Specifications

Model PF2W704 PF2W720 PF2W740 PF2W711

Measured fluid Water

Flow rate measurement range 0.35 to 4.5 L/min 1.7 to 17.0 L/min 3.5 to 45 L/min 7 to 110 L/min

Set flow rate range 0.35 to 4.5 L/min 1.7 to 17.0 L/min 3.5 to 45 L/min 7 to 110 L/min

Rated flow range 0.5 to 4 L/min 2 to 16 L/min 5 to 40 L/min 10 to 100 L/min

Minimum set unit 0.05 L/min 0.1 L/min 0.5 L/min 1 L/min

Accumulated pulse flow rate exchange value (Pulse width: 50 ms) 0.05 L/pulse 0.1 L/pulse 0.5 L/pulse 1 L/pulse

Operating fluid temperature 0 to 50 °C

Accuracy ±5% F.S. ±3% F.S.

Repeatability ±3% F.S. ±2% F.S.

Temperature characteristics (Note 1) ±5% F.S. (0 to 50 °C, 25 °C reference)

Current consumption (No load) 70 mA or less 80 mA or less

Weight (Note 2) 460 g 520 g 700 g 1150 g

Port size (Rc, NPT, G) 3/8 3/8, 1/2 1/2, 3/4 3/4, 1

Detection type Karman vortex

Indicator light 3-digit, 7-segment LED

Display units Instantaneous flow rate L/min, gal(US)/min

Accumulated flow L, gal(US)

Operating pressure range 0 to 1 MPa

Proof pressure 1.5 MPa

Accumulated flow range (Note 4) 0 to 999999 L

Ambient temperature range Operating: 0 to 50 °C, Stored: −25 to 85 °C (with no freezing and condensation)

Output specifications Switch output NPN open collector: Maximum load current: 80 mA; Internal voltage drop: 1 V or less (with load current of 80 mA); Maximum applied voltage: 30 V, 2 outputs PNP open collector: Maximum load current: 80 mA; Internal voltage drop: 1.5 V or less (with load current of 80 mA); 2 outputs

Accumulated pulse output NPN or PNP open collector (same as switch output)

Status LED’s Lights up when output is ON, OUT1: Green; OUT2: Red

Response time 1 sec. or less

Hysteresis Hysteresis mode: Variable (can be set from 0); Window comparator mode (Note 6): 3-digit fixed

Power supply voltage 12 to 24 VDC ±10%

Enclosure IP65

Operating temperature range 0 to 50 °C

Withstand voltage 1000 VAC for 1 minute between terminals and housing

Insulation resistance 50 MΩ or more (500 VDC measured via megohmmeter) between terminals and housing

Noise resistance 1000 Vp-p, Pulse width 1 μs, Rise time 1 ns

Note 1) In case of PF2W711, ±3% of F.S. or less (15 °C to 35 °C, 25 °C reference).

Note 2) Without lead wire.

Note 3) For digital flow switch with unit switching function. (Fixed SI unit [L/min or L] will be set for switch type without the unit switching function.)

Note 4) Accumulated flow rate is reset when the power supply turns OFF. Switch output and accumulated pulse output can be selected during initial setting.

Note 5) Without lead wire

Note 6) Window comparator mode — Since hysteresis will reach 3 digits, keep P_1 and P_2 or n_1 and n_2 apart by 7 digits or more.

In case of output OUT2, n_1, 2 to be n_3, 4 and P_1, 2 to be P_3, 4.

Note 7) This product conforms to the CE marking.

</table>

No. of inputs
- 4 inputs

Input protection
- Excess voltage protection

Switch output (Real-time switch output, accumulated switch output)
- NPN open collector (PF2W200)
- Maximum load current: 80 mA
- Internal voltage drop: 1 V or less (with load current of 80 mA)
- Maximum applied voltage: 30 V
- PNP open collector (PF2W201)
- Maximum load current: 80 mA
- Internal voltage drop: 1 V or less (with load current of 80 mA)

Accumulated pulse output
- NPN open collector or PNP open collector (same as switch output)

No. of outputs
- 4 outputs (1 output per 1 sensor input)

Output protection
- Short circuit protection

Hysteresis
- Hysteresis mode: Variable (can be set from 0), Window comparator mode: Fixed (3-digits)

Response time (Note 4)
- 1s or less

Accuracy (Note 4)
- ±5% F.S.

Repeatability (Note 4)
- ±5% F.S.

Temperature characteristics
- ±2% F.S. (0 to 30°C, 25°C reference)

Display method
- For measured value display: 4-digits, 7-segment LED
- For channel display: 1-digit, 7-segment LED

Status LED’s
- Illuminates when output is ON: OUT1: Red

Enclosure
- IP65 for the front face only, and IP40 for the remaining parts.

Operating temperature range
- Operating: 0 to 50°C
- Stored: −10 to 60°C (with no freezing and condensation)

Operating humidity range
- Operating or Stored: 35 to 85%RH (with no condensation)

Connection
- Power supply/Output connection: 8P connector
- Sensor connection: 4P connector

Material
- Housing: PBT, Monitor: PET, Backside rubber: CR

Weight
- 60 g (Except for any accessories that are shipped together)

Note 1) Fixed SI unit [L/min or L] will be set for switch types without the unit switching function. (*-M* is suffixed at the end of part number.) Accumulated flow is reset when the power supply turns OFF.

Note 2) Under the new Measurement Act, devices with unit switching functions cannot be used inside Japan.

Note 3) Fixed units: Instantaneous flow rate: L/min
Accumulated flow: L

Note 4) The system accuracy when combined with applicable flow sensor.

Note 5) This product conforms to the CE marking.

</tbody>
</table>

Note 1) ±5% F.S. (0 to 50°C, 25°C reference), ±3% F.S. (15 to 35°C, 25°C reference)

Note 2) Without lead wire.

Note 3) For digital flow switch with unit switching function. Fixed SI unit [L/min or L] will be set for switch type without the unit switching function.

Note 4) Accumulated flow rate is reset when the power supply turns OFF.

Note 5) Switch output and accumulated pulse output can be selected during initial setting.

Note 6) Window comparator mode — Since hysteresis will reach 3 digits, keep P_1 and P_2 or n_1 and n_2 apart by 7 digits or more.

(In case of output OUT2, n_1, 2 to be n_3, 4 and P_1, 2 to be P_3, 4.)

Note 7) The flow switch conforms to the CE marking.
# How to Order

Remote Type Sensor Unit: **PF2W5**

- **Flow rate range**: 04 [0.5 to 4 L/min], 20 [2 to 16 L/min], 40 [5 to 40 L/min]
- **Temperature range**: T [0 to 90°C]
- **Thread type**: Nil, Rc, N, NPT, G
- **Port size**: 03, 04, 06

**Option** (Only for output specifications “1”)
- Nil, C (e-con connector (1 pc.))
- N (lead wire with M12 connector (3 m))

**Lead wire** (Refer to page 322.)
- Nil, C (None)
- N (without lead wire)

**Note 1**: The system accuracy when combined with PF2W2.

**Note 2**: Output system can be selected during initial setting.

**Note 3**: Without lead wire. (Add 20g for the types of analog output whether voltage or current output selected.)

**Note 4**: The sensor unit conforms to the CE marking.

*Use this sensor by connecting it to a SMC remote type display unit, Series PF2W3□□□.*
**Description**

### Integrated Display Type

**PF2A703H, 706H, 712H**

1. **UP button** (▲ button)  
   Use to change the mode or to increase the set value.

2. **SET button** (▼ button)  
   Use this button to set the value or the set mode.

3. **DOWN button** (▼ button)  
   Use to change the mode or decrease the set value.

4. **RESET button** (▲ + ▼ button)  
   If the UP and DOWN buttons are pressed simultaneously, the RESET function will activate. In case of an emergency, please clear the display. The display of the accumulated flow will be reset to zero.

---

### Remote Type/Monitor Unit

**PF2A300, 301, 310, 311**

**PF2W300, 301, 330, 331**

1. **LED display/Red**  
   Displays the measured flow rate, each setting condition, and error code.

2. **Indicator (PF2A7□□, PF2A3□□ for air only)**  
   Illuminates when the normal condition (nor) is selected.

3. **Output (OUT1) display/Green**  
   Displays the output condition of OUT1. Lights up when output is turned ON.

4. **Output (OUT2) display/Red**  
   Displays the output condition of OUT2. Lights up when output is turned ON.

5. **UP button** (▲ button)  
   Use to change the mode or to increase the set value.

6. **SET button** (▼ button)  
   Use this button to set the value or the set mode.

7. **DOWN button** (▼ button)  
   Use to change the mode or decrease the set value.

---

**Integrated Display Type**

**PF2A710, 750, 711, 721, 751**

**PF2W704(T), 720(T), 740(T), 711**

**整齐 Display Type**

**PF2A703H, 706H, 712H**

**Remote Type/Monitor Unit**

**PF2A300, 301, 310, 311**

**PF2W300, 301, 330, 331**

**4-channel Flow Monitor (Remote type/Monitor unit)**

**PF2A200, 201**

**PF2W200, 201**

---

**4-channel Flow Monitor (Remote type/Monitor unit)**

**PF2A200, 201**

**PF2W200, 201**

---

**Series PF2A/PF2W**

For Air/Water

Digital Flow Switch
Flow rate measurement selection
Instantaneous flow rate and accumulated flow rate can be selected. A flow rate of up to 999999 can be accumulated. The accumulated flow rate is reset when the power supply turns OFF. (With PF2A7□□H, it is possible to select a holding function.)

Unit switching

For Air

<table>
<thead>
<tr>
<th>Display</th>

<td>gal (US)</td>
</tr>
</tbody>
</table>

Note: Fixed SI unit (L/min, or L, m³, m³ x 10³) will be set for the type without the display unit switching function.

Flow rate conversion
Normal condition: 0°C, 101.3 kPa, dry air
Standard condition: 20°C, 101.3 kPa, 65%RH (ANR) Switchable between these conditions.

Flow rate measuring unit confirmation
This function allows for the confirmation of the accumulated flow rate when instantaneous flow rate is selected and to confirm the instantaneous flow rate when accumulated flow rate is selected.

Keylock
This function prevents accidental operations such as changing the set value.

Accumulation clearance
This function clears the accumulated value.

Initialization of setting (only for Series PF2A7□□□H)
This function restores the setting to the original state, just as it had been shipped from the factory.

Output types
Real-time switch output, accumulated switch output, or accumulated pulse output can be selected as an output type.

Real-time switch output

Accumulated switch output

Accumulated pulse output

Note 1) For a digital flow switch with an unit switching function. (Fixed SI unit (L/min, or L, m³, or m³ x 10³) will be set for switch types without an unit switching function.) Refer to the specifications of the display unit for the flow rate value per pulse.
Functions

Copy function (PF2□200, 201 only)
Information to be copied is:
1. Flow rate range
2. Display mode
3. Display unit (Only available when the unit specification is nil.)
4. Output method
5. Output mode
6. Flow rate display unit (available with PF2A20□ only)
7. Flow rate value

Peak hold, Bottom hold display function (PF2□200, 201 only)
The maximum or minimum value can be held in the case where the instantaneous flow rate display mode is selected during the initial setting. The hold value is reset when the power supply turns OFF or the hold is released.

Error correction

<table>
<thead>
<tr>
<th>LED display</th>

</tr>
</tbody>
</table>

Note 1) Applicable to monitor integrated type and remote type except the PF2□□CA7 series.
Note 2) Applicable to the PF2□□□CA7 series only.

Channel select function (PF2□200, 201 only)
Every pushing the △ button, channel selection “1→2→3→4→1…” is available. The flow rate measurement of each selected channel is shown in the monitor unit.

Channel scan function (PF2□200, 201 only)
Changes displaying the channel shown every about 2 seconds and its detected flow rate.

For PF2A/W200, 201

<table>

Related Product
Multi Counter
Series CEU5

How to Order

CEU5

Output transistor mode
- Nill: NPN open collector output
- P: PNP open collector output

Power supply voltage
- Nill: 100 to 240 VAC
- D: 24 VDC

External output
- Nill: RS-232C
- B: RS-232C + BCD

Connection Method

Connection with the Digital Flow Switch (Series PF2)

- Possible to measure accumulated pulse output of a Digital Flow Switch by an unit of 100 L (litter) and 10 ft³ (cube foot) using the pre-scaling function* of the multi counter (When inputting to the multi counter, Up or Down is selected as input method.)
- Possible to take advantage of all CEU5 functions using preset mode and function mode.

* The set value is calculated by selecting manual mode. By multiplication by 4, then, per pulse value is set.

<Connection with other manufacturers’ encoders>
- Possible to switch multi counter side input method to 2-phase or Up/Down.
- Possible to connect to an encoder if the output method is Open Collector.
- When selecting UP or DOWN, phase A to COM input is counted toward addition direction, phase B to COM input is counted toward subtraction direction.

Caution
When connecting the CEU5 with an encoder from another manufacturer, please thoroughly confirm the specification beforehand. Please note that the CEU5 may not count normally depending on the output method, output frequency and connecting cable length, etc. of the encoders.

Regarding connection with scale cylinder, refer to “Stroke Reading Cylinder and Counter Series CE” in the Best Pneumatics No. 3.
**Series PF2A/PF2W Specific Product Precautions 1**

Be sure to read before handling. Refer to back page 1 for Safety Instructions and “Handling Precautions for SMC Products” (M-E03-3) for Flow Switch Precautions.

### Design and Selection

**Warning**

1. Operate the switch only within the specified voltage.
   Use of the switch outside of the specified voltage range can cause not only a malfunction and damage to the switch, but it can also cause electrical shock and fire.

2. Do not exceed the maximum allowable load specification.
   A load exceeding the maximum load specification can cause damage to the switch.

3. Do not use a load that generates a surge voltage.
   Although the circuit at the output side of the switch is surge-protected, damage may still occur if a voltage surge is applied repeatedly. When a load which generates a surge, such as from a relay or solenoid valve, is directly driven, use a switch with a built-in surge absorbing element.

4. Since the type of fluid varies depending on the product, be sure to verify the specifications.
   The switches do not have an explosion proof rating. To prevent a possible fire hazard, do not use with inflammable gases or fluids.

5. Monitor the internal voltage drop of the switch.
   When operating below the specified voltage, it is possible that the load may be ineffective even though the pressure switch function is normal. Therefore, the formula below should be satisfied after confirming the minimum operating voltage of the load.

   \[
   \text{Supply voltage} \geq \text{Internal voltage drop of switch} + \text{Minimum operating voltage of load}
   \]

   ![Supply Voltage Internal Voltage Drop Minimum Operating Voltage Load Table](image)

   For air

6. Use the switch within the specified flow rate measurement and operating pressure.
   Operating beyond the specified flow rate and operating pressure can damage the switch.

   For water

7. Use the switch within the specified flow rate measurement and operating pressure.
   Operating beyond the specified flow rate and operating pressure can damage the switch. Especially avoid the application of pressure through a water hammer, which is above the specification.

   <Examples of pressure reduction measures>
   a) Use a device such as a water hammer relief valve to slow the valve’s closing speed.
   b) Absorb impact pressure by using an accumulator or elastic piping material such as a rubber hose.
   c) Keep the piping length as short as possible.

8. Design the system, so that the fluid always fills the detection passage.
   Especially for vertical mounting, introduce the fluid from the bottom to the top.

9. Operate within the flow rate measurement range.
   If operated outside of the flow rate measurement range, the Karman vortex will not be generated and normal measurement will not be possible.

10. Sudden increase in flow rate may destroy the flow sensor. Ensure to open/close the flow control valve not to exceed the maximum flow rate measurement values.

### Caution

1. Data from the flow switch is stored even after the power supply is turned off.
   The input data is stored in EEPROM so that the data will not be lost after the flow switch is turned off. (The data can be rewritten for up to one million times, and stored for up to 20 years.)

2. Accumulated flow rate is reset when it is turned OFF.
   However, only in the case of the PF2A7□□□H series (for air) it is possible to select a holding function that maintains the accumulated flow rate, even though the power supply is off.

### Mounting

**Warning**

1. Mount the switch using the proper tightening torque.
   When the switch is tightened beyond the specified tightening torque, it may be damaged. On the other hand, tightening below the specified tightening torque may cause the installation screws to loosen during operation.

<table>
<thead>
<tr>
<th>Thread</th>
<th>Tightening torque Nm</th>
</tr>
</thead>
<tbody>
<tr>
<td>Rc 1/4</td>
<td>7 to 9</td>
</tr>
<tr>
<td>Rc 1/2</td>
<td>12 to 14</td>
</tr>
<tr>
<td>Rc 3/8</td>
<td>22 to 24</td>
</tr>
<tr>
<td>Rc 1/2</td>
<td>28 to 30</td>
</tr>
</tbody>
</table>

2. Apply a wrench only to the metal part of the piping when installing the flow switch onto the system piping.
   Do not apply the wrench to any part other than the piping attachment or the switch may be damaged.

3. Monitor the flow direction of the fluid.
   Install and connect piping so that fluid flows in the direction of the arrow indicated on the body.

4. Remove dirt and dust from inside of the piping by means of air blow, before attaching to the switch.

5. Do not drop or bump.
   Do not drop, bump, or apply excessive impacts (490 m/s²) while handling. Although the external body of the switch (switch case) may not be damaged, the switch inside could be damaged and cause a malfunction.

6. Hold the body of the switch when handling.
   The tensile strength of the cord is 49N and applying a greater pulling force than this can cause a malfunction. When handling, hold the body of the switch.

7. Do not use until you can verify that equipment can operate properly.
   Following mounting, repair, or retrofit, verify correct mounting by conducting suitable function and leakage tests after piping and power connections have been made.

8. Avoid the mounting orientation with the bottom of the body facing up.
   The switch can be mounted in any way such as vertically or horizontally, however, avoid the mounting orientation with the bracket on the bottom of the body facing upward.
**Warning**

For air

9. Never mount a switch in a place that will be used as a step stool during piping.

Damage may occur if an excessive load is applied to the switch.

10. Be sure to allow straight pipe length that is minimum 8 times the port size upstream and downstream of the switch piping.

When abruptly reducing the size of piping or when there is a restriction such as a valve on the upstream side, the pressure distribution in the piping changes and makes accurate measurement impossible. Therefore, flow restriction measures such as these should be implemented on the downstream side of the switch.

For water

11. Never mount a switch in a place that will be used as a step stool during piping.

Damage may occur if an excessive load is applied to the switch. Especially when the switch supports the piping, do not apply a load of 15N-m or more to the metal part of the switch.

12. Be sure to allow straight pipe length that is minimum 8 times the port size upstream and downstream of the switch piping.

When abruptly reducing the size of piping or when there is a restriction such as a valve on the upstream side, the flow velocity distribution in the piping changes and makes accurate measurement impossible. Therefore, flow restriction measures such as these should be implemented on the downstream side of the switch.

Also, leaving the downstream side open or bringing about excessive flow volume will increase the risk of cavitation and may make accurate measurement impossible. Increasing the fluid pressure is one means of reducing cavitation. Try a procedure such as mounting a throttle on the downstream side of the switch. Check to make sure there is no malfunction before using.

**Warning**

1. Verify the color and the terminal number when wiring.

Incorrect wiring can cause the switch to be damaged and malfunction. Verify the color and the terminal number in the operation manual when wiring.

2. Avoid repeatedly bending or stretching of the lead wire.

Repeatedly applying bending stress or stretching force to the lead wire will cause it to break.

3. Confirm proper insulation of wiring.

Make sure that there is no faulty wiring insulation (contact with other circuits, ground fault, improper insulation between terminals, etc.). Damage may occur due to excess current flow into a switch.

4. Do not wire in conjunction with power lines or high voltage lines.

Wire separately from power lines and high voltage lines, and avoiding wiring in the same conduit with these lines. Control circuits including switches may malfunction due to noise from these lines.

5. Do not allow a load to short circuit.

Although a switch indicates excess current error if a load is short circuited, all incorrect wiring connections such as power supply polarity cannot be protected. Take precautions to avoid incorrect wiring.

**Warning**

1. When using a switch for high temperature fluid, the switch itself also becomes hot due to the high temperature fluid. Avoid touching the switch directly as this may cause a burn.

**Warning**

1. Never use in the presence of explosive gases. The switches do not have an explosion proof rating. Never use in the presence of an explosive gas as this may cause a serious explosion.

2. Mount the switch in a locations where there is no vibration greater than 98 m/s² or impact greater than 490 m/s².

3. Do not use in an area where surges are generated.

When there are units that generate a large amount of surge in the area around a pressure switch, (e.g., solenoid type lifters, high frequency induction furnaces, motors, etc.) this may cause deterioration or damage to the switch's internal circuitry. Avoid sources of surge generation and crossed lines.

4. Switches are not equipped with surge protection against lightning.

The flow switches are CE compliant, however they are not equipped with surge protection against lightning. Lightning surge protection measures should be applied directly to the system components as necessary.

5. Avoid using the switch in an environment where the likelihood of splashing or spraying of liquids exists.

The switches are dustproof and splashproof, however avoid using in an environment where the likelihood of heavy splashing or spraying of liquids exists. Since the monitor unit of the remote type switches featured here is not dust or splashproof, the use in an environment where liquid splashing or spraying exists must be avoided.

6. Use the switch within the specified fluid and ambient temperature range.

The fluid and ambient temperature range is 0° to 50°C. Take measures to prevent the fluid from freezing when it is below 0°C, since this may damage the switch and lead to a malfunction. The installation of an air dryer is recommended for eliminating condensation and moisture. Never use the switch in an environment where there are drastic temperature changes even when these temperatures are within the specification.

7. Use the switch within the specified fluid and ambient temperature range. The fluid and ambient temperatures range for the switch is 0 to 50°C (and 0 to 90°C for high temperature fluid). Take measures to prevent the fluid from freezing when it is below 5°C, since this may cause damage to the switch and lead to a malfunction. Never use the switch in an environment where there are drastic temperature changes even when these temperatures fall within the specified temperature range.
1. Check regulators and flow adjustment valves before introducing the fluid. If pressure or flow rate beyond the specified range are applied to the switch, the sensor unit may be damaged.

2. The fluids that the switch can measure accurately are nitrogen and dry air. Please note that accuracy cannot be guaranteed when other fluids are used.

3. Never use inflammable fluids.

4. Install a filter or mist separator on the upstream side when there is a possibility of condensate and foreign matter being mixed in with the fluid. The rectifying device built into the switch will be clogged up and accurate measurement will no longer be possible.

5. The fluid that the switch can measure accurately is water. Also, combination of equal parts water/ethylene glycol (50/50%) can be used if its temperature is high. Please note that accuracy cannot be guaranteed when other fluids are used.

6. Never use inflammable fluids.

7. Install a filter on the inlet side when there is a possibility of condensation and foreign matter being mixed with the fluid. If foreign matter adheres to the switch's vortex generator or vortex detector, accurate measurement will no longer be possible.

1. After the power is turned on, the switch's output remains off while a message is displayed. Therefore, start the measurement after a value is displayed.

2. Perform settings after stopping control systems. When the switch's initial setting and flow rate setting are performed, output maintains the condition prior to the settings.

3. Do not apply excessive rotational force to the monitor unit. The integrated type display unit can rotate 360°. Rotation is controlled by the stopper; however, the stopper may be damaged if the monitor unit is turned with excessive force.

4. Be certain to turn on the power supply when the flow rate is at zero. Allow an interval of 10 minutes after turning on the power, as there are some changes in the display.

5. Flow rate unit

The switch measures at mass flow rates without being influenced by temperature and pressure. The switches use L/min as the flow rate indicator unit, in which the volumetric flow is substituted for mass flow at 0°C and 101.3 kPa (nor). The volumetric flow rate at 20°C, 101.3 kPa, and 65% RH (ANR) can be displayed with the high flow rate type switches for air.

Contact SMC regarding the specifications for clean environment.

**Warning**

1. Perform periodical inspections to ensure proper operation of the switch. Unexpected malfunctions may cause a possible danger.

2. Take precautions when using the switch for an interlock circuit. When a pressure switch is used for the interlock circuit, devise a multiple interlock system to prevent trouble or malfunction, and verify the operation of the switch and interlock function on a regular basis.

3. Do not disassemble or perform any conversion work on flow switches.

**Warning**

1. Check regulators and flow adjustment valves before introducing the fluid. If pressure or flow rate beyond the specified range are applied to the switch, the sensor unit may be damaged.

2. The fluids that the switch can measure accurately are nitrogen and dry air. Please note that accuracy cannot be guaranteed when other fluids are used.

3. Never use inflammable fluids.

4. Install a filter or mist separator on the upstream side when there is a possibility of condensate and foreign matter being mixed in with the fluid. The rectifying device built into the switch will be clogged up and accurate measurement will no longer be possible.

5. The fluid that the switch can measure accurately is water. Also, combination of equal parts water/ethylene glycol (50/50%) can be used if its temperature is high. Please note that accuracy cannot be guaranteed when other fluids are used.

**Detection principle of digital flow switch for air**

A heated thermistor is installed in the passage, and fluid absorbs heat from the thermistor as it is introduced to the passage. The thermistor's resistance value increases as it loses heat. Since the resistance value increase ratio has a uniform relationship to the flow velocity, the flow velocity can be detected by measuring the resistance value. To further compensate the fluid and ambient temperature, the temperature sensor is also built into the switch to allow stable measurement within the operating temperature range.

**Detection principle of digital flow switch for water**

When an elongated object (vortex generator) is placed in the flow, reciprocal vortexes are generated on the downstream side. These vortexes are stable under certain conditions, and their frequency is proportional to the flow velocity, resulting the following formula. 

\[ f = k \times v \]

\( f \): Frequency of vortex  \( v \): Flow velocity  \( k \): Proportional constant (determined by the vortex generator's dimensions and shape). Therefore, the flow rate can be measured by detecting this frequency.
Set Flow Rate Range and Rated Flow Range

⚠️ Caution

Set the flow rate within the rated flow range.
The set flow rate range is the range of flow rate that can be set on the controller.
The rated flow range is the range that satisfies the sensor's specifications (accuracy, linearity etc.).
It is possible to set a value outside of the rated flow range, however, the specification is not be guaranteed.

Specific Product Precautions 4

Be sure to read before handling. Refer to back page 1 for Safety Instructions and “Handling Precautions for SMC Products” (M-E03-3) for Flow Switch Precautions.
### 4-channel Flow Monitor

#### Handling

**Warning**

1. Do not drop, bump, or apply excessive impacts (980 m/s²) while handling. Although the body of the flow monitor case may not be damaged, the inside of the flow monitor could be damaged and lead to a malfunction.

2. The tensile strength of the power supply/output connection cable is 50N and the sensor lead wire with a connector is 25N. Applying a greater pulling force than the applicable specified tensile strength to either of these components can lead to a malfunction. When handling, hold the body of the controller.

#### Connection

**Warning**

1. Incorrect wiring can damage the switch and cause a malfunction or erroneous switch output. Connections should be done while the power is turned off.

2. Do not attempt to insert or pull the flow rate sensor or its connector when the power is on. Switch output may malfunction.

3. Wire separately from power lines and high voltage lines, avoiding wiring in the same conduit with these lines. Malfunctions may occur due to noise from these other lines.

4. If a commercial switching power supply is used, make sure that the F.G. terminal is grounded.

#### Operating Environment

**Warning**

1. Our 4-channel flow monitor is CE marked, however, it is not equipped with surge protection against lightning. Lightning surge countermeasures should be applied directly to system components as necessary.

2. Our 4-channel flow monitor does not have an explosion proof rating.

3. Enclosure "IP65" applies only to the front face of the panel when mounting. Do not use in an environment where oil splashing or spraying are anticipated.

#### Mounting

**Warning**

The front face of the panel mount conforms to IP65, however there is a possibility of liquid infiltration if the panel mount adapter is not installed securely and properly. Securely fix the adapter with screws as shown below.

#### Wiring

**Caution**

1. Connecting sensor cable and connector (ZS-28-CA-□)
   - Cut the sensor cable as shown below.
   - Insert each lead wire into the corresponding connector number by following the chart provided below.

<table>
<thead>
<tr>
<th>Connector no.</th>
<th>Cable wire color</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Brown (DC+)</td>
</tr>
<tr>
<td>2</td>
<td>Not used</td>
</tr>
<tr>
<td>3</td>
<td>Blue (DC−)</td>
</tr>
<tr>
<td>4</td>
<td>White (IN: 1 to 5 V)</td>
</tr>
</tbody>
</table>

   - Make sure that the numbers on the connector and the wire colors match. After verifying that the wires are fully inserted, temporarily hold A down by hand.
   - Using pliers, press the center of A straight down.
   - Note that that connector cannot be taken apart for reuse once it is crimped. Use a new sensor connector if wiring or cable insertion is done incorrectly.

2. Inserting/Detaching of sensor connector, power supply/output connector
   - Insert each connector straightforwardly until it clicks and locks onto the body.
   - To remove the connector, pull it straight out while pushing the lever with your thumb.
