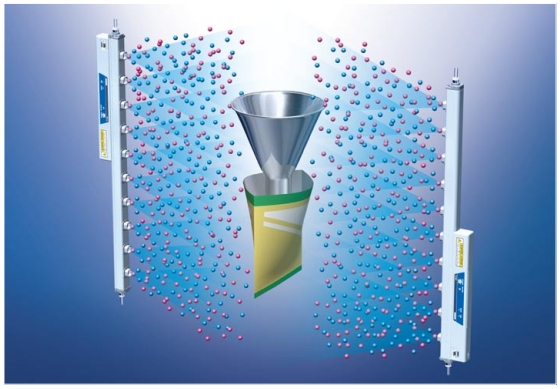
Neutralizing static electricity during wafer transfer

· Prevents breakage due to discharge between wafers and hands.



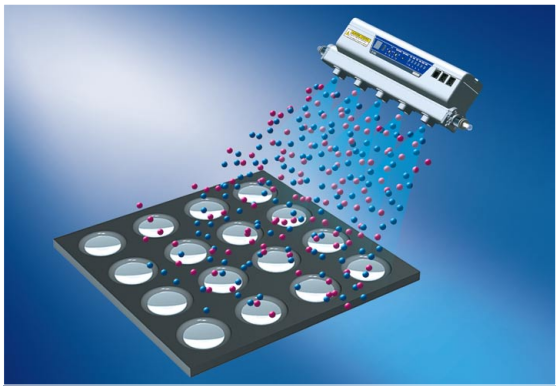
Neutralizing static electricity from packing films

· Prevents the filled substance from adhering to the packing film. · Reduces packing mistakes.



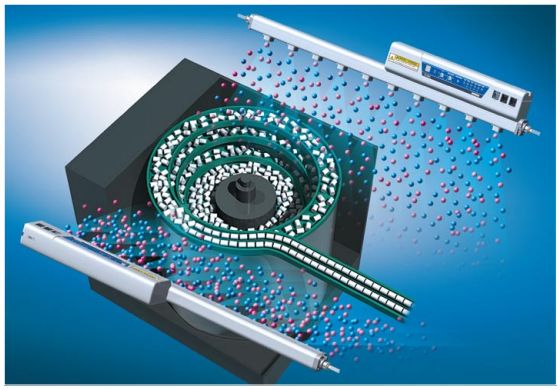
Neutralizing static electricity from lens

· Removes dust from lens. · Prevents adhesion of dust.



Neutralizing static electricity from parts feeder

· Prevents clogging of parts feeder.



Technical Data

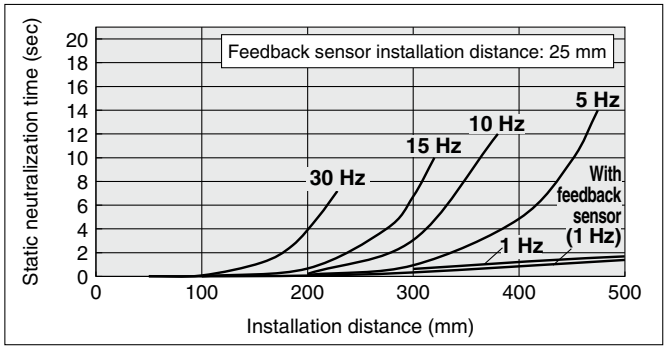
Note) Static neutralization features are based on the data using the charged plate (size: 150 mm x 150 mm, capacitance: 20 pF) as defined in the U.S. ANSI standards (ANSI/ESD, STM3.1-2006). Use this as a guideline purpose only for model selection because the value varies depending on the material and/or size of a subject.

Static Neutralization Characteristics

① Installation Distance and De-ionization Time (Static Neutralization from 1000 V to 100 V)

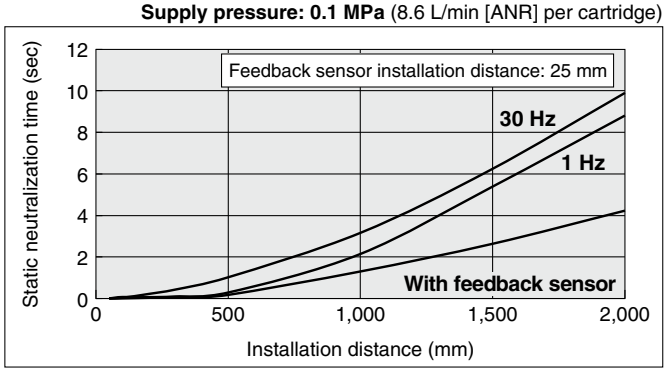
IZS40, 41

1) Without air purge

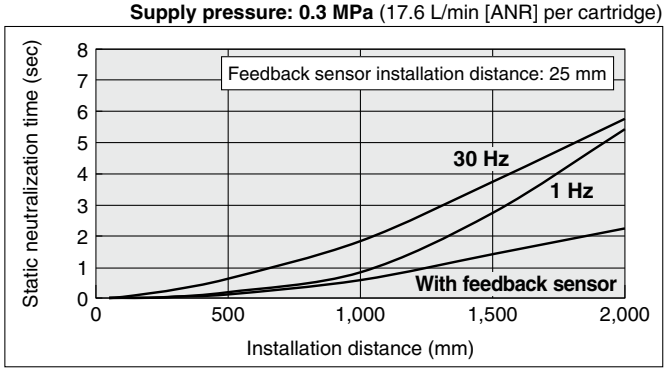


2) With high speed de-ionizing cartridge, With air purge

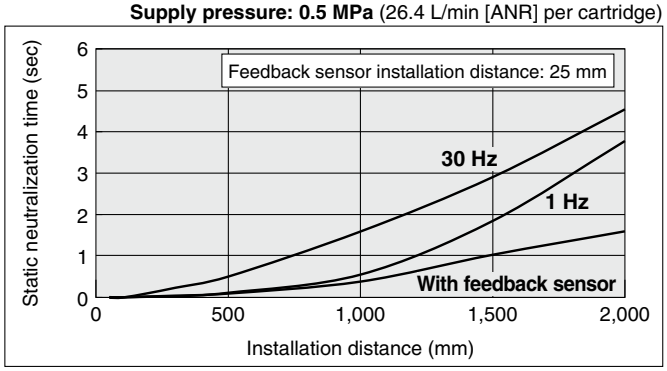
Supply pressure: 0.1 MPa (8.6 L/min [ANR] per cartridge)



Supply pressure: 0.3 MPa (17.6 L/min [ANR] per cartridge)

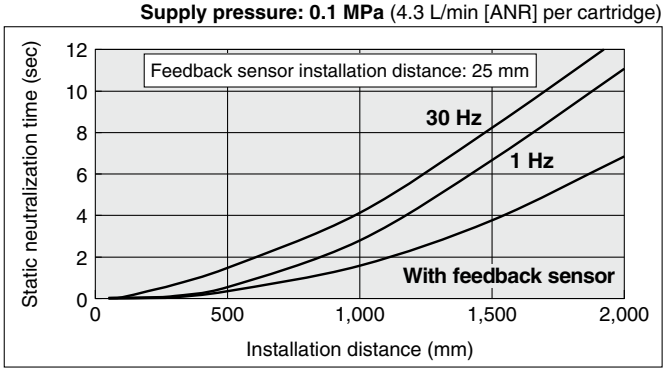


Supply pressure: 0.5 MPa (26.4 L/min [ANR] per cartridge)

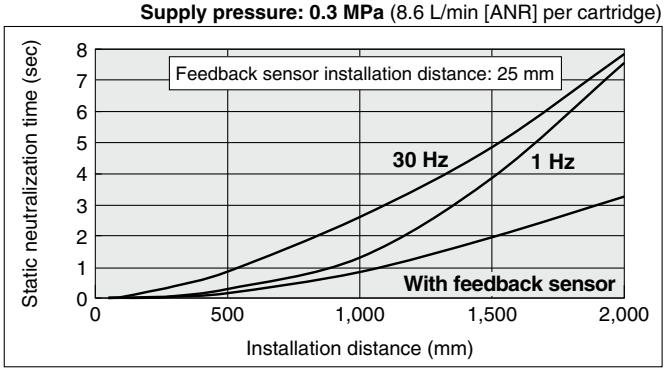


3) With energy saving type de-ionizing cartridge, With air purge

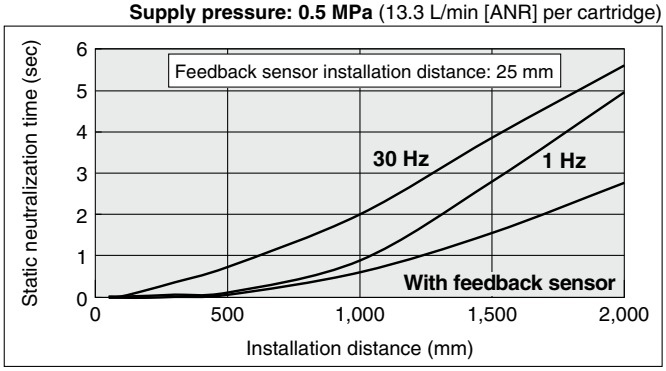
Supply pressure: 0.1 MPa (4.3 L/min [ANR] per cartridge)



Supply pressure: 0.3 MPa (8.6 L/min [ANR] per cartridge)

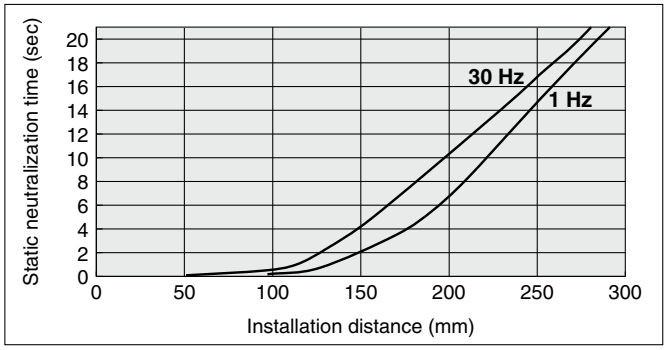


Supply pressure: 0.5 MPa (13.3 L/min [ANR] per cartridge)



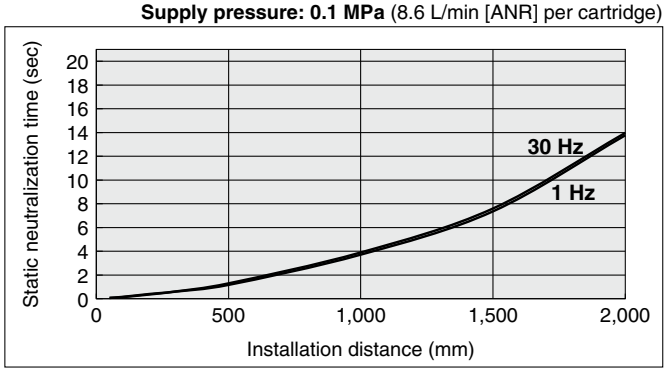
IZS42

1) Without air purge

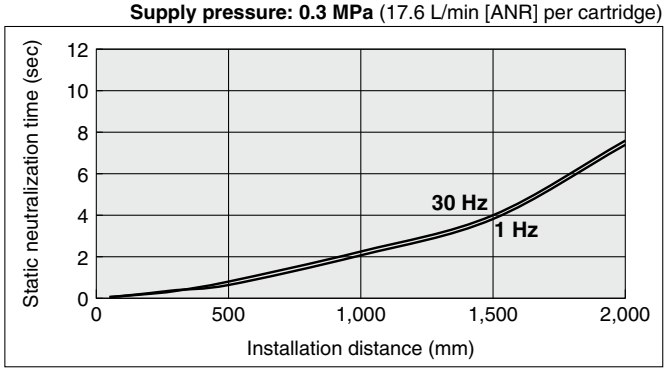


2) With high speed de-ionizing cartridge, With air purge

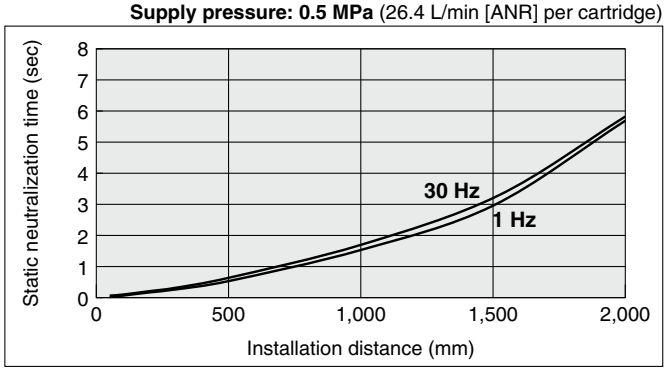
Supply pressure: 0.1 MPa (8.6 L/min [ANR] per cartridge)



Supply pressure: 0.3 MPa (17.6 L/min [ANR] per cartridge)

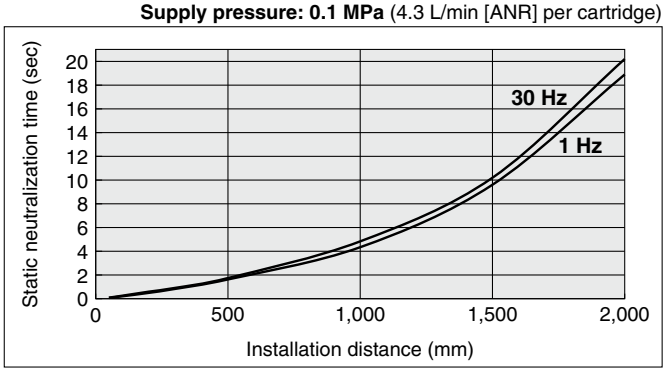


Supply pressure: 0.5 MPa (26.4 L/min [ANR] per cartridge)

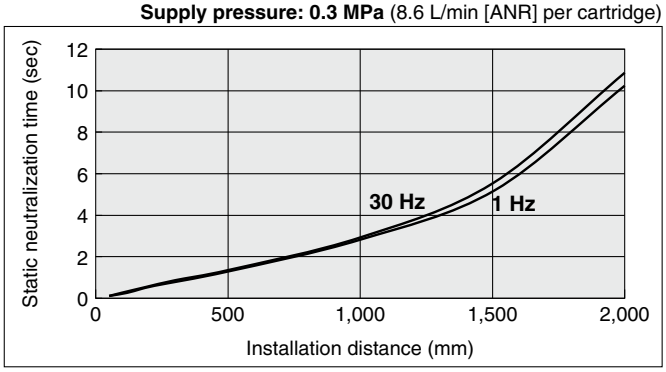


3) With energy saving type de-ionizing cartridge, With air purge

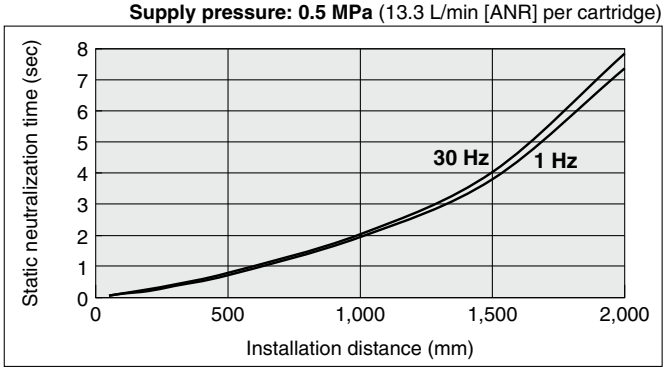
Supply pressure: 0.1 MPa (4.3 L/min [ANR] per cartridge)



Supply pressure: 0.3 MPa (8.6 L/min [ANR] per cartridge)



Supply pressure: 0.5 MPa (13.3 L/min [ANR] per cartridge)



Static Neutralization Characteristics

Note) Static neutralization features are based on the data using the charged plate (size: 150 mm x 150 mm, capacitance: 20 pF) as defined in the U.S. ANSI standards (ANSI/ESD, STM3.1-2006). Use this as a guideline purpose only for model selection because the value varies depending on the material and/or size of a subject.

② Static Neutralization Range

IZS40, 41

Frequency: 30 Hz

1) Supply pressure: 0 MPa

Note 2) Use standard power supply cables for 2 m, 5 m and 8 m lengths.
Note 3) Transition wiring is not possible for the IZS40.

Electrode needle cleaning kit/IZS30-M2

Wiring/IZS40

Wire cables according to the circuitry and wiring chart.

1. Grounding of F.G. cable

Make sure to ground the F.G. cable (green) with a resistance of 100 Ω or less.

The F.G. cable is used as a reference electric potential for de-ionization. If the ground terminal F.G. is not properly grounded, the ionizer will not achieve the optimal ion balance. Therefore, please connect the ground terminal using a resistance of 100 Ω or less.

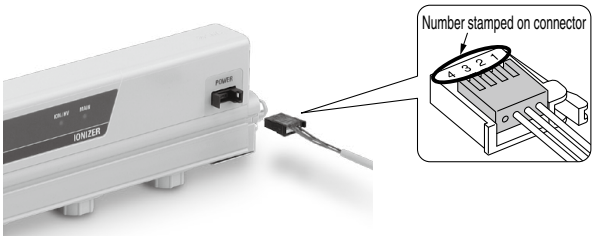
2. Connection circuit ("POWER" connector)

Wiring of the IZS40

e-con is adopted for the connector of the IZS40.

Connector with cable or without cable may be selected when placing an order for the power supply cable.

When only an e-con is required, place an order for it as a part. (Cable is not supplied.)

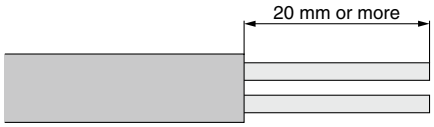


Wiring

Number stamped on connector	Description	Description
1	24 VDC	Power supply is connected to operate the ionizer.
2	GND	
3	F.G.	Make sure to ground with a resistance of 100 Ω or less to use it as a reference electric potential for ionizer.
4	—	Unused

How to connect the cable of the connector

1) Cut the cable as shown in the figure to the below. Refer to the following table for the applicable wire size.



Applicable wire

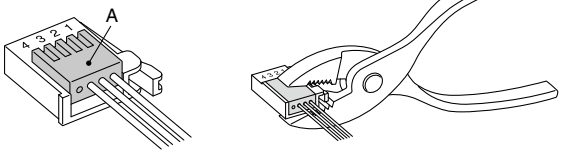
AWG No.	Conductor cross section mm^2	Finish O.D. mm	Model
26-24	0.14-0.2	ø0.8-ø1.0	ZS-28-C

2) Insert the cable which was cut into the back of the connector.

3) Confirm that the cable is inserted into the back of the connector and press part A with your finger to hold tentatively.

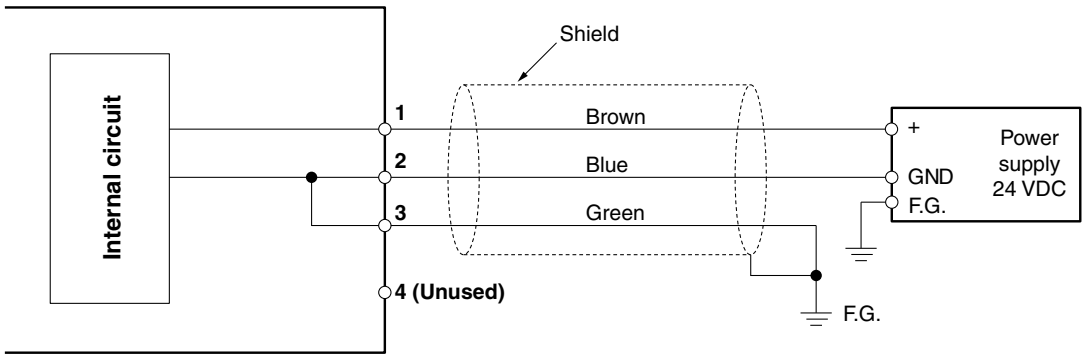
4) Use a tool such as pliers to firmly tighten the center of Part A.

5) The connector cannot be reused once crimped. If cable insertion fails, use a new connector.



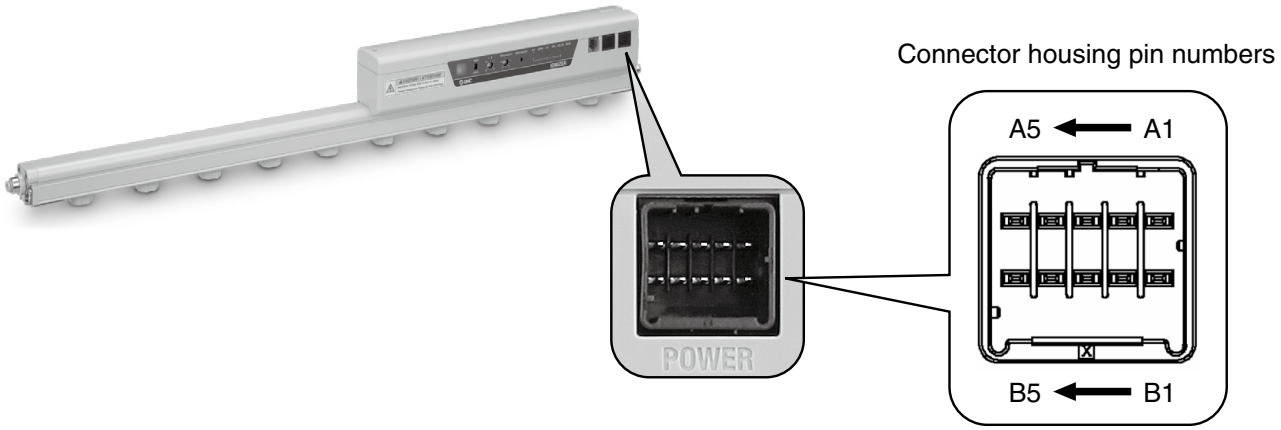
Connection Circuit/IZS40

Ionizer (IZS40)



If cables are prepared by the user, the cable colors shown in the diagram may change according to the cable colors by the user.

Wiring/IZS41, 42



Wiring

Pin no.	Cable color	Description	Signal direction	Description
A1	Brown	24 VDC	IN	Power supply is connected to operate the ionizer.
B1				
A2	Blue	GND	IN	
B2				
A3	Green	F.G.	—	Make sure to ground with a resistance of 100 Ω or less to use it as a reference electric potential for ionizer.
B3	Light green	Discharge stop signal	IN	Signal input to turn ON/OFF the ion discharge. NPN specification: Stops ion discharge by connecting to GND. (Starts discharging ion when disconnected.) PNP specification: Stops ion discharge by connecting to + 24 VDC. (Starts discharging ion when disconnected.)
A4	Gray	Electrode contamination detection signal	IN	Input signal when determining the necessity of electrode needle maintenance.
B4	Yellow	Maintenance signal	OUT(Contact point A)	Turns ON when electrode needs cleaning.
A5	Purple	Error signal	OUT(Contact point B)	Turns OFF when power supply failure, ion discharge error, connected sensor failure, or CPU operation failure. (ON when there is no problem.)
B5	White	Unused	—

⚠ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1), and other safety regulations.

⚠ Caution: **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

⚠ Warning: **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

⚠ Danger : **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

*1) ISO 4414: Pneumatic fluid power – General rules relating to systems.
ISO 4413: Hydraulic fluid power – General rules relating to systems.
IEC 60204-1: Safety of machinery – Electrical equipment of machines. (Part 1: General requirements)
ISO 10218-1: Manipulating industrial robots – Safety.
etc.

⚠Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.
Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.
The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

⚠Caution

1. The product is provided for use in manufacturing industries.
The product herein described is basically provided for peaceful use in manufacturing industries.
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.
If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements".
Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

***2) Vacuum pads are excluded from this 1 year warranty.**
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

Series IZS40/41/42
Specific Product Precautions 1

Be sure to read this before handling.

Selection

⚠Caution

1. This product is intended to be used with general factory automation (FA) equipment.

If considering using the product for other applications (especially those stipulated on Safety Instructions), please consult SMC beforehand.

2. Use this product within the specified voltage and temperature range.

Using outside of the specified voltage can cause a malfunction, damage, electrical shock, or fire.

3. Use clean compressed air as fluid. (Air quality Class 2.6.3 specified in ISO 8573-1: 2001 is recommended.) This product is not explosion proof. Never use a flammable gas or an explosive gas as a fluid and never use this product in the presence of such gases.

Please contact us when fluids other than compressed air are used.

This product is not explosion proof. Never use a flammable gas or an explosive gas as a fluid and never use this product in the presence of such gases. Please contact us when fluids other than compressed air are used.

4. This product is not explosion-protected.

Never use this product in locations where the explosion of dust is likely to occur or flammable or explosive gases are used. This can cause fire.

⚠Caution

1. Clean specification is not available with this product.

This product is not washed. When bringing into a clean room, flush for several minutes and confirm the required cleanliness before using. A minute amount of particles are generated due to wearing of the electrodes while the ionizer is operating.

Mounting

⚠Warning

1. Reserve an enough space for maintenance, piping and wiring

Please take into consideration that the one-touch fittings for supplying air, need enough space for the air tubing to be easily attached/detached.

To avoid excessive stress on the connector and one-touch fitting, please take into consideration the cable and tube minimum bending radius and avoid bending at acute angles.

Wiring with excessive twisting, bending, etc. can cause a malfunction, wire breakage or fire.

Minimum bending radius: Power supply cable: 38 mm
Transition wiring cable: 38 mm
Sensor cable: 25 mm

Note: Shown above is wiring with the fixed minimum allowable bending radius and at a temperature of 20 °C. If used under this temperature, the connector can receive excessive stress even though the minimum bending radius is allowable.

Regarding the minimum bending radius of the tubing, refer to the operation manual or catalog for tubing.

2. Mount this product on a plane surface.

If there are irregularities, cracks or height differences, excessive stress will be applied to the housing or brackets, resulting in damage or other trouble. Also, do not drop or apply a strong shock. Otherwise, damage or an accident can occur. Also, do not drop or apply a strong shock. Otherwise, damage or an accident may occur.

Mounting

⚠Warning

3. Install the product so that the entire bar does not have an excessive deflection.

For a bar length of 820 mm or more, support the bar at both ends and in the middle by using brackets (IZS40-BM). If the bar is held only at the both ends, self-weight of the bar causes deflection, resulting in damage to the bar.

4. Do not use this product in an area where noise (electric magnetic field or surge voltage, etc.) are generated.

Using the ionizer under such conditions may cause it to malfunction or internal devices to deteriorate or break down. Take noise countermeasures and prevent the lines from mixing or coming into contact with each other.

5. Observe the tightening torque requirements when installing the ionizer.

If overtightened with a high torque, the mounting screws or mounting brackets may break. Also, if under tightened with a low torque, the connection may loosen.

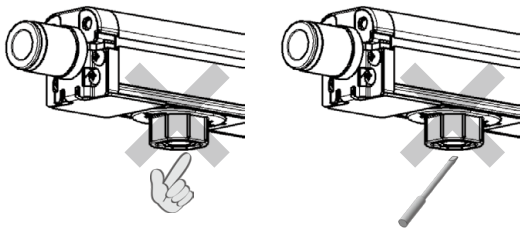
Refer to the operation manual for details.

6. Do not touch the electrode needle directly with fingers or metallic tools.

If a finger is used to touch the electrode, it may get stuck or an injury or electrical shock may occur from touching the surrounding equipment. In addition, if the electrode needle or cartridge is damaged with a tool, the specification will not be met and damage and/or an accident may occur.

⚠Danger High Voltage

Electrode needles are under high voltage. Never touch them as there is a danger of electric shock or injury due to an evasive action against a momentary electrical shock caused by inserting foreign matter in the electrode cartridge or touching the electrode needle.



7. Do not affix any tape or seals to the body.

If the tape or seal contains any conductive adhesive or reflective paint, a dielectric phenomenon may occur due to ions arising from such substances, resulting in electrostatic charging or electric leakage.

8. Installation should be conducted after turning off the power supply.

⚠Caution

1. Install the IZS4□ series away from a wall as illustrated below.

If a wall is located closer than the illustration below, the ions generated will not be able to reach the object which requires static neutralization and therefore result in a decrease in efficiency.

Unit: mm

Specific Product Precautions 2

Be sure to read this before handling.

Mounting

⚠Caution

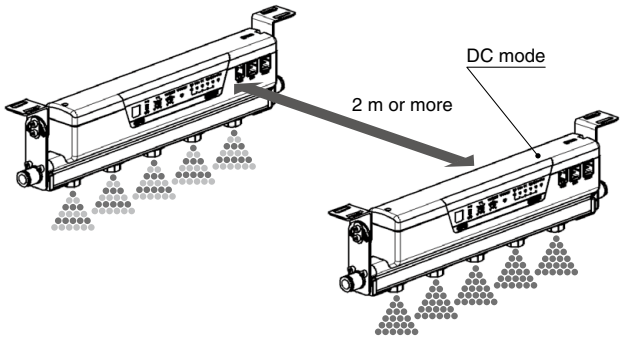
2. After installation, be sure to verify the effects of static neutralization.

The effects vary depending on the ambient conditions, operating conditions, etc. After installation, verify the effects of static neutralization.

3. When installing the IZS41 or IZS42 in proximity with an ionizer which operates in DC mode, they should be positioned at least 2 meters away from each other.

When using the IZS41 or IZS42 near the ionizer in DC mode, keep clearance of at least 2 m between them.

Ion balance may not be adjusted by the internal sensor due to the ions which are discharged from the DC mode ionizer.



Wiring/Piping

⚠Warning

1. Confirm that the power supply voltage is enough and that it is within the specifications before wiring.

2. To maintain product performance, a DC power supply shall be connected per UL listed Class 2 certified by National Electric Code (NEC) or evaluated as a limited power source provided by UL60950.

3. To maintain the product performance, ground the product with an earth ground cable with a resistance of 100 Ω or less according to this manual.

4. Be sure to turn off the power supply before wiring (including attachment/detachment of the connector).

5. To connect a feedback sensor or auto balance sensor to the ionizer, use the cable included with the sensor. Do not disassemble or modify the ionizer.

6. When applying the power supply, pay special attention to the wiring and/or surrounding environment until the safety is confirmed.

7. Do not connect or remove any connectors including the power supply, while power is being supplied. Otherwise, the ionizer may malfunction.

8. If the power line and high-pressure line are routed together, this product may malfunction due to noise. Therefore, use a separate wiring route for this product.

9. Be sure to confirm that there are no wiring errors before starting this product. Faulty wiring will lead to product damage or malfunction.

10. Flush the piping before using. Before piping this product, exercise caution to prevent particles, water drops, or oil contents from entering the piping.

Wiring/Piping

⚠Warning

11. Transition wiring of ionizer

For transition wiring of ionizers, use a transition wiring cable for connection between ionizers. Use a power supply cable for connection between ionizer and power supply or external equipment. (Transition wiring is not possible with the IZS40.) The number of ionizers that may be connected using transition wiring varies depending on the power supply cable; the length of the transition wiring cable; the use of external sensor(s) and/or models. Refer to the table shown below "Connectable number of ionizers with transition wiring".

The IZS41 and IZS42 can be connected in the same transition wiring, but mixed wiring of the NPN and PNP I/O specifications is not possible.

Please contact SMC when connecting conditions other than specified in the table below are applied.

Connectable number of ionizers (IZS41) with transition wiring (without external sensor)

Bar length symbol	Power supply cable length: 3 m										Power supply cable length: 10 m									
	Transition wiring cable length (same cable length) m										Transition wiring cable length (same cable length) m									
	1	2	3	4	5	6	7	8	9	10	1	2	3	4	5	6	7	8	9	10
340																				
400												7 units	6 units							
460				7 units																
580											8 units									
640																				
820	8 units					5 units			4 units					5 units				4 units		
1120																				
1300				6 units								6 units								
1600			7 units																	
1900											7 units									
2320																			3 units	
2500																				

Connectable number of ionizers (IZS42) with transition wiring (without external sensor)

Bar length symbol	Power supply cable length: 3 m										Power supply cable length: 10 m									
	Transition wiring cable length (same cable length) m										Transition wiring cable length (same cable length) m									
	1	2	3	4	5	6	7	8	9	10	1	2	3	4	5	6	7	8	9	10
340																				
400																				
460

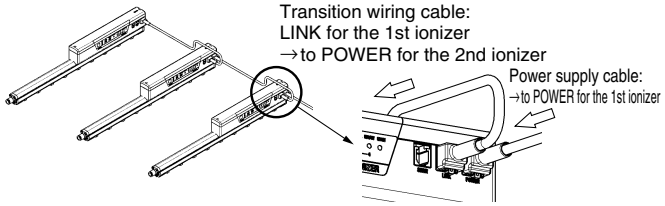
640																				
820			5 units				4 units				5 units			4 units				3 units		
1120																				
1300																				
1600																				
1900																				
2320									3 units											
2500																				

It is recommended that the power supply used to operate the ionizers have a current capacity twice that of the total current consumption of the ionizers to be used. Power supply voltage should be from 24 to 26.4 VDC.

AC adapter must not be used when ionizer is used in a transition wiring.

When ionizers are connected with transition wiring, the same input signal serves as input to all the ionizers. When a signal is output from at least one ionizer in the connection, the signal will be output from the power supply cable.

Connect the power supply cable to the "POWER" connector of the 1st ionizer, and connect the "LINK" connector of the 1st ionizer to the "POWER" connector of the 2nd ionizer with a transition wiring cable. Follow the same procedure to connect subsequent ionizer(s) and after with transition wiring cables.



Specific Product Precautions 3

Be sure to read this before handling.

Operating Environment/Storage Environment

⚠Warning

1. Observe the fluid temperature and ambient temperature range.

Fluid temperature and ambient temperature ranges are; 0 to 40°C for ionizer, 0 to 50°C for feedback sensor and auto balance sensor (high accuracy type), 0 to 40°C for AC adapter, and 0 to 45°C for remote controller. Do not use the sensor in locations where the temperature may change suddenly even if the ambient temperature range is within the specified limits, resulting in condensation.

2. Do not use this product in an enclosed space.

This product utilizes a corona discharge phenomenon. Do not use the product in an enclosed space as ozone and nitrogen oxides exist in such places, even though in marginal quantities.

3. Environments to avoid

Avoid using and storing this product in the following environments since they may cause damage to this product.

a. Avoid using in a place that exceeds an ambient temperature range.
b. Avoid using in a place that exceeds an ambient humidity range.
c. Avoid using in a place where condensation occurs due to a drastic temperature change.
d. Avoid using in a place in the presence of corrosive or explosive gas or where there is a volatile combustible.
e. Avoid using in an atmosphere where there are particles, conductive iron powders, oil mist, salt, solvent, blown dust, cutting oil (water, liquid), etc.
f. Avoid using in a place where ventilated air from an air conditioner is directly applied to the product.
g. Avoid using in a closed place without ventilation.
h. Avoid using in direct sunlight or radiated heat.
i. Avoid using in a place where there is a strong magnetic noise (strong electric field, strong magnetic field, or surge).
j. Avoid using in a place where static electricity is discharged to the body.
k. Avoid using in a place where a strong high frequency occurs.
l. Avoid using in a place where this product is likely to be damaged by lightning.
m. Avoid using in a place where direct vibration or shock is applied to the main body.
n. Avoid using in a place where there is a force large enough to deform this product or weight is applied to the product.

4. Do not use an air containing mist or dust.

The air containing mist or dust will cause the performance to decrease and shorten the maintenance cycle.
Install a dryer (IDF series), air filter (AF/AFF series), and/or mist separator (AFM/AM series) to obtain clean compressed air (air quality of Class 2.6.3 or higher according to ISO 8573-1: 2001 is recommended for operation).

5. Ionizer, feedback sensor, auto balance sensor, remote controller, and AC adapter are not resistant to lightening surge.

Maintenance

⚠Warning

1. Periodically inspect the ionizer and clean the electrode needles.

Periodically inspect the electrostatic sensor to check if it is operated while being out of order. Only a person having an adequate knowledge and experience about the system is allowed to inspect the sensor. If particles attach to the electrode needle by using for long periods of time, the static neutralizing performance will be lowered.
Replace the electrode cartridge, if the pins are rough and the static neutralizing performance does not return even after being cleaned.

⚠Danger High Voltage

This product contains a high voltage generation circuit. When performing maintenance inspection, be sure to confirm that the power supply to the ionizer is turned off. Never disassemble or modify the ionizer, as this may not only impair the product's functionality but could cause an electric shock or electric leakage.

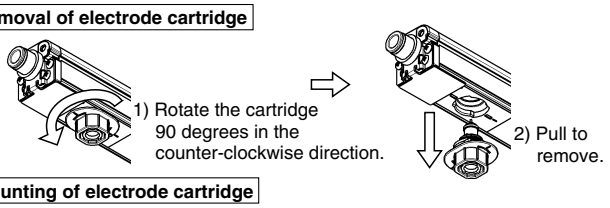
Maintenance

⚠Warning

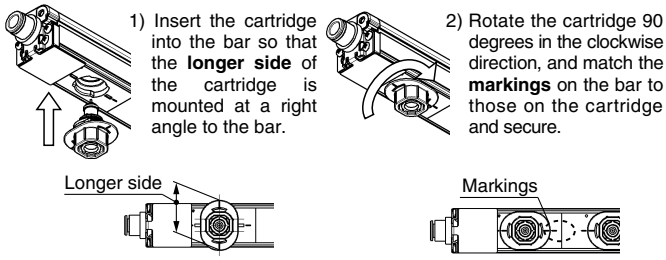
2. When cleaning the electrode needle or replacing the electrode cartridge, be sure to turn off the power supply or air supply to the body.

Touching an electrode needle when it is electrified may result in electric shock or other accidents.
If the electrodes are touched while the product is energized, this may cause an electric shock or accident.
If an attempt to replace the cartridges is performed before removing air supply, the cartridges may eject unexpectedly due to presence of the supply air. Remove air supply before replacing the cartridges. If cartridges are not securely mounted to the bar, they may eject or release when air is supplied to the product. Securely mount or remove the cartridges referencing the instructions shown below.

Removal of electrode cartridge



Mounting of electrode cartridge



3. Perform the detection procedure in the absence of workpieces. (IZS41, 42)

4. Do not disassemble or modify this product.

Otherwise, an electrical shock, damage and/or a fire may occur. Also, the disassembled or modified products may not achieve the performances guaranteed in the specifications, and exercise caution because the product will not be warranted.

5. Do not operate this product with wet hands.

Otherwise, an electrical shock or accident may occur.

Handling

⚠Caution

1. Do not drop, bump or apply excessive impact (100 m/s² or more) while handling.

Even though it does not appear to be damaged, the internal parts may be damaged and cause a malfunction.

2. When installing the product, handle the product so that no moment is applied to the controller and the ends of the bar.

Handling the product by holding either end of the bar may cause damage to the product.

3. When mounting/dismounting the cable, use your finger to pinch the claw of the plug, then attach/detach it correctly.

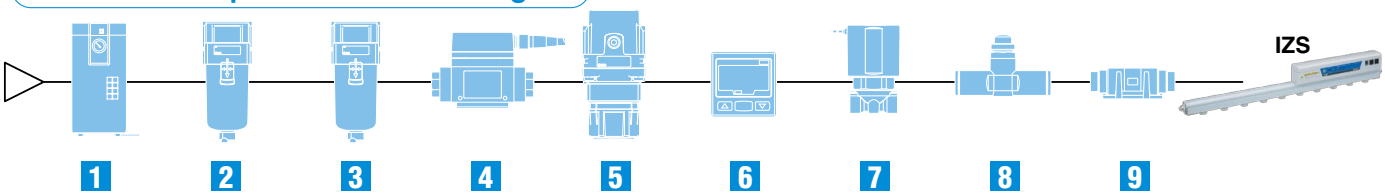
If the modular plug is at a difficult angle to attach/detach, the jack's mounting section may be damaged and cause a disorder.

Related Products

SMC can provide all the equipment required to supply air to the ionizer.

Consider the equipment below not only for providing an "opportunity to decrease maintenance" and "preventing damage" but also for an "energy-saving countermeasure".

Recommended pneumatic circuit diagram



1 Air Dryer/Series IDF

Decreases the dew point of compressed air.
Limits moisture generation which can lead to damage.

Best Pneumatics No.⑤

2 Air Filter/Series AF

Eliminates solid foreign matter such as powder particles in the compressed air.

Best Pneumatics No.⑤

3 Mist Separator/Series AFM

Eliminates oil mist which is difficult to eliminate with an air filter.

Best Pneumatics No.⑤

4 Digital Flow Switch/Series PF2A

Decreases the air consumption by flow control.

Best Pneumatics No.⑥

2-Color Display Digital Flow Switch/Series PFM

Best Pneumatics No.⑥

5 Regulator/Series AR

Decreases the air consumption by setting to an appropriate pressure.

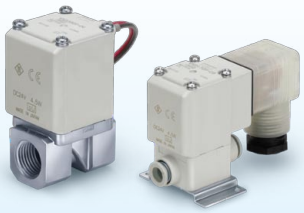
Best Pneumatics No.⑤

6 Digital Pressure Switch/Series ISE30A

The pressure control prevents the ability of static electricity removal from being reduced in accordance with the reduction of air pressure.

Best Pneumatics No.⑥

7 2 Port Solenoid Valve/Series VX



Best Pneumatics No.⑦

Pilot Type 2 Port Solenoid Valve for Dry Air/Series VQ

Best Pneumatics No.⑦

8 Restrictor/Series AS-X214

Regulates to the appropriate air volume depending upon the installation condition.
Decreases the air consumption.

Best Pneumatics No.⑥

9 Clean Air Filter/Series SFD

Built-in capillary element nominal filtration rating: 0.01 µm
Hollow fiber elements with over 99.99% filtering efficiency do not contaminate work pieces.

Best Pneumatics No.⑤

Ionizer Series Variations

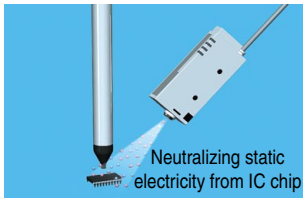
Ionizer/Nozzle type *Series IZN10*

Dust removal and static neutralization by air blow

- Eliminates dust clinging to lamp cover.

Spot type static neutralization

- Prevents electrostatic breakdown of electric parts.
- Prevents detachment failure.



Ion balance ±10 V (In case of energy saving static neutralization nozzle)

Slim design: Thickness dimension 16 mm

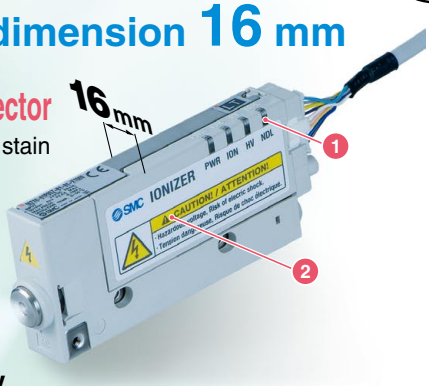
1 Electrode needle contamination detector

Outputs maintenance signal when detects stain or wear of an electrode needle always.

Detects optimal maintenance time, reduced labor for maintenance.

2 Built-in power supply substrate

High-voltage power supply cable/ external high-voltage power supply are unnecessary.



Ionizer/Fan type *Series IZF10*

Compact fan type with simple functions

- **Compact design: 80 x 110 x 39 mm**
- **Weight: 280 g**
- **2 types of fans available**
  - ◎**Static neutralization time: 1.5 seconds**
    (When neutralizing static electricity from 1000 V to 100 V at a distance of 300 mm from the workpiece)
  - ◎**Low-noise fan: 48 dB (A) (Measured at a distance of 300 mm from the workpiece)**
    Rapid static neutralizing fan: 57 dB (A)
- **Ion balance*: ±13 V**
  * Based on ANSI/ESD-STM3.1-2006 standards
- **With alarm function**
  High-voltage error, electrode needle contamination detector

Electrostatic Sensor *Series IZD10*/Electrostatic Sensor Monitor *Series IZE11*

Electrostatic Sensor *Series IZD10*

The importance of the static electric control is put on confirming the "actual status".

- **Potential measurement: ±20 kV (detected at a 50 mm distance)**
  ±0.4 kV (detected at a 25 mm distance)
- **Detects the electrostatic potential and outputs in an analog voltage.**
  ·Output voltage: 1 to 5 V (Output impedance: Approx. 100 Ω)
- **Broadens your coverage of electrostatic potential measurement applications.**

Electrostatic Sensor Monitor *Series IZE11*

- **Output: Switch output x 2 + Analog output (1 to 5 V, 4 to 20 mA)**
- **Minimum unit setting: 0.001 kV (at ±0.4 kV), 0.1 kV (at ±20 kV)**
- **Display accuracy: ±0.5% F.S. ±1 digit or less**
- **Detection distance correction function (adjustable in 1 mm increments)**
- **Supports two types of sensors (±0.4 kV and ±20 kV) through range selection.**

Handheld Electrostatic Meter *Series IZH10*

The importance of the static electric control is put on confirming the "actual status".
Easy-to-use handheld electrostatic meter

- **Measurement range: ±20.0 kV**
- **Minimum display unit: 0.1 kV (±1.0 to ±20.0 kV)**
  0.01 kV (0 to ±0.99 kV)
- **Compact and lightweight: 85 g (excluding dry cell batteries)**
- **Backlight for reading in the dark**
- **LOW battery indicator**
- **Peak/Bottom value indication**
- **Zero-clear function**
- **Auto power-off function**

Revision history

Edition B * Excerpted from pages 1097 to 1124 of the Best Pneumatics No. 6 (Ver. 5).
RZ
