Many combinations available!

Standard type/Series CRB2

- Piping ports are located on the flat surface.
Fittings can be secured firmly, piping is also improved.
- Many variations of shaft-end shape (6 types)

Rotating angle: 90°, 180°, 270°
All series can rotate up to 270°.

The use of specially designed seals and stoppers now enables our compact vane type rotary actuators to rotate up to 270°. (Single vane type)

Interchangeable mounting pitch with the existing model

Mounting pitches A to C shown on the right and mounting hole diameters are interchangeable with the existing model.

D: Height is reduced compared to the existing model.

Shaft type variations

Six shaft options available (* The figures below show size 30 actuators.)

Direct mounting

The rotary actuator body can be mounted directly.

* Not possible for size 10 to 40 with unit(s)

The mounting position of the auto switch can be set freely.

The switch can be fixed in the desired position in the circumferential direction.

Connecting port location: Side ported or Axial ported

The port location can be selected according to the application.

(Size 10 to 40 with unit(s) are side ported only.)

Double vane type is standardized for 90° and 100°.

The outside dimensions of the double vane type are equivalent to those of the single vane type (except size 10). Double vane construction can get twice the torque of the single vane type.

Free Mount Type/Series CRBU2

Size: 10, 15, 20, 30, 40

● Possible to change the starting position as desired to suit the installation conditions.

Conventional: 4 directions → **8 directions**

* For single vane 90°
4 directions are used for size 10.

● **12% weight reduction**

Lighter installation can be achieved.

Direct Mounting of Body

Dimension "L" of the actuators is provided in the table below for JIS standard hexagon socket head cap screws. If these types of screw are used, their heads will fit in the mounting hole.

Reference Screw Size

| Size | L | Screw |
|------|-------|-------|
| 10 | 11.5* | M2.5 |
| 15 | 16 | M2.5 |
| 20 | 24.5 | M3 |
| 30 | 34.5 | M4 |
| 40 | 39.5 | M4 |

* Only the size 10 actuators have different L dimensions for single and double vane.
Double vane: L = 20.5
* Refer to page 7 for Q1 and Q2 dimensions.

Chamfered Position and Rotation Range: Top View from Long Shaft Side

Chamfered positions shown below illustrate the conditions of actuators when B port is pressurized.

Single vane

Double vane

* For size 40 actuators, a parallel key will be used instead of chamfer.

Note 1) For single vane type, the tolerance of rotating angle of 90°, 180°, 270° will be $^{+5}_0$ for size 10 only.

For double vane type, the tolerance of rotating angle of 90° will be $^{+5}_0$ for size 10 only.

Note 2) The chamfered position of the double vane type shows the 90° specification position.

⚠ Specific Product Precautions

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) for Rotary Actuator Precautions and Auto Switch Precautions.

Angle Adjuster Unit

⚠ Caution

1. Since the maximum angle of the rotating angle adjustment range will be limited by the rotation of the rotary actuator, make sure to take this into consideration when ordering.

| Rotating angle of rotary actuator | Rotating angle adjustment range |
|-----------------------------------|---------------------------------|
| 270^{+4}_0 | 0° to 230° (Size: 10, 40) * |
| | 0° to 240° (Size: 15, 20, 30) |
| 180^{+4}_0 | 0° to 175° |
| 90^{+4}_0 | 0° to 85° |

* The maximum adjustment angle of the angle adjuster unit for size 10 and 40 is 230°

2. Connecting ports are side ported only.
3. The allowable kinetic energy is the same as the specifications of the rotary actuator.
4. Use a 100° rotary actuator when you desire to adjust the angle to 90° using a double vane type.

Dimensions: Standard Type (With Angle Adjuster) 10, 15, 20, 30, 40

- For single vane type, the figures below show actuators for 90° (without unit) when the B port is pressurized.
For double vane type, the figures below show the intermediate rotation position when the A or B port is pressurized.

Chamfered Position and Rotation Range: Top View from Long Shaft Side

Chamfered positions shown below illustrate the conditions of actuators when B port is pressurized.

Single vane

Double vane

* For size 40 actuators, a parallel key will be used instead of chamfer.

Note 1) For single vane type, the tolerance of rotating angle of 90° , 180° , 270° will be $+5^{\circ}_0$ for size 10 only.

For double vane type, the tolerance of rotating angle of 90° will be $+5^{\circ}_0$ for size 10 only.

Note 2) The chamfered position of the double vane type shows the 90° specification position.

Note 3) Only size 10 has a different plate shape.

Construction

Single vane • Figures for 90° and 180° show the condition of the actuators when B port is pressurized, and the figure for 270° shows the position of the ports during rotation.

⚠ Specific Product Precautions

Be sure to read before handling. Refer to back cover for Safety Instructions, "Handling Precautions for SMC Products" (M-E03-3) for Rotary Actuator Precautions and Auto Switch Precautions.

Angle Adjuster Unit

⚠ Caution

1. Since the maximum angle of the rotating angle adjustment range will be limited by the rotation of the rotary actuator, make sure to take this into consideration when ordering.

| Rotating angle of rotary actuator | Rotating angle adjustment range |
|-----------------------------------|---------------------------------|
| 270° ⁺⁴ / ₀ | 0° to 230° (Size: 10, 40) * |
| | 0° to 240° (Size: 15, 20, 30) |
| 180° ⁺⁴ / ₀ | 0° to 175° |
| 90° ⁺⁴ / ₀ | 0° to 85° |

* The maximum adjustment angle of the angle adjuster unit for size 10 and 40 is 230°.

- Connecting ports are side ported only.
- The allowable kinetic energy is the same as the specifications of the rotary actuator.
- Use a 100° rotary actuator when you desire to adjust the angle to 90° using a double vane type.

Series CDRBU2WU

Dimensions: Free Mount Type (With Auto Switch and Angle Adjuster) 10

Double vane • Following figures show the intermediate rotation position when A or B port is pressurized.

Size: 10

Refer to page 27 for details of shaft type J.

- *1. The length is 24 when any of the following auto switches are used: D-90/90A/S99(V)/T99(V)/S9P(V)
The length is 30 when any of the following auto switches are used: D-97/93A
- *2. The angle is 60° when any of the following auto switches are used: D-90/90A/97/93A
The angle is 69° when any of the following auto switches are used: D-S99(V)/T99(V)/S9P(V)

The short shaft can be further shortened by machining it into a stepped round shaft with a double-sided chamfer. (If shortening the shaft is not required, indicate "*" for dimension Y.)

The standard chamfer may not be altered depending on the type of machining required.

- Applicable shaft type: W
- Equal dimensions are indicated by the same marker.
(If not specifying dimension C2, indicate "*" instead.)

Double Shaft

Symbol: A13

Applicable to single vane type only.
Shaft with through-hole

- Not available for size 10
- Minimum machining diameter for d1 is 0.1 mm.
- A parallel key is used on the long shaft for size 40.
- Applicable shaft type: W

The above figure shows the CRB2 series.

| 20 | ø2.5 to ø3.5 | |
| 30 | ø2.5 to ø4 | |
| 40 | ø2.5 to ø3 | |

Symbol: A16

Applicable to single vane type only.
A special end is machined onto both the long and short shafts, and a through-hole is drilled into both shafts. Female threads are machined into the through-holes, whose diameter is equivalent to the diameter of the pilot holes.

- Not available for size 10
- The maximum dimension L1 is, as a rule, twice the thread size.
(Example) For M5: L1 max. = 10 mm
- A parallel key is used on the long shaft for size 40.
- Applicable shaft type: W
- Equal dimensions are indicated by the same marker.

The above figure shows the CRB2 series.

Symbol: A20

The shafts are reversed.
(Both the long shaft and the short shaft are shortened.)

- A parallel key is used on the long shaft for size 40.
- Applicable shaft type: W
- Dimensions inside () are for double vane type of size 10.

The above figure shows the CRB2 series.

Symbol: A23

The long shaft can be further shortened by machining right-angle double-sided chamfer onto it.

(If altering the standard chamfer and shortening the shaft are not required, indicate "*" for both the L1 and X dimensions.)

- Since L1 is a standard chamfer, dimension E1 is 0.5 mm or more, and 1 mm or more with a shaft bore size of ø30 and ø40.

Rotary Actuator Series **CRB**□2 Component Unit

Auto Switch Unit and Angle Adjuster Unit

Series CRB2/CRBU2 Auto switch unit and/or angle adjuster unit can be mounted on the rotary actuator vane type.

* The rotary actuator with auto switch and angle adjuster is basically a combination of the auto switch unit and angle adjuster unit.
The items marked with ★ are additional parts required for connection (joint unit parts), and the items marked with ◆ are unnecessary.
Note) The figures show the CRB2 series.

Since the solid state switch for size 10 and 15 requires no switch block, the unit part number will be the P211070-13.

*3. Joint unit is required to retrofit the angle adjuster unit to a rotary actuator with auto switch or to retrofit the auto switch unit to a rotary actuator with angle adjuster.

Series CRB□2 Angle Adjustment Setting

Specifications

Single Vane

| Size | Rotating angle adjustment range | Rubber bumper |
|------|---------------------------------|---------------|
| 10 | 0 to 230° | Yes |
| 15 | | |
| 20 | | |
| 30 | | |
| 40 | 0 to 230° | |

Note 1) Use rotary actuator for 270°.

Note 2) Connecting ports are side ported only.

Note 3) The allowable kinetic energy is the same as the specifications of the rotary actuator.

Double Vane

| Size | Rotating angle adjustment range | Rubber bumper |
|------|---------------------------------|---------------|
| 10 | 0 to 90° | Yes |
| 15 | | |
| 20 | | |
| 30 | | |
| 40 | | |

Note 1) Since the maximum angle of the rotating angle adjustment range will be limited by the rotation when using a rotary actuator for 90°, make sure to take this into consideration when ordering. Rotary actuator for 90° should be used to adjust the angle of 85° or less as a guide.

Note 2) Connecting ports are side ported only.

Note 3) The allowable kinetic energy is the same as the specifications of the rotary actuator.

Rotating Angle Adjustment Method

Remove the resin cap in the illustrations below, slide the stopper block on the long groove and lock it into the appropriate position to adjust the rotating angle and rotating position. Protruding four chamfers for wrench on the output shaft that rotates allows manual operation and convenient positioning. (Refer to the rotating angle setting examples shown in the next page for details.)

Note) For size 40, each stopper block comes with 2 holding screws.

Recommended Tightening Torque for Holding Stopper Block

| Size | Tightening torque (N·m) |
|------|-------------------------|
| 10 | 1.0 to 1.2 |
| 15 | |
| 20 | 2.5 to 2.9 |
| 30 | 3.4 to 3.9 |
| 40 | |

Note) Stopper block is tightened temporarily at the time of shipment. Angle is not adjusted before shipment.

Other Operating Method

Although one stopper block is mounted on each long groove for standard specifications as shown in the illustrations below, 2 stopper blocks can be mounted on one long groove.

| Angle adjustment range when 2 stopper blocks are mounted on one long groove | |
|---|-----|
| Size: 10, 40 | 50° |
| Size: 15, 20, 30 | 60° |

As shown in <Fig. b>, when mounting 2 stopper blocks on one long groove, by revolving each stopper block (A)(B), the rotation range of the output shaft with single flat (key) is adjustable, as described in <Fig. a>, within either left 50° or 60° against port A and B.

(Rotation range of single flat (key) when mounting 2 stopper blocks on the other side's groove is the opposite side from <Fig. a> and the setting range is within either right 50° or 60° against port A and B.)

* These figures show the CRB2 series.

Rotating Angle Setting Examples

Example 1 The stopper ring is mounted on the standard position.
(Rotary actuator with a rotating angle of 270° is used.)

<Fig. 1-1>

<Fig. 1-2>

Lock Block D in Fig. 1-2, and move Block C clockwise to allow the rotation of the shaft with single flat in Fig. 1-1 from point zero to End 1. When Block C is locked and Block D is moved counterclockwise, the shaft with single flat in Fig. 1-1 rotates from point zero to End 2. The maximum rotation range of the shaft with single flat is as follows: Sizes 10, 40: up to 230°; Sizes 15, 20, 30: up to 240° (Fig. 1-2 shows when the rotating angle is 0°.)

Example 2 The stopper ring is mounted on 120° counterclockwise from the standard position shown in Fig. 1-2 of Example 1.

<Fig. 2-1>

<Fig. 2-2>

The maximum rotation range of the shaft with single flat in Fig. 2-2 is 195°, from End 1 to End 2. The rotation range of the shaft with single flat in Fig. 2-1 decreases to the range between End 2 and 3 when moving Block C in Fig. 2-2 clockwise, and similarly when moving Block D counterclockwise, the rotation range decreases to the range between End 1 and 4. However, since the internal stopper will come into contact with the vane at End 1 position of the shaft with single flat in Fig. 2-1, make sure that the stopper lever stops at Block D when adjusting.

Example 3 The stopper ring is mounted on 120° clockwise from the standard position shown in Fig. 1-2 of Example 1 as in Fig. 4-2 of Example 4.

<Fig. 3-1>

<Fig. 3-2>

Lock Block C in Fig. 3-2 and move Block D counterclockwise to allow the rotation of the shaft with single flat in Fig. 3-1 from End 1 to End 2. However, since the internal stopper will come into contact with the vane at End 1 position of the shaft with single flat make sure that the stopper lever stops at Block C when adjusting. End 1 side can be adjusted within 30° by moving Block C counterclockwise.

Example 4 The stopper ring is mounted on 120° clockwise from the standard position shown in Fig. 1-2 of Example 1 as in Fig. 3-2 of Example 3.

<Fig. 4-1>

<Fig. 4-2>

The maximum rotation range of the shaft with single flat is 270°, from End 1 to End 2, when using the actuator for 270° and End 1 side in Fig. 4-1 is stopped using the internal stopper and End 2 side is adjusted using Block C. The rotation range can be adjusted within 90° in End 2 side. Note that Block C cannot be moved and set 90° or more counterclockwise from its position in Fig. 4-2 since the internal stopper will come into contact with the vane.

Note 1) Mounting of the stopper ring shown in Examples 2, 3, 4 are not applicable for size 10.

Note 2) ● marks in the illustrations above indicate the mounting position of the stopper ring.

Note 3) Select the appropriate rotation of the rotary actuator after careful consideration of the content of "Angle Adjustment Setting".

Note 4) For size 40, each block comes with 2 holding screws.

Note 5) These figures show the CRB2 series.

* Operating range: θm

The range between the position where the auto switch turns ON as the magnet inside the auto switch unit moves and the position where the switch turns OFF as the magnet travels the same direction.

* Hysteresis range: θd

The range between the position where the auto switch turns ON as the magnet inside the auto switch unit moves and the position where the auto switch turns OFF as the magnet travels the opposite direction.

Note) Since the figures in the above table are provided as a guideline only, they cannot be guaranteed.

Adjust the auto switch after confirming the operating conditions in the actual setting.

How to Change the Auto Switch Detecting Position

* When setting the detecting position, loosen the tightening screw a bit and move the auto switch to the preferred position and then tighten again and fix it. At this time, if tightened too much, screw can become damaged and unable to fix position. Be sure to set the tightening torque around 0.49 N·m.

Auto Switch Mounting

External view and descriptions of auto switch unit

This following shows the external view and typical descriptions of the auto switch unit.

Solid state auto switch

<Applicable auto switch>

3-wire type.....D-S99(V)□/S9P(V)□

2-wire type.....D-T99(V)□

1. Switch block detaching

Remove the cross recessed round head screw (1) to detach the switch block.

2. Solid state auto switch mounting

Secure the solid state auto switch with the cross recessed round head screw (1) and holding block (A).

Proper tightening torque: 0.4 to 0.6 (N·m)

* Since the holding block (A) moves inside the groove, move it to the mounting position beforehand.

· After the actuated position has been adjusted with the cross recessed round head screw (1), use the auto switch.

Reed auto switch

<Applicable auto switch>

D-97/93A (With indicator light)

D-90/90A (Without indicator light)

1. Preparations

Loosen the cross recessed round head screw (2) (About 2 to 3 turns).

* This screw has been secured temporarily at shipment.

2. Reed auto switch mounting

Insert the reed auto switch until it is in contact with the switch block hole.

* For the D-97/93A model, insert the auto switch in the direction shown in the Fig. on the right.

* Since the D-90/90A model is a round type, it has no directionality.

3. Reed auto switch securing

Tighten the cross recessed round head screw (2) to secure the reed auto switch.

Proper tightening torque: 0.4 to 0.6 (N·m)

· After the actuated position has been adjusted with the cross recessed round head screw (1), use the auto switch.

<Single vane>

Size: 10 to 40

* The above figure shows the CRB2 series.

- * Solid-lined curves indicate the rotation range of the output shaft with single flat (key). When the single flat (key) is pointing to the END ① direction, the switch for rotation END ① will operate, and when the single flat (key) is pointing to the END ② direction, the switch for rotation END ② will operate.
- * Broken-lined curves indicate the rotation range of the built-in magnet. Operating angle of the switch can be decreased by either moving the switch for rotation END ① clockwise or moving the switch for rotation END ② counterclockwise. Auto switch in the figures above is at the most sensitive position.
- * Each auto switch unit comes with one right-hand and one left-hand switch.

Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “**Caution**,” “**Warning**” or “**Danger**.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)*1, and other safety regulations.

 **Caution:** **Caution** indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.

 **Warning:** **Warning** indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.

 **Danger :** **Danger** indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

Warning

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalog information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

3. Do not service or attempt to remove product and machinery/equipment until safety is confirmed.

1. The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
2. When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.

4. Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.

1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalog.
3. An application which could have negative effects on people, property, or animals requiring special safety analysis.
4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.

If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.

Read and accept them before using the product.

Limited warranty and Disclaimer

1. The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.*2)
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalog for the particular products.

*2) Vacuum pads are excluded from this 1 year warranty.

A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

1. The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
2. The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.
