

5 Port Solenoid Valve

Series VQ4000

Metal Seal

Rubber Seal

Space-saving profile

Clean space-saving design with all pilot valves concentrated to one side with no protrusions in any direction

Space-saving — 40% less

Capacity-saving — 50% less

(In-house comparison)

Compact with large flow capacity

(Ideal for driving cylinders up to $\phi 140$)

Built-in One-touch fittings for easier piping

Outstanding response times and long service life

(Metal seal with indicator light/surge suppressor)	
VQ4100 17 mS (Single)	100 million cycles * According to SMC life test conditions
VQ4200 12 mS (Double)	
Accuracy ± 3 mS	

A variety of common wiring methods are standardized.

<Plug-in type>

F kit (D-sub connector) P.1072 	T kit (Terminal block box) P.1076
L kit (Lead wire) P.1080 	S kit (Serial transmission) P.1089

Enclosure IP65 compliant Dusttight/Low jetproof type

Cylinder Speed Chart

Use as a guide for selection.
Please confirm the actual conditions with SMC Sizing Program.

* It is when the cylinder is extending that is meter-out controlled by speed controller which is directly connected with cylinder, and its needle valve with being fully open.

* The average velocity of the cylinder is what the stroke is divided by the total stroke time.

* Load factor: $((\text{Load weight} \times 9.8) / \text{Theoretical force}) \times 100\%$

Note 1) Value for valve on sub-plate and cylinder port Rc 3/8

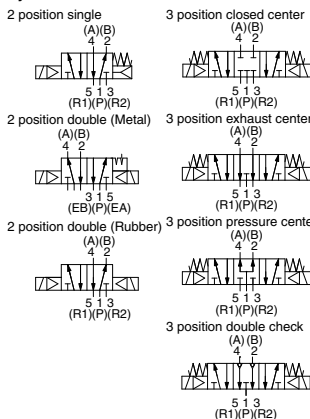

Note 2) Based on JIS B 8375-1981 Supply pressure: 0.5 MPa, with indicator light and surge voltage suppressor, clean air. This will change depending on pressure and air quality.) The value when ON for the double type.

Note 3) Values inside () indicate the weight of plug lead units.

Table: Without sub-plate, With sub-plate: Add 0.41 kg for plug-in type, 0.30 kg for plug lead type.

Symbol

Standard Specifications

Valve specifications	Valve construction		Metal seal	Rubber seal
	Fluid		Air/Inert gas	Air/Inert gas
	Maximum operating pressure ⁽³⁾		1.0 MPa (0.7 MPa)	
	Min. operating pressure	Single	0.15 MPa	0.20 MPa
		Double	0.15 MPa	0.15 MPa
		3 position	0.15 MPa	0.20 MPa
	Ambient and fluid temperature		-10 to 50°C ⁽¹⁾	-5 to 50°C ⁽¹⁾
	Lubrication		Not required	
	Manual override		Push type/Locking type (Tool required) Option	
	Impact/Vibration resistance		150/30 m/s ²	
Solenoid specifications	Enclosure		Dust tight (IP65 compatible)	
	Coil rated voltage		12, 24 VDC, 100, 110, 200, 220 VAC (50/60 Hz)	
	Allowable voltage fluctuation		±10% of rated voltage	
	Coil insulation type		Class B or equivalent	
	Power consumption (Current)	24 VDC	1 W DC (42 mA), 0.5 W DC (21 mA)	
		12 VDC	1 W DC (83 mA), 0.5 W DC (42 mA)	
		100 VAC	Inrush 1.2 VA (12 mA), Holding 1.2 VA (12 mA)	
		110 VAC	Inrush 1.3 VA (11.7 mA), Holding 1.3 VA (11.7 mA)	
		200 VAC	Inrush 2.4 VA (12 mA), Holding 2.4 VA (12 mA)	
		220 VAC	Inrush 2.6 VA (11.7 mA), Holding 2.6 VA (11.7 mA)	

Note 1) Use dry air to prevent condensation when operating at low temperatures.

Note 2) Impact resistance: No malfunction occurred when it is tested with a drop tester in the axial direction and at the right angles to the main valve and armature in both energized and de-energized states every once for each condition. (Values at the initial period)

Vibration resistance: No malfunction occurred in a one-sweep test between 45 and 2000 Hz. Test was performed at both energized and de-energized states in the axial direction and at the right angles to the main valve and armature. (Values at the initial period)

Note 3) Values inside () denote the low wattage (0.5 W) specifications.

Note 1) Release valve spacer and double check spacer for residual pressure exhaust cannot be combined with external pilot.

Note 2) Can be mounted on L kit only. For other kits, order E type control unit.

(Refer to pages 1098 to 1101.)

Series VQ4000

F Kit (D-sub connector kit)

- Simplification and labor savings for wiring work can be achieved by using a D-sub connector for the electrical connection.
- Using connector for flat ribbon cable (25P) conforming to MIL standard permits the use of connectors put on the market and gives a wide interchangeability.
- Connector entry can be selected on either the U side or the D side according to the mounting orientation.
- Maximum stations are 18.

Manifold Specifications

- Note 1) When two or more symbols are specified, indicate them alphabetically.
Example) -CDK
- Note 2) Combination of [C] and [S] is not possible.
- Note 3) Specify the wiring specifications on the manifold specification sheet.
- Note 4) Refer to pages 1098 to 1101 for with control unit.

Note) As a semi-standard specification, the maximum number of stations can be increased by special wiring specifications.
For details, refer to page 1073.

● Electrical wiring specifications

Stations are counted starting from the first station on the D side.

D-sub connector

Double wiring (connected to SOL. A and SOL. B) is adopted for the internal wiring of each station, regardless of valve and option types. Mixed single and double wiring is available as a semi-standard specification. For details, refer to below.

Note) There is no polarity.
It can also be used as a negative common.

Standard wiring

Special Wiring Specifications

Double wiring (connected to SOL. A and SOL. B) is used for the internal wiring of each station regardless of valve and option types. Mixed single and double wiring is available as a semi-standard specification.

1. How to order

Indicate option symbol "K" in the manifold part number and be sure to specify station positions for single or double wiring on the manifold specification sheet.

2. Wiring specifications

Connections begin with the A side solenoid to terminal no. 1, and continue in the order indicated by the arrows in the drawing without skipping any terminals. Maximum stations are 18.

Note 1) Applicable to DC specifications. Please select when you expect to energize the unit for extended periods of time. Refer to page 3 for details.
Note 2) Refer to page 1079 for external pilot specification. Combination of external pilot and perfect interface is not possible.
Note 3) When two or more symbols are specified, indicate them alphabetically.

How to Order Manifold Assembly

Specify the part numbers for valves and options together beneath the manifold base part number.

<Example>

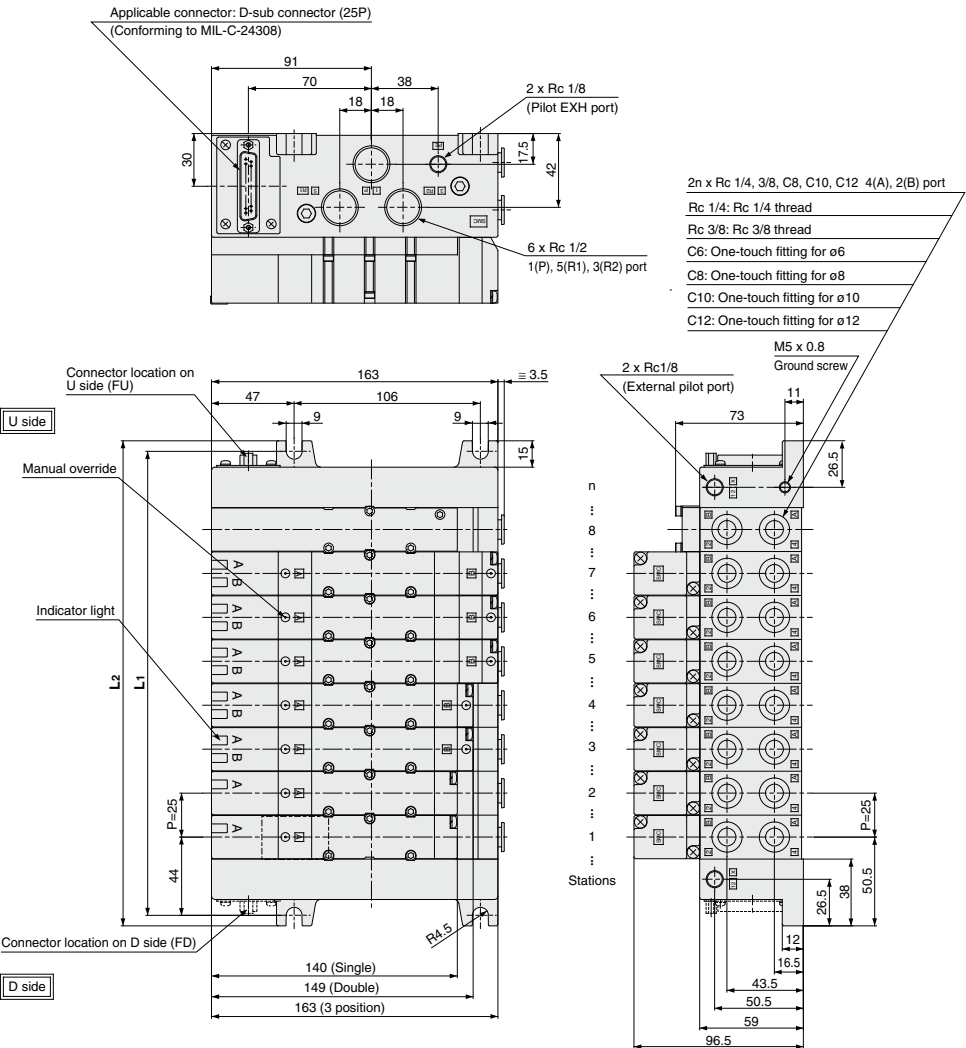

D-sub connector kit with cable (3 m)
V5Q41-05C8FD2(-Q)-1 set —Manifold base part no.
*VQ4100-5(-Q).....2 sets —Valve part no. (Stations 1 and 2)
*VQ4200-5(-Q).....2 sets —Valve part no. (Stations 3 and 4)
*VQ4300-5(-Q).....1 set —Valve part no. (Station 5)

Prefix the asterisk to the part nos. of the solenoid valve, etc.

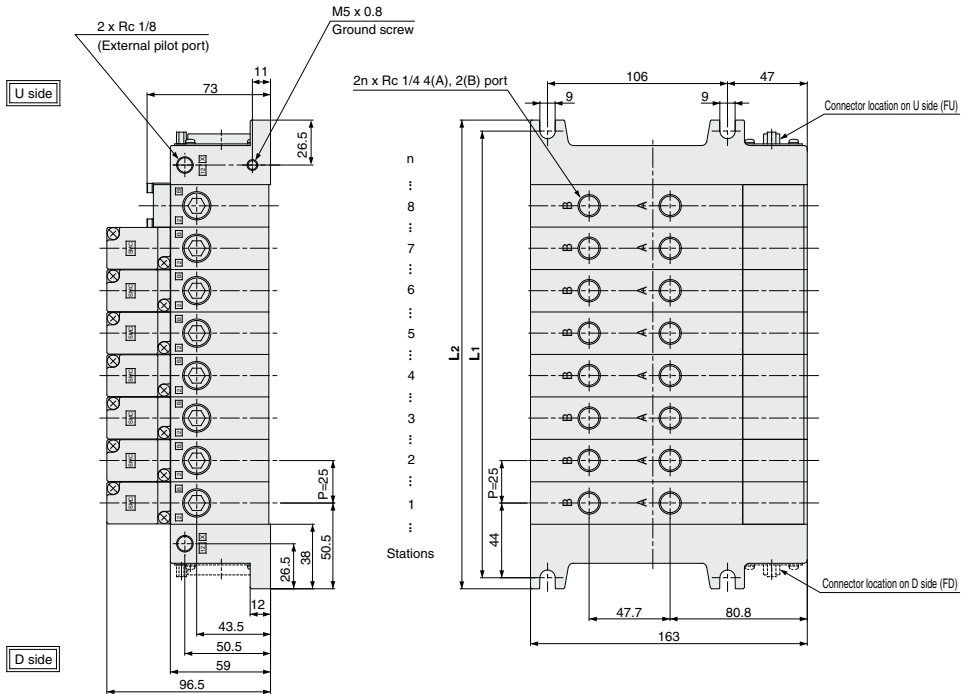

Enter in order starting from the first station on the D side. When entry of part numbers becomes complicated, indicate in the manifold specification sheet.

Series VQ4000

T Kit (Terminal block box kit)

IP65 compliant

- Enclosure IP65 compliant
- This type has a small terminal block inside a junction box.
The provision of a G 3/4 electrical entry allows connection of conduit fittings.
- Maximum stations are 18.
- 2 stations are used for terminal box mounting.

Manifold Specifications

Series	Porting specifications			Applicable stations
	4(A), 2(B) port location	Port size		
		1(P), 5(R1), 3(R2)	4(A), 2(B)	
VQ4000	Side	Rc 1/2	C8, 10, 12 Rc 1/4, 3/8	Max. 18 stations
	Bottom		Rc 1/4	

Terminal Block Connections

Step 1. How to remove terminal block cover
Loosen the 4 mounting screws (M4) and open the terminal block cover.

Step 2. The diagram on the right shows the terminal block wiring. All stations are provided with double wiring regardless of the valves which are mounted.
Connect each wire to the power supply side, according to the markings provided inside the terminal block.

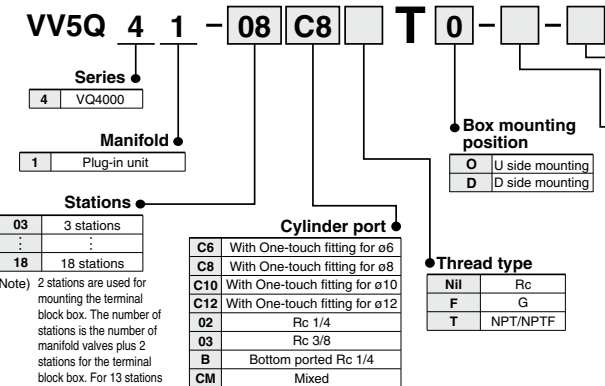

Step 3. How to attach the terminal block cover
Securely tighten the screws with the torque shown in the table below, after confirming that the gasket is installed correctly.

Proper tightening torque (N·m)
0.7 to 1.2

- Applicable terminal 1.25-3S, 1.25Y-3, 1.25Y-3N, 1.25Y-3.5
- Name plate: VVQ5000-N-T
- Drip proof plug assembly (for G 3/4): AXT100-B06A

How to Order Manifold

Note) 2 stations are used for mounting the terminal block box. The number of stations is the number of manifold valves plus 2 stations for the terminal block box. For 13 stations or more, specify the wiring specifications by means of the manifold specification sheet.

Note) As a semi-standard specification, the maximum number of stations can be increased by special wiring specifications. For details, refer to page 1077.

Stations are counted starting from the first station on the D side.

Electrical wiring specifications

Double wiring (connected to SOL A and SOL B) is adopted for the internal wiring of each station, regardless of valve and option types. Mixed single and double wiring is available as a semi-standard specification.

Note) There is no polarity. It can also be used as a negative common.

common common

Special Wiring Specifications

Double wiring (connected to SOL A and SOL B) is used for the internal wiring of each station regardless of valve and option types. The optional specification permits mixture of single and double wiring. However, the maximum number of stations is 16.

1. How to Order

Indicate option symbol "K" in the manifold part number and be sure to specify station positions for single or double wiring on the manifold specification sheet.

2. Wiring specifications

Connections begin with the A side solenoid of the first station being connected to terminal no. 1, and continue in the order indicated by the arrows in the drawing without skipping any terminals.

Note 1) Applicable to DC specifications. Please select when you expect to energize the unit for extended periods of time. Refer to page 3 for details.

Note 2) Refer to page 1097 for external pilot specification. Combination of external pilot and perfect interface is not possible.

Note 3) When two or more symbols are specified, indicate them alphabetically.

How to Order Manifold Assembly

Specify the part numbers for valves and options together beneath the manifold base part number.

<Example>

Terminal block box kit

VV5Q41-07C8T0(Q)-1 set—Manifold base part no.

*VQ4100-5(Q).....2 sets—Valve part no. (Stations 1 and 2)

*VQ4200-5(Q).....2 sets—Valve part no. (Stations 3 and 4)

*VQ4300-5(Q).....1 set—Valve part no. (Station 5)

Prefix the asterisk to the part nos. of the solenoid valve, etc.

Enter in order starting from the first station on the D side. When entry of part numbers becomes complicated, indicate in the manifold specification sheet.

Series **VQ4000**

IP65 compliant

- Enclosure IP65 compliant
- Direct electrical entry. Models with two or more stations are available.
- Electrical entry can be selected on either the U side or the D side according to the mounting orientation.
- Maximum stations are 16.

Manifold Specifications

Series	Porting specifications			Applicable stations
	4(A), 2(B) port location	Port size		
		1(P), 5(R1), 3(R2)	4(A), 2(B)	
VQ4000	Side	Rc 1/2	C 8, 10, 12 Rc 1/4, 3/8	Max. 16 stations
	Bottom		Rc 1/4	

Wiring Specifications

Three lead wires are attached to each station regardless of the type of valve which is mounted.
The red wire is for COM connection.

Lead Wire Assembly with Connector

Lead wire length	Part no.
0.6 m	VVQ5000-44A-8-□
1.5 m	VVQ5000-44A-15-□
3 m	VVQ5000-44A-30-□

□: Number of stations 1 to 16.

For different lead wire lengths, order a lead wire assembly with connector shown in the table on the right.
Note 1) There is no polarity. It can also be used as a negative common.
Note 2) Connect the release valve and the pressure switch to SOL. A side on the manifold with control unit.

Manifold Option Parts

Blanking plate assembly

VVQ4000-10A-1 (Plug-in type) VVQ4000-10A-5 (Plug lead type)

It is used by attaching on the manifold block for being prepared for removing a valve for maintenance reasons or planning to mount a spare valve, etc.

Circuit diagram

Individual SUP spacer

VVQ4000-P-1- $\frac{02}{03}$ (Plug-in type) VVQ4000-P-5- $\frac{02}{03}$ (Plug lead type)

By mounting individual SUP spacers on a manifold block, it is possible to provide individual supply ports for each valve.

Circuit diagram

Individual EXH spacer

VVQ4000-R-1- $\frac{02}{03}$ (Plug-in type) VVQ4000-R-5- $\frac{02}{03}$ (Plug lead type)

By mounting individual EXH spacers on a manifold block, exhaust ports can be provided individually for each valve. (Common EXH type)

Circuit diagram

Throttle valve spacer

VVQ4000-20A-1 (Plug-in type) VVQ4000-20A-5 (Plug lead type)

A throttle valve spacer is mounted on a manifold block to control cylinder speed by throttling exhaust air flow.

Circuit diagram

SUP stop valve spacer

VVQ4000-37A-1 (Plug-in type) VVQ4000-37A-5 (Plug lead type)

A SUP stop valve spacer is mounted on a manifold block, making it possible to individually shut off supply air to each valve.

Circuit diagram

Release valve spacer: For D side mounting

VVQ4000-24A-1D (Plug-in type) VVQ4000-24A-5D (Plug lead type)

Combination of VQ41□□ (Single) and release valve spacer can be used as air release valve.

- Note 1) Mounting on 2 position double and 3 position valve is not possible.
Note 2) Can be mounted on L kit only. For other kits, order E type control unit. (Refer to pages 1098 to 1101.)

Circuit diagram

SUP/EXH block plate

VVQ4000-16A

When supplying two different pressures to one manifold, this is used to shut off between stations with different pressures.

SUP passage blocked

EXH passage blocked

SUP/EXH passage blocked

Manifold Option Parts

Direct exhaust with silencer box

VV5Q4 $\frac{1}{2}$ -□□□-SB (Exhaust from both sides)

VV5Q4 $\frac{1}{2}$ -□□□-SD (D side exhaust)

VV5Q4 $\frac{1}{2}$ -□□□-SU (U side exhaust)

The EXH outlet is placed on the top side of the manifold end plate. The built-in silencer provides highly effective noise reduction.

(Noise reduction of 35 dB or more)

Effective area: 60.2 mm²

Note) If a lot of drainage is generated at air supply source, both of exhaust air and drainage are exhausted.

Type SD

Type SU

Note) Figure shows VV5Q4 $\frac{1}{2}$ -□□□-SD.

● Silencer box assembly: VVQ4000-33A (With gasket, screw)

Double check spacer with residual pressure exhaust

VVQ4000-25A-1 (Plug-in type)

VVQ4000-25A-5 (Plug lead type)

Can hold an intermediate cylinder position for an extended time.

If the double check spacer with a built-in double check valve is combined, it will enable the cylinder to stop in the intermediate stroke and maintain its position for a long time without being affected by the leakage between the spools.

Besides, combination between 2 position solenoid valve (VQ4 $\frac{1}{2}$ □□) and double check spacer can't hold an intermediate position, but can prevent dropping at the cylinder stroke end.

Specifications

Double check spacer part no.	VVQ4000-25A- $\frac{1}{5}$	
	Intermediate stop	Drop prevention
Applicable solenoid valve	VQ44□□	VQ4 $\frac{1}{2}$ □□

Caution

Handling Precautions

- Air leakage from the pipe between the valve and cylinder or from the fittings will prevent the cylinder from stopping in the middle for a long time. Check for leakage using a neutral household detergent, such as dish washing soap. Also, check the cylinder sealing and piston seal for leakage.
- Since One-touch fittings allow slight air leakage, screw piping is recommended when stopping the cylinder in the middle for a long time.
- If exhaust side of double check spacer is narrowed down, this causes a decrease in intermediate stop accuracy and may malfunction.
- Combining perfect interface with 3 position valves "VQ4 $\frac{1}{2}$ □□" will not work.
- Set the cylinder load so that the cylinder pressure will be within two times that of the supply pressure.
- Combining double check spacer with external pilot will not work.

Plug-in type

Plug lead type

Manual override for residual pressure exhaust
Slotted locking type (Tool required)

Manifold mounted exhaust cleaner

VV5Q4 $\frac{1}{2}$ -□□□-CD (D side mounting)

VV5Q4 $\frac{1}{2}$ -□□□-CU (U side mounting)

An adapter plate for exhaust cleaner mounting is provided on the top of the manifold end plate. The exhaust cleaner collects drainage and oil mist (99.9% or more) and is highly effective for noise reduction.
(Noise reduction of 35 dB or more)

Applicable exhaust cleaners AMC610-10 (Port size Rc 1)

Note 1) Exhaust cleaner AMC610-10 is not attached.

Please order it separately.

Note 2) Mount so that the exhaust cleaner is at the lower side.

Note 3) For details about the exhaust cleaner, refer to Best Pneumatics No. 6.

Manifold Option Parts

Interface regulator (P, A, B port regulation)

ARBQ4000-00-□-1 (Plug-in type)

ARBQ4000-00-□-5 (Plug lead type)

Spacer Interface regulators can be placed on top of the manifold block to reduce the pressure of each of the valves.

Specifications

Interface regulator		ARBQ4000					
Regulating port		A		B		P	
Applicable solenoid valve		Plug-in	Plug lead	Plug-in	Plug lead	Plug-in	Plug lead
Maximum operating pressure		1.0 MPa					
Set pressure range		0.05 to 0.85 MPa					
Fluid		Air					
Ambient and fluid temperature		-5 to 60°C (No freezing)					
Port size for connection of pressure gauge		M5 x 0.8					
Weight (kg)		0.33	0.30	0.33	0.30	0.33	0.30
Effective area at supply side (mm ²)		P → A	15	P → B	31	P → P	14
S at P ₁ = 0.7 MPa/P ₂ = 0.5 MPa		P → B	35	P → A	16	P → P	15
Effective area at exhaust side (mm ²)		A → EA	18	B → EB	40	P → EP	40
S at P ₂ = 0.5 MPa		B → EB	37	A → EA	19	P → EP	37

- Note 1) Set the pressure within the operating pressure range of the solenoid valve.
- Note 2) Operate an interface regulator only by applying pressure from the P port of the base, except when using it as a reverse pressure valve. When using it as a reverse pressure valve, P port regulation is not allowed to use.
- Note 3) When using a perfect spacer, assemble a valve, a spacer regulator and a perfect spacer in this order to use it.
- Note 4) When using in A port regulation, B port regulation by closed center, since there is a problem in its operation, please contact SMC.
- Note 5) Dust tight/Low jetproof enclosure (IP65) is not available with interface regulator.

How to Order

Solenoid Valve	Interface regulator	Regulating port

Semi-standard Specifications

External Pilot Specifications

- When the supply air pressure is:
 - lower than the required minimum operating pressure 0.15 to 0.2 MPa,
 - opposite air supply (R port supply), cylinder supply (A and B port supply),
 - used for vacuum specifications (please contact SMC),
 it can be used for external pilot specifications.
- Order a valve by adding the external pilot specification [R] to the part number. External pilot is available as standard for manifolds and options.
- Internal/external pilot can be mounted in a manifold.
- Compatibility with universal porting is possible for the single, double and 3P (excluding perfect spacer) types.

How to Order Manifold

VQ4100 **[R]** - 5 - 03

- External pilot specifications

Note) Possible to mix mounting of internal and external pilot

Pressure Specifications

Valve construction		Metal seal	Rubber seal
Operating pressure range		Vacuum to 1.0 MPa	
External pilot ^{Note)} pressure range	Single		0.2 to 1.0 MPa (0.2 to 0.7 MPa)
	Double	0.15 to 1.0 MPa (0.15 to 0.7 MPa)	0.15 to 1.0 MPa (0.15 to 0.7 MPa)
	3 position		0.2 to 1.0 MPa (0.2 to 0.7 MPa)

Note) Values inside () denote the low wattage (0.5 W) specifications.

Combination of manifold options shown below and external pilot specification is not possible.

Manifold with Control Unit

- Mounting air filter, regulator, pressure switch for air release valve on manifold as unit is possible and permits piping labor savings.
- Maximum number of stations depends on each kit.
- Refer to manifold specifications.
- 2 stations are used for control unit mounting.
(1 station is used for E type.)

Plug-in type

Plug Lead Type

Caution

In the case of air filters with auto-drain or manual drain, mount so that the air filter is at the bottom.

Note 1) When two or more symbols are specified, indicate them alphabetically.
Example) -KN

Note 2) Specify wiring on the manifold specification sheet.

Note 3) Mounting on S and T kits is not possible.

Note 4) Combination with pressure switch (AP and MP type) is not possible.

Note 5) The release valve and the pressure switch on S kit are connected to another power supply. Cable length is 0.6 m.

Note) Electrical entry:
Control unit can not be removed except L and C kits.

Use of Control Unit

<Construction and piping>

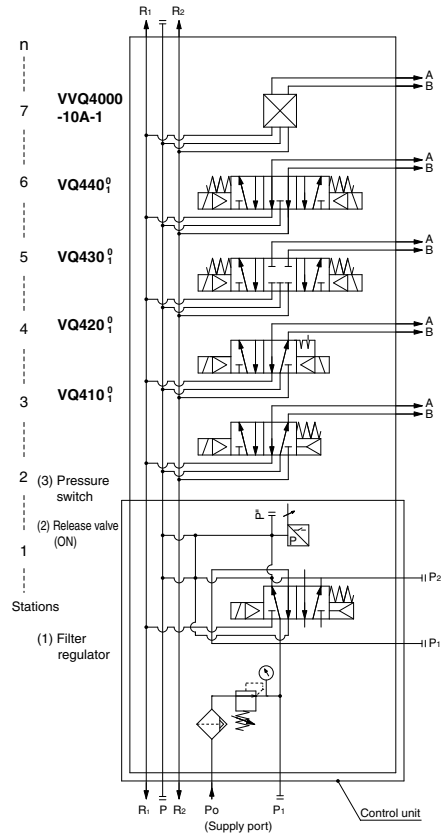

1. The supply pressure (P_o) passes through the filter regulator (1) and is adjusted to the prescribed pressure. Next, it goes through the release valve (2) (outlet residual pressure switching function used as normally ON) and is supplied to the manifold base side (P).
2. Supply pressure from P_o port is blocked when release valve (2) is OFF. Air supplied to manifold side P port is exhausted to R1 port through release valve (2).
3. Pressure switch is piped at outlet side of release valve (2). (Release valve (2) is operated at energizing.)
Also, since there is an internal voltage drop of 4 V, it may not be possible to confirm the OFF and ON states with a tester, etc.

<Wiring>

1. Electrical entry of manifold (except L and C kit) is individual wiring. For details, refer to internal wiring figure of each kit. Cable length is 0.6 m for L kit.

<Change of pressure switch piping>

1. Pressure switch (3) is changed to piping on inlet side of release valve (2), remove the pressure switch, reverse the gasket up and down, and fix **[B]** mark.
2. When pressure switch is mounted, tightening torque of bolt is 0.8 to 1.2 N·m.

5	VVQ4000-80A-2	Gasket	HNBR	10
6	VVQ4000-80A-4	Clip	Stainless steel	10

Note) Spare parts consist of sets containing 10 pcs. each.

<Fitting Assembly>

7. Fitting assembly part no. (For cylinder port)

<D-sub connector assembly>

Series VQ4000

Specific Product Precautions 1

Be sure to read before handling.

Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

Manual Override Operation

Warning

Since connected equipment will be actuated when the manual override is operated, first confirm that conditions are safe.

Non-locking push type (tool required) is standard. As a semi-standard specification, slotted locking type (tool required) is available.

Push type (Tool required)

Push down on the manual override button with a small screwdriver until it stops. Release the screwdriver and the manual override will return.

Locking type (Tool required) <Semi-standard>

Push down completely on the manual override button with a small screwdriver. While down, turn clockwise 90° to lock it. Turn it counterclockwise to release it.

Mounting of Valves

Caution

After confirming the gasket is correctly placed under the valve, securely tighten the bolts with the proper torque shown in the table below.

Proper tightening torque

0.8 to 1.2

Changing the One-touch Fittings

Caution

The built-in One-touch fittings on the cylinder port side are easily replaceable because of the cassette type. Clip prevents the fittings to come off. After removing the corresponding valve and take out the clip with a screwdriver, etc., then replace the fittings. About mounting the fittings, after inserting the fitting until it stops, then put the clip into the prescribed position.

Lead Wire Connection

Caution

Plug-in sub-plate (With terminal block)

- If the junction cover (1) of the sub-plate is removed, you can see the plug-in type terminal block (2) mounted inside the sub-plate.

- The terminal block is marked as follows. Connect wiring to each of the power supply terminals.

Model	Terminal block marking	A	COM	B	⌚
VQ410 ⁰ ₁	A side	COM	—	—	—
VQ420 ⁰ ₁	A side	COM	B side	—	—
VQ4 ³ ₀ ⁰ ₁	A side	COM	B side	—	—

Note 1) There is no polarity. It can also be used as -COM.

Note 2) Double wiring is used on sub-plate VQ410⁰₁.

- Applicable terminal 1.25-3S, 1.25Y-3, 1.25Y-3N, 1.25Y-3.5

Plug lead: Grommet type

Make connections to each corresponding wire.

Single solenoid

Double solenoid

	Single solenoid	Double solenoid
Standard	Black: A side solenoid Red: COM	Black: A side solenoid Red: COM White: B side solenoid
Enclosure IP65 compliant	Black: A side solenoid Red: COM White: B side solenoid (Not used for single solenoid)	

(Note) There is no polarity. It can also be used as -COM.

Series VQ4000

Specific Product Precautions 2

Be sure to read before handling.

Refer to front matter 53 for Safety Instructions and pages 3 to 8 for 3/4/5 Port Solenoid Valve Precautions.

Installation and Removal of Light Cover

⚠ Caution

Installation/Removal of light cover

● Removal

Open the cover by inserting a small flat head screwdriver into the slot on the side of the pilot assembly (see drawing below), lift the cover out about 1 mm and then pull off. If it is pulled off at an angle, the pilot valve may be damaged or the protective O-ring may be scratched.

● Installation

Place the cover straight over the pilot assembly so that the pilot valve is not touched, and push it until the cover hook locks without twisting the protective O-ring. (When pushed in, the hook opens and locks automatically.)

Replacement of Pilot Valve

⚠ Caution

● Removal

- 1) Remove the mounting screw that holds the pilot valve using a small screwdriver.

● Installation

- 1) After confirming the gasket is correctly placed under the valve, securely tighten the bolts with the proper torque shown in the table below.

Proper tightening torque (N·m)

0.1 to 0.13

Note) The light circuit boards: A side is orange and the B side is green. It must be mounted on the pilot valve in accordance with the mounting indicators.

For Plug Lead Type

Attaching and detaching connectors

- To attach a connector, hold the lever and connector unit between your fingers and insert straight onto the pins of the solenoid valve so that the lever's pawl is pushed into the groove and locks.

- To detach a connector, remove the pawl from the groove by pushing the lever downward with your thumb, and pull the connector straight out.

Note) Do not pull on the lead wires with excessive force. This can cause faulty and/or broken contacts.

Internal Wiring Specifications

⚠ Caution

DC: Single

DC: Double

AC: Single

AC: Double

Note) For DC, coil surge voltage generated when OFF is about -60V. Contact SMC separately for further suppression of the coil surge voltage.

Enclosure IP65

⚠ Caution

Wires, cables, connectors, etc. used for models conforming to IP65 should also have enclosures equivalent to or stricter rating than IP65.

How to Calculate the Flow Rate

For obtaining the flow rate, refer to front matters 42 to 45.
