Controller for Electro-Pneumatic Regulator

**IC Series**

**Converting digital input signal into analog output signal**

10 bit parallel input signal (maximum)

Pressure can be set with $2^{10} = 1024$ steps.

- **Analog output**
  - 0–10 VDC
  - 4–20 mA DC

- **Digital input data**
  - 1024 steps

4 point preset output pressure

Applicable in the programming function with up to 20 steps.

- **Pressure**
  - 0–10 VDC
  - 4–20 mA DC

- **Output steps**
  - up to 20 steps

4 point pressure switch function

Switch output is enabled by setting the upper and lower limits of pressure.

- **Switch output**
  - Maximum
  - Minimum
  - OFF
  - ON

Power voltage and output signals

Output power voltage and output signal to the electro-pneumatic regulator can be set with keys on the front panel.

This product is mainly used in combination with ITV0000 series without a display function.
Controller for Electro-Pneumatic Regulator

**IC Series**

### How to Order

**Pressure range**

- 1: 0.1 MPa
- 3: 0.5 MPa
- 5: 0.9 MPa
- 9: –100 kPa

**Output specifications**

- 0: NPN open collector output
- 1: PNP open collector output

**Sensor**

- 0: Built-in sensor type
- 1: External sensor type

**Made to Order**

- N1: Standard type
  - Button operation is required for start-up when turning the power supply on again.
- X2: Automatic reset type
  - Automatically returns to the pre-shutdown state when power is switched on again.

**Protective cover (option)**

- B: With protective cover

**Mounting**

- A: Panel Mounting
  - Panel mount adapter
  - Panel
  - Gasket A
  - SW round head Phillips screws M3 x 8

### Option

When only optional parts are required, order using the part numbers listed below.

</tbody>
</table>

**Note 1** The display accuracy is the accuracy of the LED indication when the sensor port of the built-in sensor type is pressurized.

**Note 2** The external sensor type has the same output power supply voltage specifications.

**Note 3** The sensor for the external sensor type is not attached and must be ordered separately.

Any pressure sensor that transmits analog output signals can be connected.

Recommended sensor: PSE530 series (For more information, please refer to Best Pneumatics No. 8.)

Note 4 Button operation is required when turning the power on again. However, the made-to-order specification (-X2) automatically returns to the pre-shutdown state when power is switched on again.

Note 5 For the ITV1000 to 3000 series, a 10-bit input (parallel) through a sequencer is available for -X93, -X157 (CE-compliant).
Functions

- **4 point preset output**
  - Four points (CH1 to CH4) of pressure and switch output ranges can be set with the front panel keys.
  - Up to 20 steps of programming is possible.
  - Interval time (1 to 999 sec) can be set by programming.
  - The set pressures can be arranged in a random order.

- **10 bit parallel input**
  - Up to 10 bits of parallel input is possible from PLC.
  - Pressure can be set with \(2^{10} = 1024\) steps.

- **Pressure switch function (4 point)**
  Switch output is enabled by setting the upper and lower limits.

- **Power supply voltage and output signal switch function**
  - Output power supply voltage and output signal to the electro-pneumatic regulator can be selected with the front panel keys.
  - No need of power supply for the electro-pneumatic regulator.
  - Stable power supply is possible.

- **Set pressure correction function**
  (only for 4 point preset input)
  Either automatic or manual adjustment is possible in pressure adjustment mode.

  **<Automatic adjustment mode>**
  The controller automatically calculates the deviation and converts the correction value into the output signal. The deviation converges within the range of \(\pm0.5\%F.S\).
  Note) If the set pressure is 250 kPa and the output pressure on the pressure sensor is 245 kPa, the deviation is 250 – 245 = 5 kPa. In order to correct the deviation, the controller increases the output signal until the pressure on the pressure sensor converges at 250 kPa.

  **<Manual adjustment mode>**
  The deviation is corrected manually (with keys).

- **Zero span correction function**
  Deviation of the zero span point of the sensor can be corrected.

- **Keypad lock function**
  To prevent erroneous operation, operation on the key can be disabled.
  Keys which cannot be locked:

  - P-ON/STOP key
  - SET/RUN key

- **Reset function**
  The data is reset to the initial condition at the time of shipment.

- **Anti-chattering function**
  Large bore cylinders and ejectors consume a large volume of air in operation and occasionally experience temporary drops in supply pressure. This function prevents detection of such momentary supply pressure drops. It regards them as abnormalities and changes the response time settings. Possible response time settings: 5 ms, 20 ms, 160 ms, 640 ms

  **<Principle>**
  The controller equalizes the pressures measured during the specified response time. It then compares the equalized pressure and the set pressure to output switch signals accordingly.

- **Error display**

Descriptions

Internal Circuit and Connection

IC□□-0□□ (Internal sensor type)  IC□□-1□□ (External sensor type)

Sensor
Pressure port (M5 x 0.8 x 7)

Breathing port
(M3 x 0.5 x 9.5)

Descriptions

No.  Description
1  OUT display
Displays output specification to electro-pneumatic regulator.
2  RUN display
Displays control status.
3  CH channel (display) (for 4 point input)
Of CH1 to CH4 for pressure selection, channel with output ON lights up.
4  SW (switch) output display
Displays output type and output status of SW1 to 4.
5  UP button
Used to change mode and set value.
6  SET/RUN button
Used to confirm mode and set value, or to change to control ON state.
7  D-IN/READ button
Used to select mode and turn on or off power supply to electro-pneumatic regulator.
8  P-ON/STOP button
Used to turn on or off main power supply, escape from mode, or change to stand-by state.
9  DOWN button
Used to change mode and set value.
10 Pressure display
Displays measured value, settings, and error code.

No.  Description  Note
1  Power supply, 10 bit input cable
13 wire, O.D. 6.8 mm, 1 m length
2  Cable for 4 point switch output
5 wire, O.D. 6 mm, 1 m length
3  Pneumatic regulator connection cable
3 wire, O.D. 3.4 mm, 1 m length
4  Cable for external sensor

Note 1) Keep the bending radius of the cable greater than 50 mm.
Note 2) Since the electro-pneumatic regulator connection cable and the cable for external sensor are identical in shape, take precautions against erroneous connection.

For the setting procedure and detailed cable connection specifications, please refer to the operation manual.

IC□□-0□□ (NPN open collector output type)

Note 1) If the power supply for loads and main power supply are provided by a common source, the power supply (GND) can be used for SW-DC (GND).
Note 2) Connection to the pressure sensor is required only when using the external sensor type.

IC□□-1□□ (PNP open collector output type)

Note 1) Connection to the pressure sensor is required only when using the external sensor type.
### Dimensions

#### Internal sensor type

- **Panel fitting dimension:**
  - Width: 105.5 mm
  - Height: 70 mm

- **Protective cover:**
  - Width: 65 mm
  - Height: 48 mm

- **External sensor type:**
  - **Applicable panel thickness:** 0.5 to 4 mm
  - **Panel fitting dimension:**
    - Width: 100.5 mm
    - Height: 70 mm

#### Option

##### Panel mount adapter

- **Dimensions:**
  - Width: 47.4 mm
  - Height: 55 mm
  - Depth: 62 mm

##### Protective cover

- **Dimensions:**
  - Width: 50 mm
  - Height: 9.6 mm

### Panel fitting dimension

- **Applicable panel thickness:** 0.5 to 4 mm

Specific Product Precautions
Be sure to read this before handling the products.
Refer to back page 50 for Safety Instructions.

Controller for Electro-pneumatic Regulator

<table>
<thead>
<tr>
<th>Handling</th>
</tr>
</thead>
</table>

**Warning**
1. Do not drop, bump, or apply excessive impacts (980 m/s²) while handling. Although the body of the sensor may not be damaged, the inside of the sensor could be damaged and lead to a malfunction.
2. The tensile strength of the cord is 20 N. Applying a greater pulling force on it can cause a malfunction. When handling, hold the body of the sensor – do not dangle it from the cord.
3. Do not exceed the tightening torque of 3.5 N·m when installing piping. Exceeding this value may cause malfunctioning of the sensor.
4. The minimum bending radius of the cable is 50 mm.
5. Do not use pressure sensors with corrosive and/or inflammable gases or liquids.

<table>
<thead>
<tr>
<th>Connection</th>
</tr>
</thead>
</table>

**Warning**
1. This controller for electro-pneumatic regulator is not rated as explosion proof. Never use it in an atmosphere of corrosive or explosive gas.

**Caution**
1. Only the display unit of the controller for electro-pneumatic pressure regulator has an enclosure equivalent to IP65 rating.

**Operating Environment**

**Warning**
1. Incorrect wiring can damage the switch and cause a malfunction or erroneous switch output. Connections should be done while the power is turned off.
2. Do not attempt to insert or pull the pressure sensor or its connector when the power is on. Switch output may malfunction.
3. Wire separately from power lines and high voltage lines, avoiding wiring in the same conduit with these lines. Malfunctions may occur due to noise from these other lines.
4. If a commercial switching regulator is used, make sure that the F.G. terminal is grounded.

**Connection**

**Caution**
1. Mounting with panel mount adapter

Warning: Panel mount adapter
Sw round head
Phillips screws
M3 x 8

Gasket A

Display protective cover

Tighten screws by 1/4 to 1/2 turn after the heads are flush with the panel.
