3 Port Solenoid Valve

VP300/500/700 Series

Selectable power consumption!

0.4 w
[Low wattage specification]

0.55 w 1.55 w
[With power saving circuit] [Standard]

[Starting 1.55 W, Holding 0.55 W] = Current model: 2.0 W
With DC light

Power consumption is reduced by power saving circuit.

Power consumption is decreased by approx. 1/3 by reducing the wattage required to hold the valve in an energized state. (Effective energizing time is over 40 ms at 24 VDC.) Refer to electrical power waveform as shown below.

Electrical power waveform of energy saving type

Applied voltage

24 V
0 V
1.55 W
0.55 W
0 W

Standard
Energy saving
With power saving circuit

40 ms

Built-in full-wave rectifier (AC)

• Noise reduction
Noise is considerably reduced by changing it to DC mode with a full-wave rectifier.

• Reduced apparent power
Current 5.6 VA → 1.55 VA [Standard]

Built-in strainer in the pilot valve

Unexpected troubles due to foreign matter can be prevented.

Note) Be sure to mount an air filter on the inlet side.

<td>O</td>
</tr>
<tr>
<td>U</td>
<td>O</td>
</tr>
</tbody>
</table>

*Note: There is no **S** option for AC mode, since a rectifier prevents surge voltage generation.

- In the DIN terminal type, since a light is installed in the connector, DOZ, DOU, YOZ, YOU are not available.

#### Caution

When using the surge voltage suppressor type, residual voltage will remain. Refer to page 1300 for details.

**UL-compliant**

- LN and MN types are with 2 sockets.
- Refer to page 1294 when different length of lead wire for L/M-type plug connector is required.
- Refer to page 1295 for details on the DIN (EN175301-803) terminal.
- With the same specifications as the DC type, all lead wire entries for the 24 VAC type are CE marking compliant.
Low power consumption 1.5 W (DC)  
Possible to use as either a selector or divider valve  
Possible to change from N.C. to N.O.  
• Refer to page 1300 for changing the type of actuation.  
Possible to use in vacuum applications  
Up to –100 kPa

</tbody>
</table>

**Note:**  
* It is in common between 110 VAC and 115 VAC, and between 220 VAC and 230 VAC.  
* Allowable voltage fluctuation is –15% to +5% of the rated voltage for 115 VAC or 230 VAC.  
* Since voltage drops due to the internal circuit in S, Z, T types (with power saving circuit), the allowable voltage fluctuation should be within the following range.  
  - 24 VDC: –7% to +10%  
  - 12 VDC: –4% to +10%  
* Note) Refer to page 1306 for details.

How to Order Pilot Valve Assembly

**Caution**
When only the pilot valve assembly is replaced, it is not possible to change from V211 (Grommet or L/M-type) to V212 (DIN or Conduit type), or vice versa.

Valve model: **VP[ ][][ ][][ ][ ]-5GZ[ ]1-[ ][]**

* Select from the below in accordance with the valve used.

**Grommet or L/M-type**

V211 - Pilot valve assembly

**DIN or Conduit type**

DIN connector

(Refer to page 1295.)

**Pressure specification**

- Nil: Standard (0.7 MPa)
- K: High-pressure type (1.0 MPa)

**Coil specification**

- T: With power saving circuit (DC only)

**Caution**
For V212 (DIN or Conduit type), the coil specification and voltage (including light/surge voltage suppressor) cannot be changed by changing the pilot valve assembly.

**Caution**
Tightening torque of the pilot valve assembly mounting screw

M2.5: 0.32 N·m

**Light/surge voltage suppressor**

<table>
<thead>
<tr>
<th></th>
<th>DC</th>
<th>AC</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nil</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>S</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Z</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>R</td>
<td>−</td>
<td>−</td>
</tr>
<tr>
<td>U</td>
<td>−</td>
<td>−</td>
</tr>
</tbody>
</table>

Note) There is no S option for AC mode, since a rectifier prevents surge voltage generation. When T is selected, only Z type of light/surge voltage suppressor is available.

**Electrical entry**

- G: Grommet (Lead wire length 300 mm)
- H: Grommet (Lead wire length 600 mm)
- L: L-type plug connector
- LN: Without lead wire
- LO: Without connector
- M: M-type plug connector
- MN: With lead wire
- MO: Without lead wire

* LN and MN types are with 2 sockets.
* Refer to page 1294 when different length of lead wire for L/M-type plug connector is required.

**Rated voltage**

</table>

* It is in common between 110 VAC and 115 VAC, and between 220 VAC and 230 VAC.
* Allowable voltage fluctuation is −15% to +5% of the rated voltage for 115 VAC or 230 VAC.
* Since voltage drops due to the internal circuit in S, Z, T types (with power saving circuit), the allowable voltage fluctuation should be within the following range.

| 24 VDC | -7% to +10% |
| 12 VDC | -4% to +10% |

Note) Refer to page 1296 for details.

How to Order Pilot Valve Assembly

⚠️ Caution
When only the pilot valve assembly is replaced, it is not possible to change from V211 (Grommet or L/M-type) to V212 (DIN or Conduit type), or vice versa.

Valve model: VP□□□□ □□□□ -5GZ1□□
* Select from the below in accordance with the valve used.

Grommet or L/M-type

V 2 1 1 □□□□ -5GZ

DIN or Conduit type

V 2 1 2 □□□□ -5

Light/surge voltage suppressor

<table>
<thead>
<tr>
<th>Light/surge voltage suppressor</th>
<th>DC</th>
<th>AC</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nil</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>S</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>Z</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>R</td>
<td>○</td>
<td>○</td>
</tr>
<tr>
<td>U</td>
<td>○</td>
<td>○</td>
</tr>
</tbody>
</table>

Note) There is no S option for AC mode, since a rectifier prevents surge voltage generation. When T is selected, only Z type of light/surge voltage suppressor is available.

</tr>
</thead>
<tbody>
<tr>
<td>5</td>
<td>24 VDC</td>
</tr>
<tr>
<td>6</td>
<td>12 VDC</td>
</tr>
</tbody>
</table>

**Caution**

When using the surge voltage suppressor type, residual voltage will remain. Refer to page 1300 for details.

**Notes**
- LN and MN types are with 2 sockets.
- Refer to page 1294 when different length of lead wire for L/M-type plug connector is required.
- Refer to page 1295 for details on the DIN (EN175301-803) terminal.
- With the same specifications as the DC type, all lead wire entries for the 24 VAC type are CE marking compliant.
VP300/500/700 Series

Piping is concentrated on the base side. All external pilots are gathered in the base. Common external pilot port allows one piping. 2 types of exhaust ports Common or individual exhaust type are available. For individual exhaust type, exhaust can be restricted. Easy to change between N.C. and N.O.

Type of actuation can be easily changed from normally closed to normally open by changing the direction of a valve and end-plate only 180°.

• Refer to page 1300 for changing the type of actuation.

1 Pilot Exhaust Port with Piping Thread (M3) Specification

In this specification, piping to the pilot exhaust port (PE port) is available when the valve is used in an environment where the exhaust from the pilot valve is not allowable, or intrusion of ambient dust should be prevented.

How to Order Valve

\[ \text{VP}^3_5 \text{42} - \text{74} - 1 - \text{X500} \]

- Entry is the same as standard products.
- The specifications, performance and external dimensions are the same as those of standard models.

2 Body Ported Interchangeable Specification with the Previous Valve Mounting Hole Pitch Type

The mounting hole has been changed to the long type in order to provide interchangeability with the previous VP300/500 series.

How to Order Valve

\[ \text{VP}^3_5 \text{42} - \text{74} - 1 - \text{X505} \]

- Entry is the same as standard products.
- The specifications, performance and external dimensions are the same as those of standard models.

Note: VP742 is not available because the mounting hole pitch is the same as the previous type.

3 TRIAC Output Specification

For AC type valve, use this specification when the pilot valve is not recovered even though valve power supply is turned OFF at the equipment using output unit with large leakage voltage over 8% of the rated voltage (TRIAC output such as PLC or SSR, etc.). Combination with low wattage specification is not possible.

How to Order Valve

\[ \text{VP}^3_5 \text{42} - \text{74} - 1 - \text{X600} \]

- Entry is the same as standard products.

Note) Rated voltage: AC type only

Valve Precautions.

---

Manual Override

⚠️ Warning
Without an electric signal for the solenoid valve the manual override is used for switching the main valve. Connected actuator is started by manual operation. Use the manual override after confirming that there is no danger.

- **Non-locking push type**
  - Push down on the manual override button with a small screwdriver until it stops. Release the screwdriver and the manual override will return.

- **Push-turn locking slotted type**
  - Push the manual override button with a small flat head screwdriver until it stops. Turn it in the clockwise direction at 90° to lock the manual. Turn it counterclockwise to release it.

- **Push-turn locking lever type**
  - After pushing down, turn in the direction of the arrow. If it is not turned, it can be operated the same way as the non-locking type.

⚠️ Caution
When locking the manual override with the push-turn locking type (D or E type), be sure to push it down before turning. Turning without first pushing it down can cause damage to the manual override and other trouble such as air leakage, etc. Do not apply excessive torque when turning the locking type manual override. (0.1 N·m)

---

How to Use L/M-Type Plug Connector

⚠️ Caution
1. Attaching and detaching connectors
   - To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever’s pawl is pushed into the groove and locks.
   - To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

2. Crimping lead wires and sockets
   - Not necessary if ordering the lead wire pre-connected model. Strip 3.2 to 3.7 mm at the end of the lead wires, insert the ends of the core wires evenly into the sockets, and then crimp with a crimping tool. When this is done, take care that the coverings of the lead wires do not enter the core wire crimping area. (Please contact SMC for details on the crimping tool.)

3. Attaching and detaching sockets with lead wire
   - **Attaching**
     - Insert the sockets into the square holes of the connector (indication), and continue to push the sockets all the way in until they lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then, confirm that they are locked by pulling lightly on the lead wires.
   - **Detaching**
     - To detach a socket from a connector, pull out the lead wire while pressing the socket’s hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

(With connector and 2 pcs. of socket)

---

**How to Use DIN Terminal**

The DIN terminal type with an IP65 enclosure is protected against dust and water, however, it must not be used in water.

**Caution**

Connection

1) Loosen the set screw and pull the connector out of the solenoid valve terminal block.
2) After removing the set screw, insert a flat head screwdriver, etc. into the notch on the bottom of the terminal block and pry it open, separating the terminal block and the housing.
3) Loosen the terminal screws on the terminal block, insert the core of the lead wire into the terminal, and attach securely with the terminal screws.
4) Tighten the ground nut to secure the wire.

In addition, when using the DC mode type with a surge voltage suppressor (polar: S and Z types), connect wires corresponding to the polarity (+ or –) that is printed on the terminal block.

Changing the entry direction

After separating terminal block and housing, the cord entry direction can be changed by attaching the housing in the opposite direction.

* Make sure not to damage elements, etc., with the lead wires of the cord.

**Precautions**

Plug in and pull out the connector vertically without tilting to one side.

**Applicable cable**

Cable O.D.: ø4.5 to ø7
(Reference) 0.5 mm² to 1.5 mm², 2-core or 3-core, equivalent to JIS C 3306

**Applicable crimped terminal**

O terminal: R1.25-4M that is specified in JIS C 2805
Y terminal: 1.25-3L, which is released by JST Mfg. Co., Ltd.
Stick terminal: Size 1.5 or shorter
**VP Series**  
**Specific Product Precautions 3**

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

---

**DIN (EN175301-803) Terminal**

Y type DIN terminal corresponds to the DIN connector with terminal pitch 10 mm, which complies with EN175301-803B. Since the terminal pitch is different from the D type DIN connector, these two types are not interchangeable.

---

**How to Use Conduit Terminal**

**Caution**

- **Connection**
  1. Loosen the set screw and remove the terminal block cover from the terminal block.
  2. Loosen the terminal screws on the terminal block, insert the core of the lead wire or crimped terminal into the terminal, and attach securely with the terminal screws. In addition, when using the DC mode type with a surge voltage suppressor (polar: S and Z types), connect wires to terminal 1 and 2 corresponding to the polarity (+ or –) as shown on the right figure.
  3. Secure the cord by fastening the ground nut.

In the case of connecting wires, select cable types carefully because if those out of the specified range (ø4.5 to ø7) are used, it will not be able to satisfy IP65 (enclosure). Tighten the ground nut and set screw within the specified range of torque.

---

**How to Order DIN Connector**

- **Without indicator light**
  DC, AC, Other voltages: V200- -1

- **With indicator light**
  DC Polar type (Z): V200- -3-
  Non-polar type (U): V200- -5-

</tr>
</tbody>
</table>

**Rated voltage**

- 05 24 VDC
- 06 12 VDC

**Note** Order no. for 24 VAC specification is V200- -5- -B.

---

**Circuit with indicator light (Built-in connector)**

- **DC (U) circuit**
  - LED: Light emitting diode
  - R: Resistor

- **AC (Z) circuit**
  - NL: Neon bulb
  - R: Resistor
  - Note The 24 VAC specifications are the same as those in the DC (U) circuit diagram.

---

**Applicable cable**

Cable O.D.: ø4.5 to ø7
(Reference) 0.5 mm² to 1.5 mm², 2-core or 3-core, equivalent to JIS C 3306

**Applicable crimped terminal**

O terminal: Equivalent to R1.25-3 that is specified in JIS C 2805
Y terminal: Equivalent to 1.25-3, which is released by JST Mfg. Co., Ltd.
= Use O terminal when a ground terminal is used.
**VP Series**

**Specific Product Precautions 4**

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

---

**Light/Surge Voltage Suppressor**

### Caution

**<DC>**

- **Polar type**
  
  With surge voltage suppressor (□S)

  - [Diagram]

  - Grommet or L/M-type plug connector
    
    With light/surge voltage suppressor (□Z)

  - DIN or Conduit terminal
    
    With light/surge voltage suppressor (□Z)

- **Non-polar type**
  
  With surge voltage suppressor (□R)

  - [Diagram]

  - Grommet or L/M-type plug connector
    
    With light/surge voltage suppressor (□U)

- DIN or Conduit terminal
  
  With light/surge voltage suppressor (□U)

- Please connect correctly the lead wires to + (positive) and – (negative) indications on the connector. (For non-polar type, the lead wires can be connected to either one.)
- When the valve with polarity protection diode is used, the voltage will drop by approx. 1 V. Therefore, pay attention to the allowable voltage fluctuation. (For details, refer to the solenoid specification of each type of valve.)
- Solenoids, whose lead wires have been pre-wired: + (positive) side red and – (negative) side black.

### With power saving circuit

Power consumption is decreased by approx. 1/3 by reducing the wattage required to hold the valve in an energized state. (Effective energizing time is over 40 ms at 24 VDC.) Refer to the electrical power waveform as shown below.

**<Electrical power waveform of energy saving type>**

- Since the voltage will drop by approx. 0.5 V due to the transistor, pay attention to the allowable voltage fluctuation. (For details, refer to the solenoid specifications of each type of valve.)

**<AC>**

There is no S option, since a rectifier prevents surge voltage generation.

- Grommet or L/M-type plug connector
  
  With light/surge voltage suppressor (□Z)

- DIN or Conduit terminal
  
  With light/surge voltage suppressor (□Z)

- [Diagram]

- Note) LED for 24 VAC.
**Manual Override**

**Warning**

1. **Non-locking push type [Standard]**
   - Press in the direction of the arrow.

2. **Push-turn locking slotted type [D type]**
   - After pushing down, turn in the direction of the arrow. If it is not turned, it can be operated the same way as the non-locking push type.

**Caution**

When operating the D type, use a watchmakers’ screwdriver and turn lightly.
[Torque: Less than 0.1 N-m]

3. **Push-turn locking lever type [E type]**
   - After pushing down, turn in the direction of the arrow. If it is not turned, it can be operated the same way as the non-locking push type.

**Caution**

When locking the manual override with the push-turn locking type (D or E type), be sure to push it down before turning. Turning without first pushing it down can cause damage to the manual override and other trouble such as air leakage, etc.

---

**How to Use L/M-Type Plug Connector**

**Caution**

1. **Connector attachment/detachment**
   - To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever’s pawl is pushed into the groove and locks.
   - To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

2. **Crimping lead wire and socket connection**
   - Strip 3.2 to 3.7 mm at the end of the lead wires, insert the ends of the core wires evenly into the sockets, and then crimp with a crimping tool. When this is done, take care that the coverings of the lead wires do not enter the core wire crimping area. (Please contact SMC for the dedicated crimping tools.)

3. **Socket with lead wire attachment/detachment**
   - **Attachment**
     - Insert the sockets into the square holes of the connector (with \[\oplus, \ominus\] indication), and continue to push the sockets all the way in until they lock by hooking into the seats in the connector. (When they are pushed in, their hooks open and they are locked automatically.) Then, confirm that they are locked by pulling lightly on the lead wires.
   - **Detachment**
     - To detach a socket from a connector, pull out the lead wire while pressing the socket’s hook with a stick having a thin tip (approx. 1 mm). If the socket will be used again, first spread the hook outward.

---

**Solenoid Valve for 200/220 VAC Specification**

**Warning**

AC specification solenoid valves with grommet or L/M-type plug connector have a built-in rectifier circuit in the pilot section to operate the DC coil. With 200/220 VAC specification pilot valves, this built-in rectifier generates heat when energized. The surface may become hot depending on the energized condition; therefore, do not touch the solenoid valves.
Low Wattage Specification (VP300/500)
Specific Product Precautions

Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

---

**Plug Connector Lead Wire Length**

**Caution**
Plug connector lead wires have a standard length of 300 mm, however, the following lengths are also available.

**How to Order Connector Assembly**

- **DC**: SY100–30–4A
- 100 VAC: SY100–30–1A
- 200 VAC: SY100–30–2A
- Other AC voltages: SY100–30–3A
- Without lead wire: SY100–30–A
  (With a connector and 2 sockets)

**How to Order**
Specify the connector assembly part number together with the part number for the plug connector type solenoid valve without connector.
(Example) Lead wire length: 2000 mm

- **DC**
  - VP342Y-5LO1-01
  - VP342Y-1LO1-01
  - SY100-30-4A-20
- **AC**
  - VP342Y-1LO1-01
  - SY100-30-1A-20

<tbody>
<tr>
<td>Diode</td>
<td>24 V</td>
<td>12 V</td>
</tr>
<tr>
<td>Varistor</td>
<td>Approx. 47 V</td>
<td>Approx. 32 V</td>
</tr>
</tbody>
</table>
Caution

Connection
1. Loosen the holding screw and pull the connector out of the solenoid valve terminal block.
2. After removing the holding screw, insert a flat head screwdriver, etc. into the notch on the bottom of the terminal block and pry it open, separating the terminal block and the housing.
3. Loosen the terminal screws (slotted screws) on the terminal block, insert the cores of the lead wires into the terminals according to the connection method, and fasten them securely with the terminal screws.
4. Secure the cord by fastening the gland nut.

Precautions
Plug in and pull out the connector vertically without tilting to one side.

Compatible cable
Cord O.D.: ø3.5 to ø7
(Reference) 0.5mm², 2-core or 3-core, equivalent to JIS C 3306

Changing the entry direction
After separating the terminal block and housing, the cord entry can be changed by attaching the housing in the desired direction (4 directions at 90° intervals).

When equipped with a light, be careful not to damage the light with the cord’s lead wires.

Caution
When making connections, take note that using other than the supported size (ø3.5 to ø7) heavy duty cord will not satisfy IP65 (enclosure) standards. Also, be sure to tighten the gland nut and holding screw within their specified torque ranges.

Compatible cable
Cord O.D.: ø3.5 to ø7
(Reference) 0.5mm², 2-core or 3-core, equivalent to JIS C 3306

Type “Y”
DIN connector type Y is a DIN connector that confirms to the DIN pitch 8-mm standard.

- D type DIN connector with 9.4 mm pitch between terminals is not interchangeable.
- To distinguish from the D type DIN connector, “N” is listed at the end of voltage symbol. (For connector parts without lights, “N” is not indicated. Please refer to the name plate to distinguish.)
- Dimensions are completely the same as D type DIN connector.

Pilot Valve
The mounting of the low wattage type pilot valve is not interchangeable with that of the standard type. Additionally, be aware that the pilot valve cannot be replaced.
**Body Ported/Base Mounted Specification Specific Product Precautions 8**

Be sure to read this before handling the products. Refer to back page 50 for Safety Instructions and pages 3 to 9 for 3/4/5 Port Solenoid Valve Precautions.

---

**Light/Surge Voltage Suppressor**

**Caution**

Residual voltage of the surge voltage suppressor

Note) If a varistor or diode surge voltage suppressor is used, there is some residual voltage to the protection element and rated voltage. Therefore, refer to the table below and pay attention to the surge voltage protection on the controller side. Also, since the response time does change, refer to the specifications on pages 1265 and 1272.

**Type of Actuation Changing**

**Warning**

When changing the actuation or restarting the valve after the change, make sure that safety is fully assured and pay great attention.

Example: Changing from N.C. to N.O.

1) Base mounted

1. Remove the body from the sub-plate and reset the “▼” mark on the body corresponding to the “N.O.” mark on the sub-plate as shown in the figure above.

2. Remove the end plate from the body and rotate the end plate by 180° so that the “N.O.” mark on the end plate is at the top of the valve.

* It is not necessary to change the piping when this is done.

2) Body ported

1. Remove the end plate from the body and rotate the end plate by 180° to correspond the “N.O.” mark on the end plate to the top of the valve.

* Piping should be arranged as follows.

<table>
<thead>
<tr>
<th>Type of actuation</th>
<th>Port</th>
<th>1P</th>
<th>2A</th>
<th>3R</th>
</tr>
</thead>
<tbody>
<tr>
<td>N.C.</td>
<td>Inlet side</td>
<td>Outlet side</td>
<td>Exhaust side</td>
<td></td>
</tr>
<tr>
<td>N.O.</td>
<td>Exhaust side</td>
<td>Outlet side</td>
<td>Inlet side</td>
<td></td>
</tr>
</tbody>
</table>

**Precautions when replacing the old VP series with new VP series**

**Caution**

When replacing the built-in valve with the new VP series if the old VP series uses the external pilot manifold, be aware that the valve selection becomes different.

**Mounting valve**

<table>
<thead>
<tr>
<th>Manifold model no.</th>
<th>Mounting valve</th>
</tr>
</thead>
<tbody>
<tr>
<td>VP(A)300</td>
<td>New VP</td>
</tr>
<tr>
<td></td>
<td>Old VP</td>
</tr>
</tbody>
</table>

**Manifold data**

<table>
<thead>
<tr>
<th>VP(A)500</th>
<th>Internal pilot</th>
</tr>
</thead>
<tbody>
<tr>
<td>VP(A)700</td>
<td>Internal pilot</td>
</tr>
</tbody>
</table>

<How to distinguish the external pilot manifold>

When the piping is connected to the external pilot port, this manifold is the external pilot manifold.

**One-touch Fittings**

**Warning**

When fittings are used, they may interfere with one another depending on their types and sizes. Therefore, the dimensions of the fittings to be used should first be confirmed in their respective catalogs.

Fittings whose compliance with the VP series is already confirmed are stated below. If the fitting within the applicable range is selected, there will not be any interference.

**Applicable Fittings: KQ2H, KQ2S series**

<table>
