## Platform Cylinder

## CXT Series

## ø12, ø16, ø20, ø25, ø32, ø40

## A highly rigid and highly accurate slide table integrated with an actuator.

- Two types of guide rod bearings to accommodate your application

Slide bearing - For heavy loads
Ball bushing bearing - For highly accurate and smooth operation
 be mounted.

- A shock absorber can be installed (option).
- Can be mounted on two sides.

Adjusting bolt with bumper is standard.
Performs the function of a cushion and adjusts the stroke 5 mm on each side, or 10 mm for both sides.

For moving and transferring workpieces.

For moving the receptacle for workpieces used in stamping or press-fitting processes.

For using as a Pick \& Place unit in combination with other actuators.

\text { static mass } \\
(\mathrm{kg})\end{array}
$$\right]\)

Note 1) Table displacement

Note 2) Allowable static weight An "allowable static mass the allowable amount of static mass that can be applied vertically to
the workpiece mounting surface of the table
while the table is at the stroke end.

## Maximum Load Mass and Allowable Moment

| $\begin{aligned} & \text { Bore size } \\ & (\mathrm{mm}) \end{aligned}$ | Bearing | Maximum load mass Wmax (kg) | Allowable moment (N.m) |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  |  | M1 (= M3) | M2 |
| 12 | Slide bearing | 3 | 1.25 | 1.68 |
|  | Ball bushing bearing |  | 0.53 | 0.70 |
| 16 | Slide bearing | 7 | 3.34 | 4.25 |
|  | Ball bushing bearing |  | 1.53 | 2.11 |
| 20 | Slide bearing | 12 | 11.4 | 17.1 |
|  | Ball bushing bearing |  | 5.60 | 7.28 |
| 25 | Slide bearing | 20 | 11.4 | 19.3 |
|  | Ball bushing bearing |  | 5.60 | 8.19 |
| 32 | Slide bearing | 30 | 19.8 | 23.3 |
|  | Ball bushing bearing |  | 10.1 | 14.8 |
| 40 | Slide bearing | 50 | 37.3 | 46.2 |
|  | Ball bushing bearing |  | 21.3 | 27.5 |

Note) For the purpose of calculating the moment, the length of the arm is the distance that is measured from the guide shaft center (" $\bullet$ " mark). Dimension $L$ from the guide shaft center to the top surface of the table is indicated below.

| (mm) |  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| Bore size | 12 | 16 | 20 | 25 | 32 | 40 |
| L dimension | 19.5 | 24 | 28 | 31 | 39.5 | 47.5 |

## Allowable Load Only by Adjustment Bolt

If only the adjustment bolt is used for stopping the load, make sure that the load weight and the speed will be below the curve in the graph on the right, taking into consideration the durability of the rubber bumper that is attached to the end of the adjustment bolt and the vibration and noise that are created when stopping (provided that the maximum load weight is not exceeded).

In conditions in which the load weight and the speed will be above the curve, use a shock absorber (provided that the maximum load weight not exceeded).

## Caution

In the case of the ball bushing type, the service life could be drastically shortened if shocks or excessive moments are applied. Therefore, even if the conditions given above are not exceeded, the use of a shock absorber is recommended.

## Static Movable Mass when Stopped

When the CXT series cylinder is used for moving the workpiece receptacle, such as in a stamping or press-fitting process, a vertical load will be applied to the top surface of the stopped slide block (refer to the figure on the right). In this case, the allowable mass is greater than the maximum load weight, as given in the table on the right.

## $\triangle$ Caution

1. Make sure that the slide block is stopped at the stroke end.
2. Match the center of the mass to be applied with the center of the slide block. The direction of the mass must be vertically downward in relation to the surface on which the workpiece is mounted, as shown in the figure on the right.
3. Do not apply a load that involves shocks such as those caused by pounding (particularly with the ball bushing type).
4. If this mass is applied, the deflection of the guide shaft will also have a large value.

＊Since this is a guideline including hysteresis，not meant to be guaranteed． （Assuming approximately $\pm 30 \%$ dispersion）
There may be the case it will vary substantially depending on an ambient environment．
＊Auto switch mounting brackets BQ2－012 are not used for sizes over ø32 of
D－A9 $\square(\mathrm{V}) / \mathrm{M} 9 \square(\mathrm{~V}) / \mathrm{M} 9 \square \mathrm{~W}(\mathrm{~V}) / \mathrm{M} 9 \square \mathrm{~A}(\mathrm{~V})$ types．The above values indicate the operating range when mounted with the current auto switch installation groove．

CXT Series
Auto Switch Mounting 2
Auto Switch Mounting Bracket: Part No.

Note ) When shipping cylinders, auto switch mounting brackets and auto switches are shipped together.

1 * For solid state auto switches, auto switches with a pre-wired connector are also available. Refer to pages 1192 and 1193 for details.
I * Normally closed ( $\mathrm{NC}=\mathrm{b}$ contact) solid state auto switches ( $\mathrm{D}-\mathrm{M} 9 \square \mathrm{E}(\mathrm{V})$ ) are also available. For details, refer to page 1592-1.

* D-A7/A8/F7/J7 types cannot be mounted on $\varnothing 12$ to $ø 25$.
- If the cylinder is used in an application in which a magnetic material is placed in close contact around the cylinder as shown in the graph on the below (including cases in which even one of the sides is in close contact) the operation of auto switches could become unstable. Therefore, please check with SMC for this type of application.

Magnetic substance
(Iron plate, etc.)

Magnetic substance
(Iron plate, etc.)

## 1 Adjustable Stroke

The stroke adjustment range may be expanded with a long adjustment bolt.

## 2 Fluororubber Seal (Cylinder unit only)

Fluororubber is used only for the cylinder unit seal.

## How to Order

Specifications

| Seal material | Fluororubber (Cylinder unit only) |
| :---: | :--- |

* Specifications other than the above are the same as the standard type.

# Specific Product Precautions 

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages $\mathbf{3}$ to 12 for Actuator and Auto Switch Precautions.

## Operating Precautions

## $\triangle$ Caution

1. Make sure not to apply to the slide block a load that exceeds the value that has been calculated in the selection procedures.
2. Operate the cylinder securing it by its plates, not by securing it by its slide block.
3. The clearance between the slide block and the plate at the stroke end is approximately 1 mm to 6 mm . It could be extremely dangerous, as there is the risk of getting your fingers caught.
Install a cover as necessary.
4. At both stroke ends, adjust the damper portion at the end of the adjusting bolt so that it comes in contact with the slide block. (The clearance between the slide block and the plate must be 1 mm or more.)
If it is operated without making any contact, the piston rod of the actuating cylinder or the connecting hardware (adapter) could become damaged by an excessive impact, or the slide block could collide with the plate and create an abnormal noise.
5. The load weight or operating speed will be limited if only the adjusting bolt is used.
Refer to the section on "Allowable load when only the adjustment bolt is used" on page 711
6. Please contact SMC if this product will be used in an environment in which the piston rod and the guide shaft surfaces will be exposed to water (hot water), coolant, cutting chips, or dust.
7. The slide block bearings must be greased periodically. Inject grease (Class 1 or 2 lithium soap grease consistency) through the grease inlet.
Note) On those with a cylinder bore of $\varnothing 12$, apply grease to the guide shaft.
8. To operate the cylinder, use a non-lubricating air supply. Use turbine oil Class 1 (ISO VG32), if lubricated. (Using machine oil or spindle oil are not allowed.)

## Mounting

## © Caution

1. While a high level of flatness is desired for the surface on which the cylinder is to be mounted, if sufficient flatness cannot be attained, use shims to adjust the installation of the cylinder so that the slide block can operate throughout its stroke under the minimum operating pressure.
2. Do not scratch or gouge the piston rod of the actuating cylinder, as this could damage the rod seal and lead to air leaks.
The same applies to the guide shaft.
3. Make sure not to apply shocks or excessive moment to the slide block of the ball bushing type.
4. The port direction of the actuating cylinder can be changed in $90^{\circ}$ increments by removing the four bolts that secure the cylinder in place.
After changing the direction, verify the operation at the minimum operating pressure.
5. Before the installation, thoroughly flush out the piping to prevent dust or cutting chips from entering the cylinder.
6. The mounting position of the adjusting bolt and the shock absorber cannot be inverted due to the constraints imposed by the locating pin for the shock absorber that is provided on the slide block.
To invert the position, please contact SMC.

## Handling on Shock Absorber

## © Caution

1. The RB series (SMC made) shock absorbers can absorb a wide range of energy without requiring adjustment. (No adjustment screw is provided.)
2. The screw at the bottom is not for adjustment.

Never turn this screw as it could cause an oil leak (lowered performance).
3. Do not scratch the surface of the shock absorber rod because doing so could affect the shock absorber's durability or lead to poor retraction.

* For detailed specifications about the shock absorber, refer to Best Pneumatics No. 2-3.

## Service Life and Replacement Period of Shock Absorber

## $\triangle$ Caution

1.Allowable operating cycle under the specifications set in this catalog is shown below.
1.2 million cycles RB08 $\square \square$

2 million cycles RB10 $\square \square$ to RB2725
Note) Specified service life (suitable replacement period) is the value at room temperature ( 20 to $25^{\circ} \mathrm{C}$ ). The period may vary depending on the temperature and other conditions. In some cases the absorber may need to be replaced before the allowable operating cycle above.

[^0]:    *1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.
    Consult with SMC regarding water resistant types with the above model numbers.
    *2 1 m type lead wire is only applicable to D-A93.

    * Lead wire length symbols:

    $$
    \begin{array}{rll}
    .5 \mathrm{~m} & \ldots . . . . . . . . . ~ & \text { Nil }
    \end{array} \text { (Example) M9NW } 1 \text { (Example) M9NWM }
    $$

    * Solid state auto switches marked with " $\bigcirc$ " are produced upon receipt of order.
    * D-P3DWA $\square$ is compatible with ø25 to ø40.

[^1]:    * Since there are other applicable auto switches than listed, refer to page 720 for details.
    *For details about auto switches with pre-wired connector, refer to pages 1192 and 1193.

[^2]:    * For details, refer to the SMC website.

[^3]:    * Seal kit includes (32, (33) and (34). Order the seal kit with the kit number.
    * Since the seal kit does not include a grease pack, order it separately

    Grease pack part no.: GR-S-010 (10 g)

[^4]:    Note 1) (): Denotes the values of D-A93.
