

# 2 Port Solenoid Valve with Built-in Y-strainer

Series **VXK**

For Air, Water, Oil, Steam

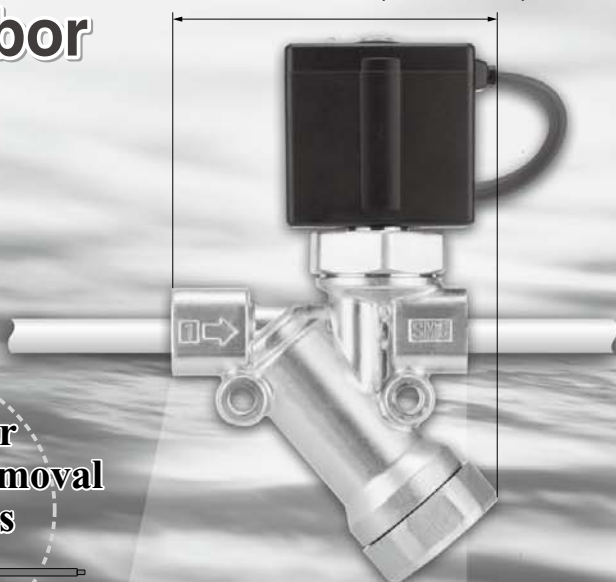

RoHS

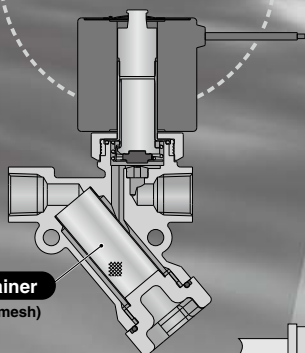

IP65

**Space saving  
and reduced  
piping labor**

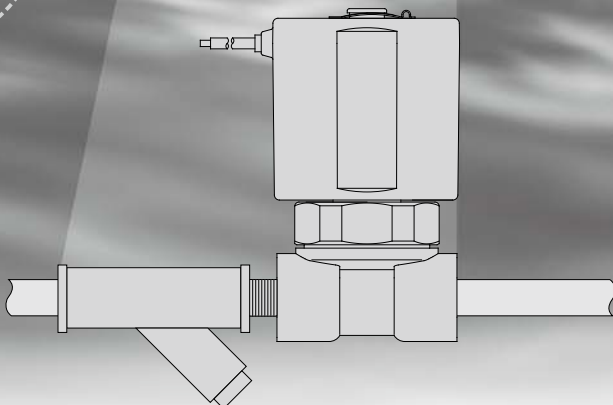

**60 mm (VXK21)**  
**63.5 mm (VXK22/23)**

**Built-in strainer  
enabling the removal  
of contaminants**

**Strainer**  
(100 mesh)

Element can be replaced without removing piping.

## Variations

### Direct Operated: Series VXK21/22/23

#### Valve

Normally closed (N.C.)

Normally open (N.O.)

#### Solenoid Coil

Coil: Class B, Class H

#### Rated Voltage

AC: 100 V, 200 V, 110 V, 220 V, 240 V  
230 V, 48 V

DC: 24 V, 12 V

#### Material

Body: C37

Seal: NBR, FKM, EPDM, PTFE

#### Electrical Entry

Grommet

Conduit

DIN terminal

Conduit terminal

#### Normally Closed (N.C.)

## Common Specifications

### Standard Specifications

Valve specifications	Valve construction		Direct operated poppet	
	Withstand pressure	MPa	5.0	
	Body material		C37	
	Seal material		NBR, FKM, EPDM, PTFE	
	Enclosure		Dust-tight, Water-jet-proof type (IP65) <sup>Note)</sup>	
	Environment		Location without corrosive or explosive gases	
Strainer specifications	Mesh		100	
	Material		Stainless steel	
Coil specifications	Rated voltage	AC	100 VAC, 200 VAC, 110 VAC, 220 VAC, 230 VAC, 240 VAC, 48 VAC	
		DC	24 VDC, 12 VDC	
	Allowable voltage fluctuation		±10% of rated voltage	
	Allowable leakage voltage	AC (Class B, Built-in full-wave rectifier type)		10% or less of rated voltage
		AC (Class B/H)		20% or less of rated voltage
		DC (Class B only)		2% or less of rated voltage
Coil insulation type		Class B, Class H		

Note) Electrical entry: Grommet with surge voltage suppressor (GS) has a rating of IP40.

### Solenoid Coil Specifications

#### Normally Closed (N.C.)

##### DC Specification

Model	Power consumption (W)	Temperature rise (C°) <sup>Note)</sup>
VKK21	4.5	45
VKK22	7	45
VKK23	10.5	60

##### AC Specification (Class B, Built-in full-wave rectifier type)

Model	Apparent power (VA)*	Temperature rise (C°) <sup>Note)</sup>
VKK21	7	55
VKK22	9.5	60
VKK23	12	65

\* There is no difference in the frequency and the inrush and energized apparent power because a rectifying circuit is used in the AC (Class B, Built-in full-wave rectifier type).

Note) Value at ambient temperature of 20°C and when the rated voltage is applied.

##### AC Specification

Model	Frequency (Hz)	Apparent power (VA)		Temperature rise (C°) <sup>Note)</sup>
		Inrush	Energized	
VKK21	50	19	10	50
	60	16	8	45
VKK22	50	43	20	65
	60	35	17	60
VKK23	50	62	32	65
	60	52	27	60

Note) Value at ambient temperature of 20°C and when the rated voltage is applied.

#### Normally Open (N.O.)

##### DC Specification

Model	Power consumption (W)	Temperature rise (C°) <sup>Note)</sup>
VKK21	4.5	45
VKK22	7	45
VKK23	10.5	60

##### AC Specification (Class B, Built-in full-wave rectifier type)

Model	Apparent power (VA)*	Temperature rise (C°) <sup>Note)</sup>
VKK21	7	55
VKK22	9.5	60
VKK23	12	65

\* There is no difference in the frequency and the inrush and energized apparent power because a rectifying circuit is used in the AC (Class B, Built-in full-wave rectifier type).

Note) Value at ambient temperature of 20°C and when the rated voltage is applied.

##### AC Specification

Model	Frequency (Hz)	Apparent power (VA)		Temperature rise (C°) <sup>Note)</sup>
		Inrush	Energized	
VKK21	50	22	11	55
	60	18	8	50
VKK22	50	46	20	65
	60	38	18	60
VKK23	50	64	32	65
	60	54	27	60

Note) Value at ambient temperature of 20°C and when the rated voltage is applied.

## Applicable Fluid Check List

	6	VXXK2242-03	0.25	4.0	0.30	1.10		
		VXXK2342-03	0.45					

Note) Weight of grommet type. Add 10 g for conduit type, 30 g for DIN terminal type, 60 g for conduit terminal type respectively.

- Refer to "Glossary of Terms" on page 97 for details on the max. operating pressure differential and the max. system pressure.

### Valve Leakage

#### Internal Leakage

Seal material	Leakage rate	
	Air	Non-leak, Medium vacuum (Note)
NBR, FKM	1 cm <sup>3</sup> /min or less	10 <sup>-6</sup> Pa·m <sup>3</sup> /sec or less

#### External Leakage

Seal material	Leakage rate	
	Air	Non-leak, Medium vacuum (Note)
NBR, FKM	1 cm <sup>3</sup> /min or less	10 <sup>-6</sup> Pa·m <sup>3</sup> /sec or less

Note) Value for option "V" (Non-leak, Medium vacuum)

## How to Order (Single Unit)

**Model** Refer to the Table (1) shown below for availability.

**Orifice size** Refer to the Table (1) shown below for availability.

**Valve/Body configuration**

0	N.C./Single unit
2	N.O./Single unit

**Solenoid valve option** Refer to the Table (2) shown below for availability.

**Suffix**

Nil	—
Z	Oil-free

Select nil because the solenoid valve option "V" is the oil-free treatment.

**Thread type**

Nil	Rc
T	NPTF
F	G
N	NPT

**Rated voltage**

1	100 VAC 50/60 Hz	6	12 VDC
2	200 VAC 50/60 Hz	7	240 VAC 50/60 Hz
3	110 VAC 50/60 Hz	8	48 VAC 50/60 Hz
4	220 VAC 50/60 Hz	J	230 VAC 50/60 Hz
5	24 VDC		

\* Refer to the Table (3) shown below for availability.

Refer to page 88 for ordering a coil only.

**Port size** Refer to the Table (1) shown below for availability.

**Bracket**

Nil	None
B	With bracket

\* Packed in the same container as the main body.  
\* Refer to the Table (4) when a bracket is ordered separately.

**Built-in full-wave rectifier type**

**Electrical entry**

**G - Grommet**  
GS - With grommet surge voltage suppressor

**C - Conduit**

**Connector**

**T** - With conduit terminal  
**TS** - With conduit terminal and surge voltage suppressor  
**TL** - With conduit terminal and light  
**TZ** - With conduit terminal, surge voltage suppressor and light

**D** - DIN terminal  
**DS** - DIN terminal with surge voltage suppressor  
**DL** - DIN terminal with light  
**DZ** - DIN terminal with surge voltage suppressor and light  
**DO** - For DIN terminal (without connector, gasket is included.)

\* DIN type is available with class B only.

Port symbol (Port size)	01 (1/8)	—	—	●	●	●	—	—
	02 (1/4)	—	—	●	●	●	—	—
	—	02 (1/4)	02 (1/4)	—	●	●	●	●
	—	03 (3/8)	03 (3/8)	—	●	●	●	●

### Normally Open (N.O.)

Solenoid valve (Port size)				Orifice symbol (Diameter)			
Model	VXK21	VXK22	VXK23	1 (2 mm)	2 (3 mm)	3 (4.5 mm)	4 (6 mm)
Port symbol (Port size)	01 (1/8)	—	—	●	●	●	—
	02 (1/4)	—	—	●	●	●	—
	—	02 (1/4)	02 (1/4)	—	●	●	●
	—	03 (3/8)	03 (3/8)	—	●	●	●

**Table (2) Solenoid Valve Option**

Option symbol	Seal material	Body material	Coil insulation type	Remarks
Nil	NBR	C37	B	—
V	FKM			Non-leak ( $10^{-6}$ Pa·m <sup>3</sup> /sec), Oil-free, Medium vacuum (0.1 Pa.abs)

\* When using with vacuum, consider the max. differential pressure. (0.1 MPa or more is recommended.)

**Fluid: Air**

When you operate the **VX series** (AC spec.) by air, the built-in full-wave rectifier type is chosen.

• The special construction of the armature reduces abrasion, resulting in a longer service life.

• Noise reduction

Best suited for medical equipment, low-noise environments, etc.

**Table (3) Rated Voltage/Electrical Option**

Rated voltage			Class B		
AC/DC	Voltage symbol	Voltage	S With surge voltage suppressor	L With light	Z With light and surge voltage suppressor
AC	1	100 V	—	●	—
	2	200 V	—	●	—
	3	110 V	—	●	—
	4	220 V	—	●	—
	7	240 V	—	—	—
	8	48 V	—	—	—
	J	230 V	—	—	—
DC	5	24 V	●	●	●
	6	12 V	●	—	—

\* Option "S", "Z" are not available because a surge voltage suppressor is integrated into the AC/Class B, built-in full-wave rectifier type as a standard.

**Table (4) Bracket Part No.**

Solenoid valve option symbol		
A	D	
-5 <sup>Note)</sup> to 60	-5 <sup>Note)</sup> to 120	-20 to 60

Note) Dynamic viscosity: 50 mm<sup>2</sup>/s or less

### Valve Leakage

#### Internal Leakage

Seal material	Leakage rate (Oil)
FKM	0.1 cm <sup>3</sup> /min or less

#### External Leakage

Seal material	Leakage rate (Oil)
FKM	0.1 cm <sup>3</sup> /min or less

## How to Order (Single Unit)

**Model** Refer to the Table (1) shown below for availability.

**Orifice size** Refer to the Table (1) shown below for availability.

**Valve/Body configuration**

0	N.C./Single unit
2	N.O./Single unit

**Solenoid valve option** Refer to the Table (2) shown below for availability.

**Suffix**

Nil	—
Z	Oil-free

Oil-free, AC/Class B: Built-in full-wave rectifier type only. Select the built-in full-wave rectifier type.

**Thread type**

Nil	Rc
T	NPTF
F	G
N	NPT

**Rated voltage**

1	100 VAC 50/60 Hz	6	12 VDC
2	200 VAC 50/60 Hz	7	240 VAC 50/60 Hz
3	110 VAC 50/60 Hz	8	48 VAC 50/60 Hz
4	220 VAC 50/60 Hz	J	230 VAC 50/60 Hz
5	24 VDC		

\* Refer to the Table (3) shown below for availability.

Refer to page 88 for ordering a coil only.

**Bracket**

Nil	None
B	With bracket

\* Packed in the same container as the main body.  
\* Refer to the Table (4) when a bracket is ordered separately.

**Full-wave rectifier**

Nil	None
R	Built-in full-wave rectifier type (Class B only)

**Electrical entry**

**G - Grommet**  
GS - With grommet surge voltage suppressor

**C - Conduit**

**T** - With conduit terminal  
**TS** - With conduit terminal and surge voltage suppressor  
**TL** - With conduit terminal and light  
**TZ** - With conduit terminal, surge voltage suppressor and light

**D** - DIN terminal  
**DS** - DIN terminal with surge voltage suppressor  
**DL** - DIN terminal with light  
**DZ** - DIN terminal with surge voltage suppressor and light  
**DO** - For DIN terminal (without connector, gasket is included.)

Connector

\* DIN type is available with class B only.

**Table (1) Model/Orifice Size/Port Size**

# Solenoid Valve Flow Characteristics

## (How to indicate flow characteristics)

### 1. Indication of flow characteristics

The flow characteristics in equipment such as a solenoid valve, etc. are indicated in their specifications as shown in the Table (1).

**Table (1) Indication of flow characteristics**

Corresponding equipment	Indication by international standard	Other indications	Conformed standard
Pneumatic equipment	$C, b$	—	ISO 6358: 1989 JIS B 8390: 2000
	—	$S$	JIS B 8390: 2000 Equipment: JIS B 8373, 8374, 8375, 8379, 8381
		$C_v$	ANSI/(NFPA)T3.21.3: 1990
Process fluid control equipment	$A_v$	—	IEC60534-2-3: 1997 JIS B 2005: 1995
	—	$C_v$	Equipment: JIS B 8471, 8472, 8473

### 2. Pneumatic equipment

#### 2.1 Indication according to the international standards

(1) Conformed standard

**ISO 6358: 1989** : Pneumatic fluid power—Components using compressible fluids—  
Determination of flow-rate characteristics

**JIS B 8390: 2000** : Pneumatic fluid power—Components using compressible fluids—  
How to test flow-rate characteristics

(2) Definition of flow characteristics

The flow characteristics are indicated as a result of a comparison between sonic conductance **C** and critical pressure ratio **b**.

**Sonic conductance C** : Value which divides the passing mass flow rate of an equipment in a choked flow condition by the product of the upstream absolute pressure and the density in a standard condition.

**Critical pressure ratio b** : Pressure ratio (downstream pressure/upstream pressure) which will turn to a choked flow when the value is smaller than this ratio.

**Choked flow** : The flow in which the upstream pressure is higher than the downstream pressure and where sonic speed in a certain part of an equipment is reached.

Gaseous mass flow rate is in proportion to the upstream pressure and not dependent on the downstream pressure.

**Subsonic flow** : Flow greater than the critical pressure ratio

**Standard condition** : Air in a temperature state of 20°C, absolute pressure 0.1 MPa (= 100 kPa = 1 bar), relative humidity 65%.

It is stipulated by adding the "(ANR)" after the unit depicting air volume.  
(standard reference atmosphere)

Conformed standard: ISO 8778: 1990 Pneumatic fluid power—Standard reference

atmosphere, JIS B 8393: 2000: Pneumatic fluid power—Standard reference atmosphere

(3) Formula for flow rate

It is described by the practical units as following.

When

$$\frac{P_2 + 0.1}{P_1 + 0.1} \leq b, \text{ choked flow}$$

$$Q = 600 \times C (P_1 + 0.1) \sqrt{\frac{293}{273 + t}} \quad \text{.....(1)}$$

When

$$\frac{P_2 + 0.1}{P_1 + 0.1} > b, \text{ subsonic flow}$$

$$Q = 600 \times C (P_1 + 0.1) \sqrt{1 - \left[ \frac{\frac{P_2 + 0.1}{P_1 + 0.1} - b}{1 - b} \right]^2} \sqrt{\frac{293}{273 + t}} \quad \text{..... (2)}$$

**Q** : Air flow rate [dm<sup>3</sup>/min (ANR)], dm<sup>3</sup> (Cubic decimeter) of SI unit are also allowed to be described by L (liter). 1 dm<sup>3</sup> = 1 L

**C** : Sonic conductance [dm<sup>3</sup>/(s·bar)]

**b** : Critical pressure ratio [—]

**P<sub>1</sub>** : Upstream pressure [MPa]

**P<sub>2</sub>** : Downstream pressure [MPa]

**t** : Temperature [°C]

Note) Formula of subsonic flow is the elliptic analogous curve.

Flow characteristics are shown in Graph (1) For details, please make use of SMC's "Energy Saving Program".

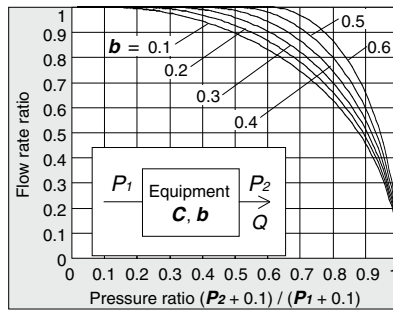

Example)

Obtain the air flow rate for **P<sub>1</sub>** = 0.4 [MPa], **P<sub>2</sub>** = 0.3 [MPa], **t** = 20 [°C] when a solenoid valve is performed in **C** = 2 [dm<sup>3</sup>/(s·bar)] and **b** = 0.3.

According to formula 1, the maximum flow rate =  $600 \times 2 \times (0.4 + 0.1) \times \sqrt{\frac{293}{273 + 20}} = 600$  [dm<sup>3</sup>/min (ANR)]

Pressure ratio =  $\frac{0.3 + 0.1}{0.4 + 0.1} = 0.8$

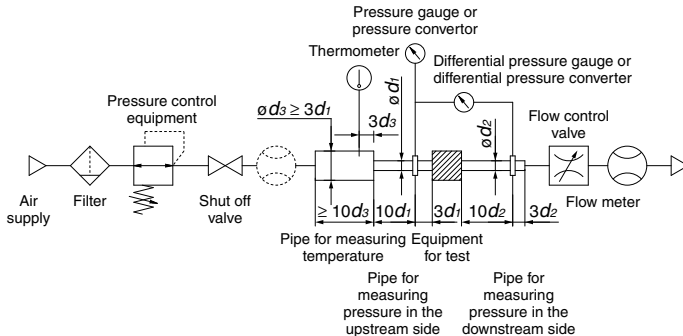

Based on Graph (1), it is going to be 0.7 if it is read by the pressure ratio as 0.8 and the flow rate ratio to be **b** = 0.3. Hence, flow rate = maximum flow rate x flow rate ratio = 600 x 0.7 = 420 [dm<sup>3</sup>/min (ANR)]

**Graph (1) Flow characteristics**

#### (4) Test method

Attach a test equipment with the test circuit shown in Fig. (1) while maintaining the upstream pressure to a certain level which does not go below 0.3 MPa. Next, measure the maximum flow to be saturated in the first place, then measure this flow rate at 80%, 60%, 40%, 20% and the upstream and downstream pressure. And then, obtain the sonic conductance **C** from this maximum flow rate. Besides that, substitute each data of others for the subsonic flow formula to find **b**, then obtain the critical pressure ratio **b** from that average.

**Fig. (1) Test circuit based on ISO 6358, JIS B 8390**

**2.2 Effective area S**

(1) Conformed standard

**JIS B 8390: 2000: Pneumatic fluid power—Components using compressible fluids—**

**Determination of flow rate characteristics**

**Equipment standards: JIS B 8373: 2 port solenoid valve for pneumatics**

**JIS B 8374: 3 port solenoid valve for pneumatics**

**JIS B 8375: 4 port, 5 port solenoid valve for pneumatics**

**JIS B 8379: Silencer for pneumatics**

**JIS B 8381: Fittings of flexible joint for pneumatics**

(2) Definition of flow characteristics

Effective area **S**: The cross-sectional area having an ideal throttle without friction deduced from the calculation of the pressure changes inside an air tank or without reduced flow when discharging the compressed air in a choked flow, from an equipment attached to the air tank. This is the same concept representing the “easy to run through” as sonic conductance **C**.

(3) Formula for flow rate

When

$$\frac{P_2 + 0.1}{P_1 + 0.1} \leq 0.5, \text{ choked flow}$$

$$Q = 120 \times S (P_1 + 0.1) \sqrt{\frac{293}{273 + t}} \quad (3)$$

When

$$\frac{P_2 + 0.1}{P_1 + 0.1} > 0.5, \text{ subsonic flow}$$

$$Q = 240 \times S \sqrt{(P_2 + 0.1) (P_1 - P_2)} \sqrt{\frac{293}{273 + t}} \quad (4)$$

Conversion with sonic conductance **C**:

$$S = 5.0 \times C \quad (5)$$

**Q** : Air flow rate [dm<sup>3</sup>/min (ANR)], dm<sup>3</sup> (cubic decimeter) of SI unit are also allowed to be described by L (liter). 1 dm<sup>3</sup> = 1 L

**S** : Effective area [mm<sup>2</sup>]

**P<sub>1</sub>** : Upstream pressure [MPa]

**P<sub>2</sub>** : Downstream pressure [MPa]

**t** : Temperature [°C]

Note) Formula for subsonic flow (4) is only applicable when the critical pressure ratio **b** is the unknown equipment. In the formula

(2) by the sonic conductance **C**, it is the same formula as when **b** = 0.5.

(4) Test method

Attach a test equipment with the test circuit shown in Fig. (2) in order to discharge air into the atmosphere until the pressure inside the air tank goes down to 0.25 MPa (0.2 MPa) from an air tank filled with the compressed air at a certain pressure level (0.5 MPa) which does not go below 0.6 MPa. At this time, measure the discharging time and the residual pressure inside the air tank which had been left until it turned to be the normal values to determine the effective area **S**, using the following formula. The volume of an air tank should be selected within the specified range by corresponding to the effective area of an equipment for test. In the case of JIS B 8373, 8374, 8375, 8379, 8381, the pressure values are in parentheses and the coefficient of the formula is 12.9.

$$S = 12.1 \frac{V}{t} \log_{10} \left( \frac{P_s + 0.1}{P + 0.1} \right) \sqrt{\frac{293}{T}} \quad (6)$$

**S** : Effective area [mm<sup>2</sup>]

**V** : Air tank capacity [dm<sup>3</sup>]

**t** : Discharging time [s]

**P<sub>s</sub>** : Pressure inside air tank before discharging [MPa]

**P** : Residual pressure inside air tank after discharging [MPa]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

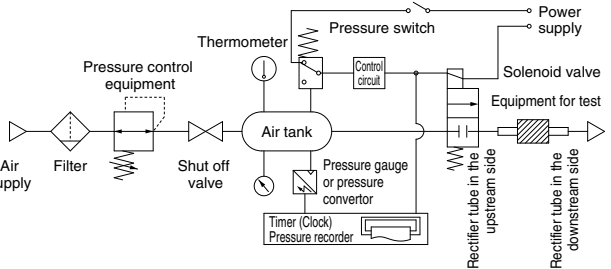

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**T** : Temperature inside air tank before discharging [K]

**Fig. (2) Test circuit based on JIS B 8390**

### 2.3 Flow coefficient $C_v$ factor

**The United States Standard ANSI(NFPA)T3.21.3:1990: Pneumatic fluid power—Flow rating test procedure and reporting method for fixed orifice components**

Defines the  $C_v$  factor of flow coefficient by the following formula which is based on the test conducted by the test circuit analogous to ISO 6358.

$$C_v = \frac{Q}{114.5 \sqrt{\frac{\Delta P (P_2 + P_a)}{T_1}}} \quad (7)$$

$\Delta P$  : Pressure drop between the static pressure tapping ports [bar]

$P_1$  : Pressure of the upstream tapping port [bar gauge]

$P_2$  : Pressure of the downstream tapping port [bar gauge]:  $P_2 = P_1 - \Delta P$

$Q$  : Flow rate [dm<sup>3</sup>/s standard condition]

$P_a$  : Atmospheric pressure [bar absolute]

$T_1$  : Upstream absolute temperature [K]

Test conditions are  $P_1 + P_a = 6.5 \pm 0.2$  bar absolute,  $T_1 = 297 \pm 5$ K, 0.07 bar  $\Delta P$  0.14 bar.

This is the same concept as effective area  $A$  which ISO 6358 stipulates as being applicable only when the pressure drop is smaller than the upstream pressure and the compression of air does not become a problem.

### 3. Process fluid control equipment

#### (1) Conformed standard

**IEC60534-2-3: 1997: Industrial process control valves. Part 2: Flow capacity, Section Three-Test procedures**

**JIS B 2005: 1995: Test method for the flow coefficient of a valve**

**Equipment standards: JIS B 8471: Solenoid valve for water**

**JIS B 8472: Solenoid valve for steam**

**JIS B 8473: Solenoid valve for fuel oil**

#### (2) Definition of flow characteristics

**$Av$  factor:** Value of the clean water flow rate represented by m<sup>3</sup>/s which runs through a valve (equipment for test) when the pressure difference is 1 Pa. It is calculated using the following formula.

$$Av = Q \sqrt{\frac{\rho}{\Delta P}} \quad (8)$$

**$Av$  :** Flow coefficient [m<sup>2</sup>]

**$Q$  :** Flow rate [m<sup>3</sup>/s]

**$\Delta P$  :** Pressure difference [Pa]

**$\rho$  :** Density of fluid [kg/m<sup>3</sup>]

#### (3) Formula of flow rate

It is described by the practical units. Also, the flow characteristics are shown in Graph (2).

In the case of liquid:

$$Q = 1.9 \times 10^6 Av \sqrt{\frac{\Delta P}{G}} \quad (9)$$

**$Q$  :** Flow rate [L/min]

**$Av$  :** Flow coefficient [m<sup>2</sup>]

**$\Delta P$  :** Pressure difference [MPa]

**$G$  :** Specific gravity [water = 1]

In the case of saturated steam:

$$Q = 8.3 \times 10^6 Av \sqrt{\Delta P (P_2 + 0.1)} \quad (10)$$

**$Q$  :** Flow rate [kg/h]

**$Av$  :** Flow coefficient [m<sup>2</sup>]

**$\Delta P$  :** Pressure difference [MPa]

**$P_1$  :** Upstream pressure [MPa]:  $\Delta P = P_1 - P_2$

**$P_2$  :** Downstream pressure [MPa]

VXK

VXD

VXZ

VXS

VXE

VXP

VXR

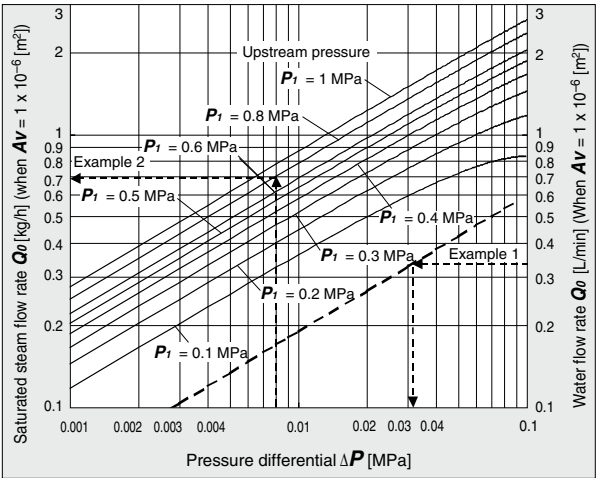

VXH

VXF2

VX3

VXA

Conversion of flow coefficient:  
**Av** =  $28 \times 10^{-6}$  **Kv** =  $24 \times 10^{-6}$  **Cv** .....(11)  
Here,  
**Kv** factor: Value of the clean water flow rate represented by m<sup>3</sup>/h which runs through a valve at 5 to 40°C, when the pressure difference is 1 bar.  
**Cv** factor (Reference values): Value of the clean water flow rate represented by US gal/min which runs through a valve at 60°F, when the pressure difference is 1 lb/in<sup>2</sup> (psi).  
Value is different from **Kv** and **Cv** factors for pneumatic purpose due to different test method.

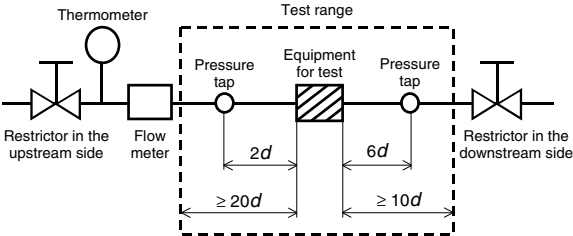

**Graph (2) Flow characteristics**

Example 1)  
Obtain the pressure difference when water 15 [L/min] runs through a solenoid valve with an **Av** =  $45 \times 10^{-6}$  [m<sup>2</sup>].  
Since  $Q_0 = 15/45 = 0.33$  [L/min], according to Graph (2), if reading  $\Delta P$  when  $Q_0$  is 0.33, it will be 0.031 [MPa].

Example 2)  
Obtain the saturated steam flow rate when  $P_t = 0.8$  [MPa],  $\Delta P = 0.008$  [MPa] with a solenoid valve with an **Av** =  $1.5 \times 10^{-6}$  [m<sup>2</sup>].  
According to Graph (2), if reading  $Q_0$  when  $P_t$  is 0.8 and  $\Delta P$  is 0.008, it is 0.7 [kg/h]. Hence, the flow rate  $Q = 0.7 \times 1.5 = 1.05$  [kg/h].

- (4) Test method
- Attach a test equipment with the test circuit shown in Fig. (3). Next, pour water at 5 to 40°C, then measure the flow rate with a pressure difference of 0.075 MPa. However, the pressure difference needs to be set with a large enough difference so that the Reynolds number does not go below a range of  $4 \times 10^4$ .  
By substituting the measurement results for formula (8) to figure out **Av**.

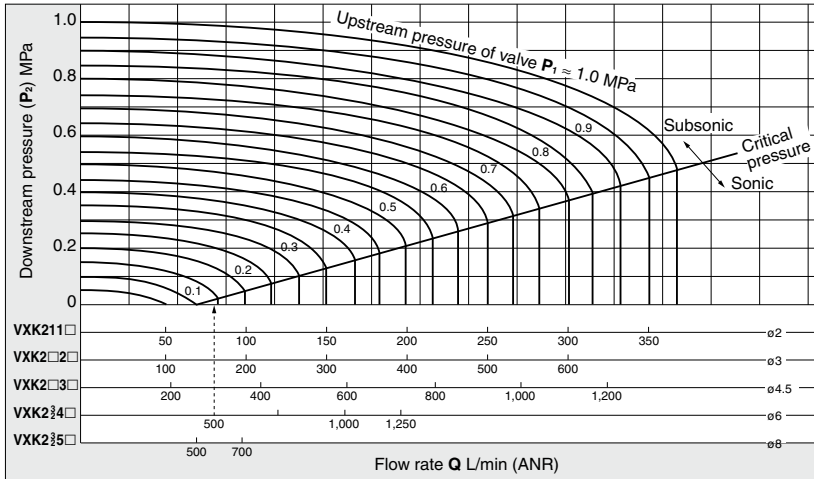

**Fig. (3) Test circuit based on IEC60534-2-3, JIS B 2005**

# Series VXK21/22/23

## Flow Characteristics

(Note) Use this graph as a guide. In the case of obtaining an accurate flow rate, refer to pages 90 to 94.

### Air

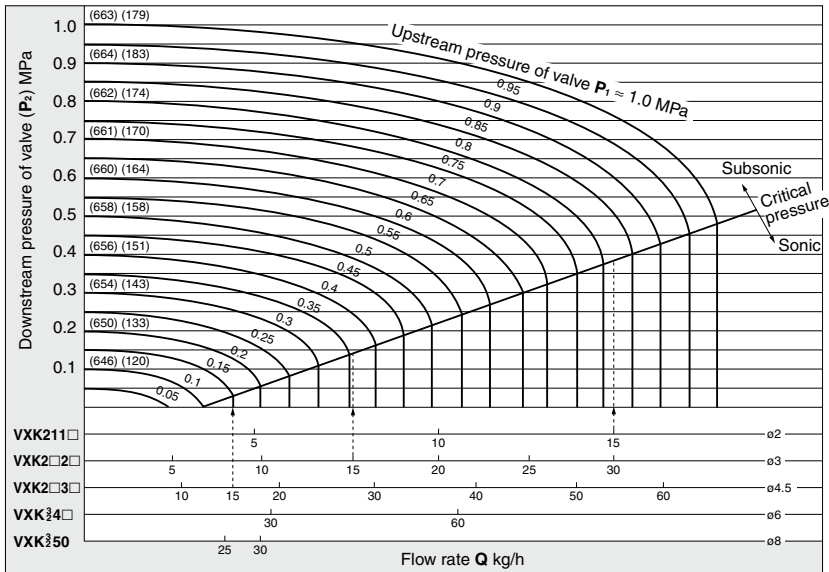

### How to read the graph

The sonic range pressure to generate a flow rate of 500 L/min (ANR) is

$P_1 = 0.14$  MPa for a ø6 orifice (VXK2□4□) and

$P_1 = 0.3$  MPa for a ø4.5 orifice (VXK2□3□).

### Saturated Steam

( ) : Saturated steam holding heat (kcal/kg) ( ) : Saturation temperature (°C)

### How to read the graph

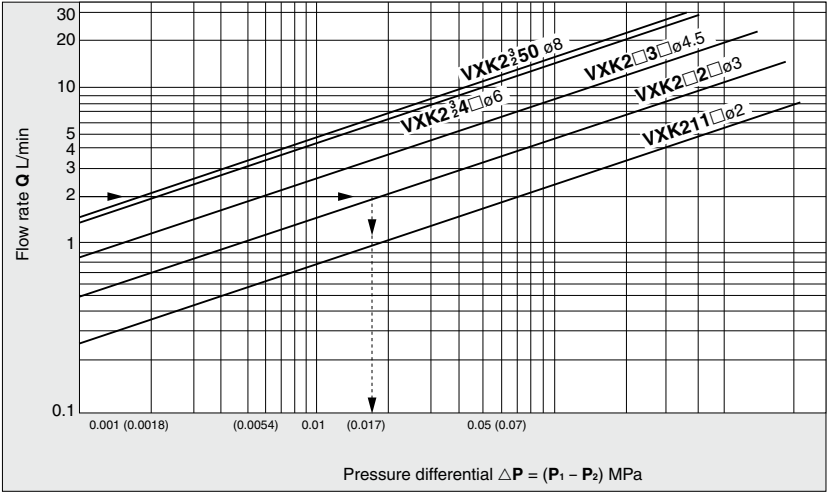

The sonic range pressure to generate a flow rate of 15 kg/h is

$P_1 = 0.15$  MPa for ø4.5 orifice (VXK2□3□S),  $P_1 = 0.37$  MPa for ø3 orifice (VXK2□2□S), and

$P_1 = 0.82$  MPa for ø2 orifice (VXK211□S). The holding heat slightly differs depending on the pressure  $P_1$ , but at 15 kg/h it is approx. 9700 kcal/h.

# Series VVK21/22/23

## Water

### How to read the graph

When a water flow of 2 L/min is generated,  $\Delta P = 0.017$  MPa for a valve with  $\phi 3$  orifice (VVK212□, 222□, 232□).

# Series VXK21/22/23

## Glossary of Terms

### Pressure Terminology

#### 1. Maximum operating pressure differential

The maximum pressure differential (the difference between the inlet and outlet pressure) which is allowed for operation. When the outlet pressure is 0 MPa, this becomes the maximum operating pressure.

#### 2. Minimum operating pressure differential

The minimum pressure differential (the difference between the inlet pressure and outlet pressure) required to keep the main valve stably operating.

#### 3. Maximum system pressure

The maximum pressure that can be applied inside the pipelines (line pressure).

(The pressure differential of the solenoid valve portion must be less than the maximum operating pressure differential.)

#### 4. Proof pressure

The pressure in which the valve must be withstood without a drop in performance after holding for one minute under prescribed pressure and returning to the operating pressure range. (value under the prescribed conditions)

#### 5. 100 mesh

The number of meshes over a length of 25.4 mm (1 inch).

### Electrical Terminology

#### 1. Apparent power (VA)

Volt-ampere is the product of voltage (V) and current (A).

Power consumption (W): For AC,  $W = V \cdot A \cdot \cos\theta$ . For DC,  $W = V \cdot A$ .

(Note)  $\cos\theta$  shows power factor.  $\cos\theta = 0.6$

#### 2. Surge voltage

A high voltage which is momentarily generated by shutting off the power in the shut-off area.

#### 3. Enclosure

A degree of protection defined in the "JIS C 0920: Waterproof test of electric machinery/appliance and the degree of protection against the intrusion of solid foreign objects".

Verify the degree of protection for each product.

#### ● First Characteristics:

##### Degrees of protection against solid foreign objects

0	Non-protected
1	Protected against solid foreign objects of 50 mm ø and greater
2	Protected against solid foreign objects of 12 mm ø and greater
3	Protected against solid foreign objects of 2.5 mm ø and greater
4	Protected against solid foreign objects of 1.0 mm ø and greater
5	Dust-protected
6	Dusttight

#### ● Second Characteristics:

##### Degrees of protection against water

0	Non-protected	—
1	Protected against vertically falling water drops	Dripproof type 1
2	Protected against vertically falling water drops when enclosure tilted up to 15°	Dripproof type 2
3	Protected against rainfall when enclosure tilted up to 60°	Rainproof type
4	Protected against splashing water	Splashproof type
5	Protected against water jets	Low jetproof type
6	Protected against powerful water jets	Strong jetproof type
7	Protected against the effects of temporary immersion in water	Immersible type
8	Protected against the effects of continuous immersion in water	Submersible type

Example) IP65: Dusttight, Low jetproof type

"Low jetproof type" means that no water intrudes inside an equipment that could hinder from operating normally by means of applying water for 3 minutes in the prescribed manner. Take appropriate protection measures, since a device is not usable in an environment where a droplet of water is splashed constantly.

### Others

#### 1. Material

NBR: Nitrile rubber

FKM: Fluororubber

EPDM: Ethylene propylene rubber

PTFE: Polytetrafluoroethylene resin

#### 2. Oil-free treatment

The degreasing and washing of wetted parts.

#### 3. Symbol

In the symbol (□□□□□□) Port 1 (IN) and Port 2 (OUT) are shown in a blocked condition (□), but it is not possible to use the valve in cases of reverse pressure, where the Port 2 pressure is higher than the Port 1 pressure.

## Series VXX Specific Product Precautions 1

Be sure to read before handling.

Refer to front matter 41 for Safety Instructions, pages 17 to 19 for 2 Port Solenoid Valves for Fluid Control Precautions.

### Replacement of Strainer

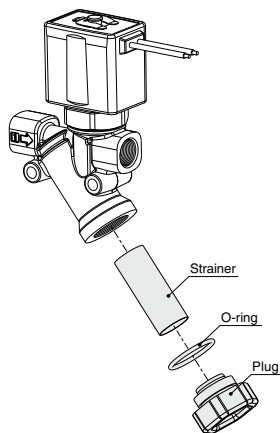

#### Warning

1. The valve will reach high temperatures from high temperature fluids such as steam. Confirm that the valve has cooled sufficiently before performing works.

If touched inadvertently, there is a danger of being burned.

2. Shut off the fluid supply and release the fluid pressure in the system.
3. Shut off the power supply.

- 1) Turn and remove the plug (width across flats of 27 mm).
- 2) Remove the strainer, and clean or replace it.
- 3) Mount the O-ring on the plug and insert the strainer to the end of the plug.
- 4) Screw the plug into the body.  
(Recommended tightening torque: 23 to 27 N·m)

# Series VXX

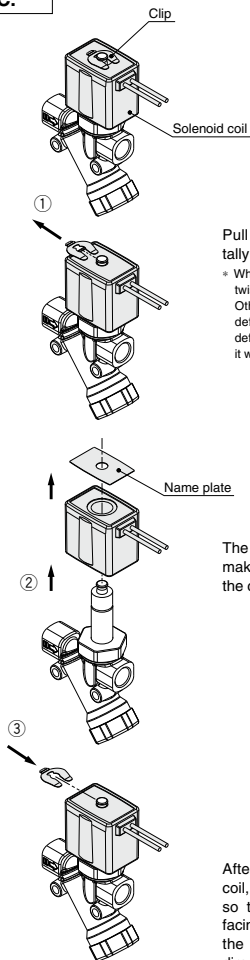

## Specific Product Precautions 2

Be sure to read before handling.

Refer to front matter 41 for Safety Instructions, pages 17 to 19 for 2 Port Solenoid Valves for Fluid Control Precautions.

### Replacement of Solenoid Coil

N.C.

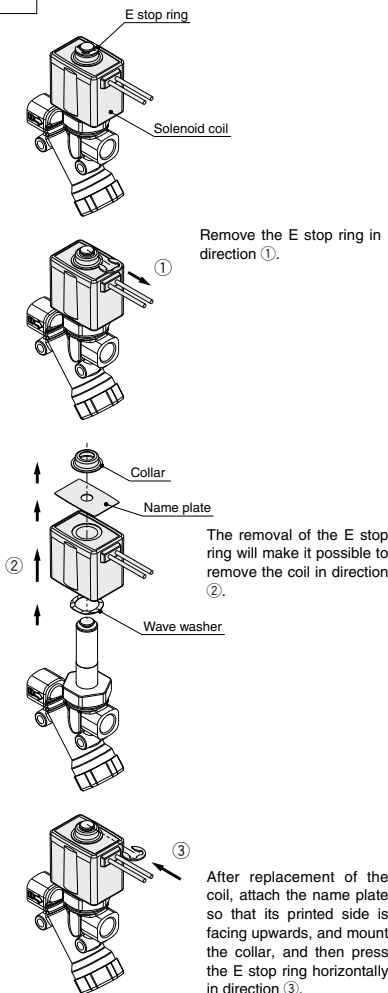

Pull out the clip horizontally in direction ①.

\* When doing this, do not apply twisting or torsion to the clip. Otherwise, the clip may be deformed. If the clip is deformed by mistake, replace it with a new one.

The removal of the clip will make it possible to remove the coil in direction ②.

After replacement of the coil, attach the name plate so that its printed side is facing upwards, and press the clip horizontally in direction ③.

N.O.

Remove the E stop ring in direction ①.

The removal of the E stop ring will make it possible to remove the coil in direction ②.

After replacement of the coil, attach the name plate so that its printed side is facing upwards, and mount the collar, and then press the E stop ring horizontally in direction ③.

### ⚠ Warning

1. When replacing the solenoid coil, turn off the power supply.
2. Be careful for possible high temperature of the solenoid coil due to the fluid temperature and operating conditions.
3. Check the type of the solenoid coil (size, rated voltage, voltage specification, insulation specification).

\* Replacement of solenoid coil

- Cannot be changed between DC and AC.
- Can be changed between DC and AC (built-in full-wave rectifier type).
- Can be changed from DC to DC.
- Can be changed from AC to AC.
