

Electric Stopper Cylinder

* Excludes the lever detection switch

Designed in response to customers' requests for a motorized conveyor line

With 2 control types available depending on the application

Controller		Controllerless							
Action	Series	Size	Stroke [mm]	Mounting type	Built-in magnet for auto switch	Rod end shape			
						Chamfered	Roller	Lever	
Controller Step motor	LEBQ-X1	32	20	Through-hole Screw	—	●	●	●	
		50	30		—	●	●	●	
Controllerless DC motor	LEBQ-X31	40	20	Through-hole Screw	●	—	—	●	
		50	30		●	—	—	●	
	LEBH-X3	63	30	Flange	●	—	—	●	
		80	40		●	—	—	●	

Max. weight of transferred object [kg]

* Friction coefficient $\mu = 0.1$

Controller Step motor LEBQ-X1	Size 32	25
	Size 50	130
Controllerless DC motor LEBQ-X31	Size 40	70
	Size 50	400
	Size 63	520
	Size 80	800

Ensured stopper cylinder mounting interchangeability with equivalent stopper performance*1

Electric Stopper Cylinder		Stopper Cylinder	
Series	Size	Series	Size

			80

*1 For details, refer to the Web Catalog of each series.

Easy replacement of shock absorbers

Replaceable just by loosening the set screw

* This picture shows the LEBH-X3.

LEB □ Series

22-E787

Controllerless Type LEBQ40-X31, LEBH50/63/80-X3

Controllable with only an ON/OFF signal

- Easy startup/Reduced wiring work
- No need of controller installation space

Size: 40

Sizes: 50, 63, 80

Power Consumption

No power consumption during rising operations and while holding the raised end

	Holding raised-end ①	Start descending ②	Holding lowered-end ③	Start rising ④
Power consumption [W]	Zero	48 W	4.8 W	Zero
Power supply	OFF	ON	ON	OFF
Motor	OFF	ON	OFF	OFF
Solenoid	OFF	ON	ON	OFF

Operation

When power is OFF (de-energized), raised-end is held with spring force only (1). When power is ON (energized), the roller starts to descend powered by the motor and by the coil (2). After the roller reaches the retracted end, the motor stops automatically (Motor OFF) and it is held by the solenoid force only (3). When power is OFF, it starts to rise with spring force (4).

Maximum speed of transferred object

Series	Speed [m/min]*1
LEBQ40-X31	30
LEBH50/63/80-X3	40

*1 Friction coefficient $\mu = 0.1$

Auto switch compatible * Only for controllerless type

For checking operating position

Applicable to the D-M9□, D-M9□W (2-color indicator)

* The auto switches should be ordered separately.

For details, refer to the **Web Catalog** of each series.

2-Color Indicator Solid State Auto Switch

Accurate setting of the mounting position can be performed without mistakes.

A green light lights up at the optimum operating range.

Controller Type **LEBQ32/50-X1**

- Various communication protocols supported
- The current position is held when the power supply is turned OFF.
- Compact: Reduced height due to horizontal motor mounting

LEBQ□-X1 Series Model Selection

Operating Range

Example 1

Transfer speed: 15 m/min
Weight of transferred object: 40 kg
Roller type

<Selection Procedure>

From graph ①, determine the intersection of a transfer speed of 15 m/min on the horizontal axis and a transfer weight of 40 kg on the vertical axis, and select the **LEBQ□50□-30□□-X1**, which is within the cylinder operating area.

Graph ①
Roller/Round Bar/Chamfered

Example 2

Transfer speed: 15 m/min
Weight of transferred object: 60 kg
Friction coefficient $\mu = 0.1$
Lever type

<Selection Procedure>

From graph ②, determine the intersection of a transfer speed of 15 m/min on the horizontal axis and a transfer weight of 60 kg on the vertical axis, and select the **LEBQ□50□-30□□-X1**, which is within the cylinder operating area.

Graph ②
Lever type (with shock absorber)

- * The graph ② shows the case of a Lever Type with a friction coefficient $\mu = 0.1$ and at normal temperatures (20 to 25°C).
- * When selecting cylinders, confirm the Specific Product Precautions as well.

	Rated voltage [V]	24 VDC ±10%
	Power consumption [W]	48
	Lower end standby power [W]*2	4.8

*1 This actuator holds the raised-end when de-energized. (Spring return)

*2 This actuator holds the lowered-end with solenoid only when de-energized.

*3 This actuator can be used in vertical directions only.

* The motor will be turned OFF automatically by the internal circuit board after the actuator stops.
A dedicated controller or driver is not necessary.

* The applicable auto switch is the D-M9□ series.
(Please refer to the **Web Catalog** for details.)

* A short break function is included with this cylinder for protection.

Short break function: a function that slows the driving motor down if the rotation speed is over the designated value.

* Beware of inrush current of approx. 5 A when the power supply is turned on.

Choose the equipment used when the power supply is turned such as relay considering the inrush current.

Lever Detection Switch (Proximity Switch)/E2E-X2D1-N

Proximity Switch Specifications/ Manufactured by OMRON Corporation

Model	E2E-X2D1-N
Output type	Normally open
Power supply voltage (Operating voltage range)	12 to 24 VDC (10 to 30 VDC) Ripple 10% or less (P-P)
Current consumption (Leakage current)	0.8 mA or less
Response frequency	1.5 kHz
Control output (Chest)	3 to 100 mA
Indicator LED	Operation indication (Red LED), Set operation indication (Green LED)
Ambient temperature	-25 to 70°C (No freezing)
Operating ambient humidity	35 to 95%RH
Residual voltage *1	3 V or less
Withstand voltage *2	1000 VAC
Vibration	Endurance 10 to 55 Hz, Double amplitude 1.5 mm X, Y, Z direction each 2 h
Impact	Endurance 500 m/s ² (approx. 50 G), X, Y, Z direction each 10 times
Enclosure	IEC standards IP67 (Immersion proof and oil proof by JEM standards IP67G)

*1 At load current 100 mA and cord length of 2 m

*2 Between case and whole live part

<Mounting position>

Confirm that the proximity switch indicator LED turns to green when the lever is pushed towards the proximity switch side. (Figure 1)

Confirm that the proximity switch indicator LED turns to green when the lever is pushed towards the opposite side from the proximity switch. (Figure 2)

Then, rotate the lever by 90° to confirm that the indicator LED of the proximity switch (red, green) does not turn on.

Fix the cylinder with screws included as accessories after confirming that there is no interference between the lever and the proximity switch.

Dimensions

* Vinyl insulation round cord

ø3.5 (18/ø0.12) 2-core, standard 2 m, cord extension (individual metal piping) max. 200 m

Output Circuit

2-Wire

Auto Switch Mounting

Auto switch proper mounting position (Detection at Stroke End)

Auto switch proper mounting position [mm]

Model	Auto switch model			
	D-M9□		D-M9□V	
	A	B	A	B
LEBH50	16.1	40.9	16.1	42.9
LEBH63	15.6	45.4	15.6	47.4
LEBH80	27.1	51.2	27.1	53.2

* Adjust the auto switch after confirming the operating conditions in the actual setting

Mounting of auto switch

• When tightening an auto switch mounting screw, use a watchmaker's screwdriver with a grip diameter of 5 to 6 mm.

Tightening Torque for Auto Switch Mounting Screw [N·m]

Auto switch model	Tightening torque
D-M9□ D-M9□W D-M9□V D-M9□WV	0.05 to 0.15

Operating Range [N·m]

Auto switch model	Model		
	LEBH50	LEBH63	LEBH80
D-M9□ D-M9□W D-M9□V D-M9□WV	6	6.5	7

* Since the operating range is provided as a guideline including hysteresis, it cannot be guaranteed. (assuming approximately ±30% dispersion)
It may vary substantially depending on an ambient environment.

LEB□ Series

Specific Product Precautions 1

Be sure to read this before handling the products. For safety instructions, electric actuator precautions, and auto switch precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <https://www.smcworld.com>

Design / Selection

⚠ Caution

1. Do not allow collision with the transferred object while the lever is up.

For the lever with a built-in shock absorber, do not allow collision with the next transferred object while the lever is up. Otherwise, all energy will be applied to the cylinder body.

2. When stopping a load directly connected to the cylinder at an intermediate position:

Apply the operating range in the catalog only in these cases where the stopper cylinder is used to stop pallets on a conveyor belt. When using the electric stopper cylinder to stop loads directly connected to a cylinder or some other equipment, a lateral load is applied as the cylinder thrust. Please consult SMC in such cases.

3. After the transferred object is stopped by the electric stopper, lateral load (conveyor load) must not be applied during the rod retraction operation.

Mounting

⚠ Caution

1. Do not apply rotational torque to the actuator rod.

To prevent rotational torque from being applied to the actuator rod, make sure that the lever contact surface is parallel to the transferred object contact surface.

Mounting

⚠ Caution

2. Recommended mounting plate and drilling

<LEBQ Series>

When mounting the lever type with a built-in shock absorber from the lever direction, refer to the recommended hole sizes in the table below and machine the mounting holes accordingly.

When mounting the stopper cylinder by inserting it into the mounting holes from the lever direction as shown in the figure below, note that the outer diameter (O.D.) of the lever part is larger than the diameter of the rod cover boss part.

(Figure 1)

Table 1 Recommended hole size

Model	Rod cover boss outer diameter	Mounting base recommended hole size
	ϕT	ϕD
LEBQ32	36	38
LEBQ40	44	48
LEBQ50	56	57

<LEBH Series>

Secure the motor runoff space, and tighten the mounting screws within the specified torque range.

Tightening the screws with a higher torque than recommended may result in a malfunction, while tightening with a lower torque can result in the displacement of the mounting position.

LEBH50

LEBH63

LEBH80

Model	Screw size	Max. tightening torque [N·m]
LEBH50	M8	12.5
LEBH63	M10	24.5
LEBH80	M12	42.0

LEB□ Series

Specific Product Precautions 2

Be sure to read this before handling the products. For safety instructions, electric actuator precautions, and auto switch precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <https://www.smcworld.com>

Mounting

⚠ Caution

3. How to change the direction of the piston rod

<LEBQ Series>

- 1) Loosen the 2 hexagon socket head set screws (M3) for mounting the non-rotating guide in the rod cover part.
- 2) Reposition the piston rod into the desired position.
 - * To prevent rotational torque from being applied to the piston rod, make sure that the cylinder contact surface is parallel to the pallet contact surface.

- 3) Tighten the 2 hexagon socket head set screws to secure the non-rotating guide. When tightening, apply screw-locking adhesive to the hexagon socket head set screws. Tightening torque: 0.63 N·m

- * The non-rotating guide is secured with 2 hexagon socket head set screws.

If 1 of the screws is overtightened, the non-rotating guide may come into contact with the piston rod, resulting in a malfunction. Therefore, tighten the hexagon socket head set screws alternately to prevent such contact.

- 4) Make sure that the cylinder operates smoothly.

<LEBH Series>

Apply a wrench, etc., to the width across flats of the guide rod end to remove the guide rod. The lever part is able to rotate freely, and the direction can be changed in 90° increments (4 directions).

When mounting the guide rod, apply screw-locking adhesive to guide rod threaded part and tighten it.

- * Guide rod (M6) tightening torque: 5.2 [N·m]

Handling

⚠ Caution

1. Do not let water, cutting oil or dust splash on the equipment.

It can cause oil leakage and malfunction of the shock absorber

2. How to adjust the lever type (with shock absorber adjustment) (LEBQ series)

The lever type (with shock absorber adjustment) can be adjusted via the shock absorber adjustment bolt in order to perform stops according to the conveyance conditions. Follow the adjustment procedure below.

Procedure

- 1) Loosen the set screw (M4) on the side of the lever.
- 2) Adjust the adjustment bolt according to the energy of the transferred object.

(When the adjustment bolt is tightened, the shock absorber's stroke increases (absorbed energy increases), and when it is loosened, the stroke decreases (absorbed energy decreases).)

- 3) After adjusting the adjustment bolt, secure it with the set screw (M4) loosened in 1).

Tightening torque M4: 1.5 N·m

3. Shock absorber capacity variable adjustment method (LEBH series)

To stop the work gently, loosen the set screw (M4) on the stopper and turn the adjustment dial according to the energy value of the transferred object to select the optimum absorption position (retardation value).

For the adjustment dial, rotation to the right decreases the resistance value, and rotation to the left increases the resistance value. After adjustment, securely tighten the set screw to secure the adjustment dial in place. When reassembling, apply screw-locking adhesive to the threaded part and tighten it.

- * Set screw (M4) tightening torque: 1.5 [N·m]

LEB□ Series

Specific Product Precautions 3

Be sure to read this before handling the products. For safety instructions, electric actuator precautions, and auto switch precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <https://www.smcworld.com>

Handling

⚠ Caution

4. When adjusting the shock absorber resistive force value, first try the maximum value and then proceed to smaller values (LEBH series)

If the energy value of the transferred object is higher than the resistance value of the shock absorber, this will stress the lever part, resulting in damage. At the time of factory shipment, the shock absorber resistance is set to the max. value.

5. For a cylinder with lock mechanism, do not apply an external force from the opposite side when the lever is locked.

Lower this actuator before adjusting the conveyor or moving a transferred object.

6. For a cylinder with lock mechanism, do not collide the transferred object and the roller when the lever is locked.

If the pallet collides with the roller in the locked state, it may cause lever malfunction. (The lever is released when this actuator is fully retracted.)

7. For the lever type with a lock mechanism rod end shape, do not remove the grease that has been applied to pin B and the bracket.

When using the cylinder continuously with no grease applied, the lock and unlock may not operate correctly due to unusual wear of the lock pin. Check the grease application state periodically and apply the grease when necessary.

* Grease pack part no.: GR-S-010 (10g)

Similarly, be careful not to remove the grease from the piston rod end of the built-in shock absorber. Check the grease application state periodically.

<LEBQ Series>

<LEBH Series>

Maintenance

⚠ Caution

1. The stopping condition of the transferred object may vary due to changes in ambient temperature or changes in the shock absorber resistance over time.

2. How to replace the shock absorber

<LEBQ Series>

1) Loosen the hexagon socket set screw (M3) on the piston rod part.

2) With the lever tilted as shown, pull out the shock absorber to remove it, and replace it with a new shock absorber.

3) Tighten the hexagon socket head set screw to the piston rod part. After the hexagon socket head set screw stops, turn it a further 1/4 rotation. Overtightening the hexagon socket head set screw may damage it, and the shock absorber may also malfunction as a result.

Tightening torque: 0.29 N·m

4) After replacement, apply grease to the shock absorber piston rod end.

LEB□ Series

Specific Product Precautions 4

Be sure to read this before handling the products. For safety instructions, electric actuator precautions, and auto switch precautions, refer to the “Handling Precautions for SMC Products” and the “Operation Manual” on the SMC website: <https://www.smcworld.com>

Maintenance

⚠ Caution

<LEBH Series>

Loosen the set screw (M4) for shock absorber mounting provided in the lever holder, tilt the lever 90°, and pull out the shock absorber.

After replacing the shock absorber, tighten the set screw firmly and apply grease to the shock absorber rod end surface.

* Set screw (M4) tightening torque: 1.5 [N·m]

 **Safety Instructions** | Be sure to read the "Handling Precautions for SMC Products" (M-E03-3) and "Operation Manual" before use.
