

# Compressed Air Cleaning Filter Series

## AM□/AFF Series

For Water Droplet, Solid/Oil Separation and Deodorization

\* Refer to each series.

### Modular connection, Space-saving design, Labor-saving in piping!

(AMGE□, AFF□□, AM□□, AM□□□)  
(AMH□□, AME□□, AMF□□)

Uses the same spacer as the F.R.L. combination AC series.

Possible to make a modular connection with products such as AR series regulator.

#### Modular connection example

Note) Spacer with bracket cannot be mounted.  
Use the attached bracket.

AMH + AME

AMH + AME + AMF

\* The C type is only suitable for modular connection.

### Options added

(AMGE□, AFF□□, AM□□, AM□□□)  
(AMH□□, AME□□, AMF□□)

Differential pressure switch

#### Addition: 5 types

1.6 MPa specifications

FKM specifications

With differential pressure switch (125 VAC, 30 VDC)

With differential pressure switch (30 VDC)

White vaseline specifications

### Compact, Lightweight

Height and weight reduced by up to 40%

# Water Separator

# AMG Series

**Can remove water droplets in compressed air. Use this product in cases where "water must be avoided, but not so dry as when an air dryer is used".**

Through the adoption of a dedicated element and the ample housing interior space, a 99%\* water removal rate\*\* has been achieved.

## Caution

Water separator can remove water droplets, but it cannot remove moisture.

- \* Condition of inlet air
  - Pressure: 0.7 MPa
  - Temperature: 25°C
  - Relative humidity: 100%
  - Liquid water content (Water droplet content): 15 g/m<sup>3</sup> (ANR)
  - Compressed air flow: Rated flow of each model

\*\* Water removal rate (%) =  $\frac{\text{Removed water (Water droplet) (g)}}{\text{Inflowed water (Water droplet) (g)}} \times 100$

Modular connection is possible with AMG150C to 550C.  
(For details, refer to page 372.)

AMG150C to 550C

AMG650/850

## Options

### Symbol F: Rubber material: FKM

FKM is used for the parts such as O-ring and gasket.

### Symbol H: For medium air pressure (1.6 MPa)

Can be used up to 1.6 MPa at maximum.

### Symbol J: Drain guide 1/4 female threaded

Pipe threaded connection for the drain exhaust port

1/4 female threaded

### Symbol R: IN-OUT reversal direction

Flow direction: Right to left  
(Flow direction of the standard: Left to right)

### Symbol V: White vaseline

The body/housing is degreased, and the grease used for the parts requiring lubrication has been changed to white vaseline.

**AMG450C**

**AMG850**

**AMG250C**

**AMG550C**

**AMG350C**

**AMG650**

## Construction

### AMG150C to 550C, AMG650

### AMG850

### Component Parts

No.	Description	Material	Note
1	Body	Aluminum alloy	Inner/outer surface coating
2	Housing (Case)	Aluminum alloy	
3	Sight glass	Tempered glass	—

Note) The figure shows the drain cock specification.

Note) Sight glass is indicated in the figure for easy understanding of component parts. However, it differs from the actual construction. Refer to dimensions on pages 318 to 320 for details.

### Replacement Parts

No.	Description	Material	Applicable model	Model						
				AMG150C	AMG250C	AMG350C	AMG450C	AMG550C	AMG650	AMG850
4	Element assembly	Resin, others	Except option F	AMG-EL150	AMG-EL250	AMG-EL350	AMG-EL450	AMG-EL550	AMG-EL650	AMG-EL850
			For option F	AMG-EL150-F	AMG-EL250-F	AMG-EL350-F	AMG-EL450-F	AMG-EL550-F	—	—

- Element assembly: With gasket (1 pc.) and O-ring (1 pc.)
- Refer to page 386 for replacement of auto drain.

## Maximum Flow Capacity Line

## Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the max. flow capacity into consideration.

(Example) Inlet pressure: 0.6 MPa

Max. flow capacity: 5 m<sup>3</sup>/min (ANR)

1. Obtain the intersecting point A of inlet pressure and max. flow capacity in the graph.
2. The AMG650 is obtained when the max. flow capacity line is above the intersecting point A in the graph.

Note) Make sure to select a model that has the max. flow capacity line above the obtained intersecting point. With a model that has the max. flow capacity line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

# AMG Series

## Dimensions

### AMG150C to 550C

Note) The figure shows the drain cock specification.

### Auto drain

C: With auto drain (N.C.)

D: With auto drain (N.O.)

Combination of D: With auto drain (N.O.)  
and H: For medium air pressure

Note) 23 for AMG250C

### Option

J: Drain guide 1/4 female threaded

Anchor bolt (3 pcs. each)	A1-2S			

## Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the max. flow capacity into consideration.  
(Example) Inlet pressure: 0.6 MPa

Max. flow capacity: 5 m<sup>3</sup>/min (ANF)

- Obtain the intersecting point A of inlet pressure and max. flow capacity in the graph.
- The AFF37B is obtained when the max. flow capacity line is above the intersecting point A in the graph.

Note) Make sure to select a model that has the max. flow capacity line above the obtained intersecting point. With a model that has the max. flow capacity line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

## Maximum Flow Capacity Line

## How to Order

### AFF2C to 22C

### Made to Order

Symbols are only added at the end for Made to Order. Refer to page 378 and later for the contents of Made to Order, How to Order, and the applicable models.

### Option \*3

- Multiple options can be selected.
- Refer to the table on the lower left for the available combinations.
- Indicate symbols in alphabetical order.

Symbol	Description
Nil	—
F	Rubber material: FKM
H	For medium air pressure (1.6 MPa)
J	Drain guide 1/4 female threaded *5
R	IN-OUT reversal direction
S	With differential pressure switch (125 VAC, 30 VDC) *6, (Note)
U	With differential pressure switch (30 VDC) *6
T	With element service indicator
V	White vaseline

\*5 Without a valve function

\*6 Differential pressure switch is included, (but not assembled).

(Note) Select "U" if conformity to the EU directive is required.

### Auto Drain Specifications/Option Combinations

○: All types of auto drain specifications are available. (including drain guide, "J" specification)

△: N.C. auto drain ("C" specification) is not available.

▽: Both N.C. and N.O. auto drain ("C", "D" specification) is not available.

	Nil	F	H	R	S	U	T	V
Nil	○	○	△	○		Note		○
F	○	○	△	○				▽
H	○	▽	△	○				▽
R	△	○	△			Note		○
S								
U	Note			Note				
T								○
V	○	▽	▽	○				○

Note: Only one drain exhaust method can be selected.

□: Not available

### Auto drain \*2 \*3

Symbol	Description
Nil	Without auto drain (With drain cock *4)
C	N.C. (Normally closed) Drain port is closed when pressure is not applied.
D	N.O. (Normally open) Drain port is open when pressure is not applied.

\*2 Refer to page 371 for proper use of the auto drain. (Only one auto drain specification can be selected.)

\*3 Refer to the table on the left for the available combinations of the auto drain specifications and options.

\*4 When the option J is selected, the auto drain and drain cock are not available.

## Options

### Symbol F: Rubber material: FKM

FKM is used for the parts such as O-ring and gasket.

### Symbol H: For medium air pressure (1.6 MPa)

Can be used up to 1.6 MPa at maximum.

### Symbol J: Drain guide 1/4 female threaded

Pipe threaded connection for the drain exhaust port

1/4 female thread

### Symbol R: IN-OUT reversal direction

Flow direction: Right to left  
Air flow is changed to right to left. (Flow direction of the standard: Left to right)

### Symbol T: With element service indicator

Clogging of the element can be observed visually.

### Symbol S: With differential pressure switch (with indicator)

Clogging of the element can be observed visually or with an electrical signal.

\* The rated contact voltage is different from "U".

Max. contact capacity: 10 VA AC, 10 W DC  
Rated contact voltage (max. operating current): 125 V AC (0.08 A), 30 V DC (0.33 A)

### Symbol U: With differential pressure switch (with indicator)

Clogging of the element can be observed visually or with an electrical signal.

\* The rated contact voltage is different from "S".

Max. contact capacity: 10 W DC  
Rated contact voltage (max. operating current): 30 V DC (0.33 A)

### Symbol V: White vaseline

The body/housing is degreased, and the grease used for the parts requiring lubrication has been changed to white vaseline.

Note) Maximum flow capacity at 0.7 MPa.

Maximum flow capacity varies depending on the operating pressure.

Refer to "Flow Rate Characteristics" (page 332) and "Max. Flow Capacity Line" (page 333) below.

Note) Refer to "Made to Order" (page 382) for high flow type of AM850 or more.

## Specifications

Fluid	Compressed air
Max. operating pressure	1.0 MPa
Min. operating pressure*1	0.05 MPa
Proof pressure	1.5 MPa
Ambient and fluid temperature	5 to 60°C
Nominal filtration rating	0.3 $\mu\text{m}$ (Filtration efficiency: 99.9%)
Oil mist density at outlet	Max. 1 mg/m <sup>3</sup> (ANR) (=0.8 ppm)*2
Element replacement period	2 years or when pressure drop reached 0.1 MPa

\*1 With auto drain: 0.1 MPa (N.O. type) or 0.15 MPa (N.C. type)

\*2 When the inlet oil mist density is 30 mg/m<sup>3</sup> (ANR).

## Options

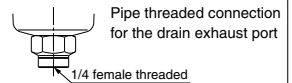

### Symbol F: Rubber material: FKM

FKM is used for the parts such as O-ring and gasket.

### Symbol H: For medium air pressure (1.6 MPa)

Can be used up to 1.6 MPa at maximum.

### Symbol J: Drain guide 1/4 female threaded

### Symbol R: IN-OUT reversal direction

Flow direction: Right to left  
(Flow direction of the standard: Left to right)

### Symbol T: With element service indicator

Clogging of the element can be observed visually.

### Symbol S: With differential pressure switch (with indicator)

Clogging of the element can be observed visually or with an electrical signal.

\* The rated contact voltage is different from "U".

Max. contact capacity: 10 VA AC, 10 W DC  
Rated contact voltage (max. operating current): 125 VAC (0.08 A), 30 VDC (0.33 A)

### Symbol U: With differential pressure switch (with indicator)

Clogging of the element can be observed visually or with an electrical signal.

\* The rated contact voltage is different from "S".

Max. contact capacity: 10 W DC  
Rated contact voltage (max. operating current): 30 VDC (0.33 A)

### Symbol V: White vaseline

The body/housing is degreased, and the grease used for the parts requiring lubrication has been changed to white vaseline.

- Element assembly: With gasket (1 pc.) and O-ring (1 pc.)
- Refer to page 386 for replacement of auto drain.

## Maximum Flow Capacity Line

## Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the maximum flow capacity into consideration.

(Example) Inlet pressure: 0.6 MPa

Maximum flow capacity: 5 m<sup>3</sup>/min (ANR)

1. Obtain the intersecting point A of inlet pressure and Maximum flow capacity in the graph.
2. The AM650 is obtained when the max. flow capacity line is above the intersecting point A in the graph.

Note) Make sure to select a model that has the max. flow capacity line above the obtained intersecting point. With a model that has the max. flow capacity line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

### AM850

### Auto drain

D: With auto drain (N.O.)

3/8 female threaded  
The same thread type is used for the IN and OUT.

### Option

T: With element service indicator

Note) The figure shows the drain cock specification.

# Micro Mist Separator

# AMD Series

\* The AMD850 only

Can separate and remove aerosol state oil mist in compressed air and remove particles such as carbon or dust of more than 0.01  $\mu\text{m}$ .

Use this product as a pre-filter for compressed air for precision instruments or clean room requiring higher clean air.

Modular connection is possible with AMD150C to 550C.  
(For details, refer to page 372.)

AMD150C to 550C

## Model

Model	AMD150C	AMD250C	AMD350C	AMD450C	AMD550C	AMD650	AMD850
Rated flow (L/min (ANR)) <sup>Note)</sup>	200	500	1000	2000	3700	6000	12000
Port size	1/8, 1/4	1/4, 3/8	3/8, 1/2	1/2, 3/4	3/4, 1	1, 1 1/2	1 1/2, 2
Weight (kg)	0.38	0.55	0.9	1.4	2.1	4.2	10.5

Note) Max. flow capacity at 0.7 MPa.

Max. flow capacity varies depending on the operating pressure.

Refer to "Flow Rate Characteristics" (page 340) and "Maximum Flow Capacity Line" (page 339).

## Model/Free Standing Type

Model	AMD900	AMD1000
Rated flow (L/min (ANR))	24000	40000
Port size	50(2B), 80(3B), 100(4B), JIS 10K FF flange	100(4B), 150(6B), JIS 10K FF flange
Weight (kg)	220	430

## Specifications

Fluid	Compressed air
Max. operating pressure	1.0 MPa <sup>Note 3)</sup>
Min. operating pressure <sup>Note 1)</sup>	0.05 MPa
Proof pressure	1.5 MPa
Ambient and fluid temperature	5 to 60°C
Filtration rating	0.01 $\mu\text{m}$ (Filtration efficiency: 99.9%)
Oil mist density at outlet	Max. 0.1 mg/m <sup>3</sup> (ANR) <sup>Note 2)</sup> (Before saturated with oil, less than 0.01 mg/m <sup>3</sup> (ANR) = 0.008 ppm)
Element replacement period	2 years (1 year for free standing type) or when pressure drop reached 0.1 MPa

Note 1) With auto drain: 0.1 MPa (N.O. type) or 0.15 MPa (N.C. type)

Note 2) When the inlet oil mist density is 30 mg/m<sup>3</sup> (ANR).

Note 3) 0.97 MPa for free standing type

## Accessory Part No.

Applicable model	AMD150C	AMD250C	AMD350C	AMD450C	AMD550C	AMD650	AMD850
Bracket assembly (with 2 mounting screws)	AM-BM101	AM-BM102	AM-BM103	AM-BM104	AM-BM105	BM56	BM57

## ⚠ Caution

Be sure to read this before handling the products.  
Refer to page 9 for safety instructions and pages 10 to 12 for air preparation equipment precautions.

Note: Only one drain exhaust method can be selected.  
 □ : Not available

\*5 Without a valve function  
 \*6 Differential pressure switch is included, (but not assembled).  
 Note) Select "U" if conformity to the EU directive is required.

### Auto drain \*2 \*3

Symbol	Description
Nil	Without auto drain (With drain cock *4)
C	N.C. (Normally closed) Drain port is closed when pressure is not applied.
D	N.O. (Normally open) Drain port is open when pressure is not applied.

\*2 Refer to page 371 for proper use of the auto drain. (Only one auto drain specification can be selected.)  
 \*3 Refer to the table on the left for the available combinations of the auto drain specifications and options.  
 \*4 When the option J is selected, the auto drain and drain cock are not available.

## Options

**Symbol F: Rubber material: FKM**

FKM is used for the parts such as O-ring and gasket.

**Symbol H: For medium air pressure (1.6 MPa)**

Can be used up to 1.6 MPa at maximum.

**Symbol J: Drain guide 1/4 female threaded**

Pipe threaded connection for the drain exhaust port

1/4 female threaded

**Symbol R: IN-OUT reversal direction**

Flow direction: Right to left  
 (Flow direction of the standard: Left to right)

**Symbol S: With differential pressure switch (with indicator)**

Clogging of the element can be observed visually or with an electrical signal.

**Symbol U: With differential pressure switch (with indicator)**

Clogging of the element can be observed visually or with an electrical signal.

**Symbol T: With element service indicator**

Clogging of the element can be observed visually.

Pressure drop 0.1 MPa

\* The rated contact voltage is different from "U".

Max. contact capacity: 10 VA AC, 10 W DC  
 Rated contact voltage (max. operating current): 125 V AC (0.08 A), 30 V DC (0.33 A)

\* The rated contact voltage is different from "S".

Max. contact capacity: 10 W DC  
 Rated contact voltage (max. operating current): 30 V DC (0.33 A)

**Symbol V: White vaseline**

The body/housing is degreased, and the grease used for the parts requiring lubrication has been changed to white vaseline.

## How to Order

### AMD650/850

#### • Made to Order

Symbols are only added at the end for Made to Order. Refer to page 378 and later for the contents of Made to Order, How to Order, and the applicable models.

#### • Option \*3

- Multiple options can be selected.
- Refer to the table below for the available combinations.
- Indicate symbols in alphabetical order.

Symbol	Description
Nil	—
J	Drain guide 1/4 female threaded *5
R	IN-OUT reversal direction
T	With element service indicator

\*5 Without a valve function

### Auto Drain Specifications/ Option Combinations

○: Available □: Not available

Auto drain specifications/Option	Auto drain specifications	Option				Applicable model	
		D	J	R	T	AMD650	AMD850
Auto drain specifications	N.O. auto drain	D	□	○	○	○	○
	Drain guide 1/4	J	○	○	○	○	○
Option	IN-OUT reversal direction	R	○	○	○	○	○
	With element service indicator	T	○	○	○	○	○

\*2 Refer to the table on the right for the available combinations of the auto drain specifications and options.

\*3 When the option J is selected, the auto drain and drain cock are not available.

\*4 Body size 850 is equipped with a ball valve (Rc 3/8). Mount a piping adapter IDF-AP609 (page 373) to the ball valve if NPT 3/8 female threaded is required.

### Free standing type AMD9□, 10□

#### • Port size

Symbol	Port size	Applicable size	
		AMD9□0	AMD10□0
20	50(2B)JIS 10K FF flange	●	—
30	80(3B)JIS 10K FF flange	●	—
40	100(4B)JIS 10K FF flange	—	●
60	150(6B)JIS 10K FF flange	—	●

\*6 Auto drain is N.O. (Normally open). Drain port is open when pressure is not applied.

## Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the max. flow capacity into consideration.

(Example) Inlet pressure: 0.6 MPa

Max. flow capacity: 5 m<sup>3</sup>/min (ANR)

- Obtain the intersecting point A of inlet pressure and max. flow capacity in the graph.
- The AMD650 is obtained when the max. flow capacity line is above the intersecting point A in the graph.

Note) Make sure to select a model that has the max. flow capacity line above the obtained intersecting point. With a model that has the max. flow capacity line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

## Maximum Flow Capacity Line

# AMD Series

**Flow Rate Characteristics (Representative values)**/Select the model under the max. flow capacity line. ( — Element oil saturation - - - - Initial condition)

Note) Compressed air over max. flow line in the table below may not meet the specifications of the product.

# Micro Mist Separator with Pre-filter

# AMH Series

\* The AMH850 only

Can separate and remove aerosol state oil mist in compressed air and remove particles such as carbon or dust of more than 0.01  $\mu\text{m}$ .

Use this product as a pre-filter for compressed air for precision instruments or clean room requiring higher clean air.

The AM series and AMD series have been integrated to achieve a reduction in installation space and in piping labor.

Modular connection is possible with AMH150C to 550C.  
(For details, refer to page 372.)

Port size	1/8, 1/4	1/4, 3/8	3/8, 1/2	1/2, 3/4	3/4, 1	1, 1 1/2	1 1/2, 2
Weight (kg)	0.38	0.55	0.9	1.4	2.1	4.2	10.5

Note) Max. flow capacity at 0.7 MPa.

Max. flow capacity varies depending on the operating pressure.

Refer to "Flow Rate Characteristics" (page 350) and "Maximum Flow Capacity Line" below.

## Specifications

Fluid	Compressed air
Max. operating pressure	1.0 MPa
Min. operating pressure <sup>*1)</sup>	0.05 MPa
Proof pressure	1.5 MPa
Ambient and fluid temperature	5 to 60°C
Nominal filtration density	0.01 $\mu\text{m}$ (Filtration efficiency: 99.9%)
Oil mist density at outlet	Max. 0.1 $\text{mg}/\text{m}^3$ (ANR) <sup>*2)</sup> (Before saturated with oil, less than 0.01 $\text{mg}/\text{m}^3$ (ANR) = 0.008 ppm)
Element replacement period	2 years or when pressure drop reached 0.1 MPa

\*1 With auto drain: 0.1 MPa (N.O. type) or 0.15 MPa (N.C. type)

\*2 When the inlet oil mist density is 30  $\text{mg}/\text{m}^3$  (ANR).

## Accessory Part No.

Applicable model	AMH150C	AMH250C	AMH350C	AMH450C	AMH550C	AMH650	AMH850
Bracket assembly (with 2 mounting screws)	AM-BM101	AM-BM102	AM-BM103	AM-BM104	AM-BM105	BM56	BM57

## Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the max. flow capacity into consideration.

(Example) Inlet pressure: 0.6 MPa

Max. flow capacity: 5  $\text{m}^3/\text{min}$  (ANR)

1. Obtain the intersecting point A of inlet pressure and max. flow capacity in the graph.
2. The AMH650 is obtained when the max. flow capacity line is above the intersecting point A in the graph.

Note) Make sure to select a model that has the max. flow capacity line above the obtained intersecting point. With a model that has the max. flow capacity line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

## Maximum Flow Capacity Line

## Caution

Be sure to read this before handling the products.  
Refer to page 9 for safety instructions and pages 10 to 12 for air preparation equipment precautions.

\*4 When the option J is selected, the auto drain and drain cock are not available.

## Options

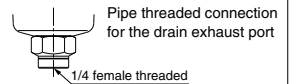

#### Symbol F: Rubber material: FKM

FKM is used for the parts such as O-ring and gasket.

#### Symbol H: For medium air pressure (1.6 MPa)

Can be used up to 1.6 MPa at maximum.

#### Symbol J: Drain guide 1/4 female threaded

#### Symbol R: IN-OUT reversal direction

Flow direction: Right to left  
 (Flow direction of the standard: Left to right)

#### Symbol T: With element service indicator

Clogging of the element can be observed visually.

#### Symbol S: With differential pressure switch (with indicator)

Clogging of the element can be observed visually or with an electrical signal.

\* The rated contact voltage is different from "U".

Max. contact capacity: 10 VA AC, 10 W DC  
 Rated contact voltage (max. operating current): 125 V AC (0.08 A), 30 V DC (0.33 A)

#### Symbol U: With differential pressure switch (with indicator)

Clogging of the element can be observed visually or with an electrical signal.

\* The rated contact voltage is different from "S".

Max. contact capacity: 10 W DC  
 Rated contact voltage (max. operating current): 30 V DC (0.33 A)

# Super Mist Separator

# AME Series

\* The AME850 only

Can separate and adsorb aerosol state fine oil particles in compressed air and change the oil lubricating compressed air to oilless air or equivalent.

Use this product for filtration of compressed air requiring higher clean air for painting lines, compressed air for clean rooms and/or equipment where oils must be avoided.

The replacement time of the element is indicated by a color change. When the element becomes saturated with oil content, a red color spot will begin to appear on the front surface.

When the red color spot becomes visible, replace the element immediately.

## Caution

Be sure to use either the AM, AMD, or AMH series as a pre-filter.

Modular connection is possible with AME150C to 550C.

(For details, refer to page 372.)

## Model

Model	AME150C	AME250C	AME350C	AME450C	AME550C	AME650	AME850
Rated flow (L/min (ANR))	200	500	1000	2000	3700	6000	12000
Port size	1/8, 1/4	1/4, 3/8	3/8, 1/2	1/2, 3/4	3/4, 1	1, 1 1/2	1 1/2, 2
Weight (kg)	0.3	0.48	0.8	1.3	2.0	4.2	10.5

Note) Max. flow capacity at 0.7 MPa.

Max. flow capacity varies depending on the operating pressure.

Refer to "Flow Rate Characteristics" and "Maximum Flow Capacity Line" (page 358).

## Specifications

Fluid	Compressed air
Max. operating pressure	1.0 MPa
Min. operating pressure	0.05 MPa
Proof pressure	1.5 MPa
Ambient and fluid temperature	5 to 60°C
Filtration rating	0.01 μm (Filtration efficiency: 99.9%)
Cleanliness at outlet	Less than 100 particles of 0.3 μm or larger per cubic foot [Less than 35 particles per 10 liters (ANR)]
Oil mist density at outlet	Max. 0.01 mg/m <sup>3</sup> (ANR) (=0.008 ppm)
Element replacement period	1. Replace the element when a red color spot occurred on the surface. (Note 1) 2. Even if a red color spot does not appear on the surface, the replacement interval for the element is when the pressure drop reaches 0.1 MPa or after two years of operation, whichever comes first.

Note 1) Failure to replace the element when the red color spot begins to appear will result in red-pigmented oil content leaking into the secondary side. If immediate element replacement is for some reason not an option, an AMF must be installed on the secondary side and the element should be replaced as soon as possible. In such cases, the AMF element should be replaced at the same time.

Note 2) Depending on the operating conditions, only a minuscule amount of red pigment, which will not affect filtration performance, may leak into the secondary side. Prolonged use under such conditions may result in minimal red-pigmented residue on the interior of the piping on the secondary side.

## Flow Rate Characteristics (Representative values) / Select the model under the max. flow capacity line. (Element initial condition)

Note) Compressed air over max. flow capacity line in the table below may not meet the specifications of the product.

**AME150C**

**AME450C**

**AME650**

**AME250C**

**AME550C**

**AME850**

**AME350C**

## Maximum Flow Capacity Line

## Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the max. flow capacity into consideration.

(Example) Inlet pressure: 0.6 MPa

Max. flow capacity: 5 m<sup>3</sup>/min (ANR)

1. Obtain the intersecting point A of inlet pressure and max. flow capacity in the graph.
2. The AME650 is obtained when the max. flow capacity line is above the intersecting point A in the graph.

Note) Make sure to select a model that has the max. flow capacity line above the obtained intersecting point. With a model that has the max. flow capacity line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

# Odor Removal Filter

# AMF Series

\* The AMF850 only

Efficiently can remove odor in compressed air with an activated carbon element. Use this unit for applications sensitive to odors, such as for clean rooms.

Can remove odor and gas ingredients in compressed air.

Activated carbon element with large filtration area.

Easy replacement of elements.

## Caution

Be sure to use the AME series as a pre-filter.

Modular connection is possible with AMF150C to 550C.

(For details, refer to page 372.)

# Auto Drain

## Operating State and Proper Use of Float Type Auto Drain

Auto drain	When pressure is not applied (After exhausting residual pressure)	When pressure is applied		Minimum operating pressure (Outlet pressure)
		Before drain accumulates	When drain accumulates	
N.O. Normally open	Drain discharged (Open) 	Drain not discharged (Close) 	Drain discharged (Open) 	<b>0.1 MPa or more</b> AM□150 to 850 AFF2 to 75
	Drain not discharged (Close) 			

◆ For both N.O. and N.C., the drain can be discharged manually by turning the drain cock to the "O" position.  
(Except for medium air pressure, AFF75B, AM□850, and free standing type)

Proper Use			Recommended auto drain
Compressor	When pressure is not applied (After exhausting residual pressure)	Cold climates	
 <b>0.75 kW or more</b>	<b>Drain not accumulated</b> Do not want to accumulate drain generated at the inlet side when pressure is not applied.	<b>Want to prevent troubles caused by freezing.</b>	N.O. <sup>(Note)</sup> Normally open
 <b>Less than 0.75 kW</b>	<b>Drain accumulated</b>	—	N.C. Normally closed

Note) For N.O. (Normally open) type, the drain discharge passage is open when pressure is not applied. For this reason, the drain exhaust port is not closed completely in a compressor with a small supply amount (less than 0.75 kW) and the air will ceaselessly blow out.

# Optional Accessories

## Spacer for Modular Connection

Use a spacer listed below when connecting modular type AFF2C to 22C, AM□150C to 550C. The spacer must be ordered separately.

(Note: Spacer with bracket (Y200T-A to Y600T-A) cannot be used.)

### ⚠ Caution

- Modular connection
- Mount the attached bracket on one side when connecting 2 sets.
- Mount the attached brackets on both sides when connecting 3 sets or more.
- As a guideline for the number of brackets, one bracket should be mounted for every 2 products.

# Bowl Assembly

# AM-CA□/AME-CA□

RoHS

## Bowl Assembly

- Use only when replacing the bowl assembly, while the body is connected to the piping.
  - Example
    - Changing the drain exhaust specification from the drain cock type to the auto drain type.
    - The bowl has been damaged.
- (Note: When changing the model due to replacement, the customer is responsible for controlling the model.)

## How to Order Bowl Assembly

The “How to Order” the bowl assembly changes with the series and size.

### ■ For AFF, AM, AMD, AMH, AMG series

- AFF2C to 22C, AM150C to 550C, AMD150C to 550C, AMH150C to 550C, AMG150C to 550C } → Based on How to Order ①.
- AFF37B, AM650, AMD650, AMH650, AMG650 → Based on How to Order ②.
- AFF75B, AM850, AMD850, AMH850, AMG850 → Based on How to Order ③.

### ■ For AME, AMF series

- AME150C to 550C, AMF150C to 550C → Based on How to Order ④.
- AME650, AME850, AMF650, AMF850 → Based on How to Order ⑤.

① For AFF2C to 22C, AM150C to 550C, AMD150C to 550C, AMH150C to 550C, AMG150C to 550C

AM - CA 150 C - A -

# Compressed Air Cleaning Filter Series

# Made to Order Specifications 1

Please contact SMC for detailed dimensions, specifications and lead times.

## ① With Differential Pressure Gauge

The replacement period due to clogging of the element can be checked by the differential pressure gauge. This is a compact unit because the differential pressure gauge is attached to the upper portion of the filter body. Differential pressure gauge (Part number: GD40-2-01) and fittings for connection are included, (but not assembled).

### Applicable Models

- AFF2C to 22C, 37B, 75B
- AM150C to 550C, 650, 850
- AMD150C to 550C, 650, 850
- AMH150C to 550C, 650, 850

(Note) Not applicable to the AMG, AME and AMF series.

## ② With Differential Pressure Switch (With Indicator) (125 VAC, 30 VDC)

The replacement period due to clogging of the element can be checked visually, and a built-in contact enables the output of an electrical signal. Differential pressure switch is included, (but not assembled).

\* Please contact SMC if conformity to the EU directive is required.

### Applicable Models

- AFF37B, 75B
- AM650, 850
- AMD650, 850
- AMH650, 850

(Note) Not applicable to the AMG, AME and AMF series.

## How to Order

Standard model no.\* **-X6**

\* Refer to How to Order of the standard specifications for the applicable models.

Example) AFF22C-06-X6

(Note) Not applicable to option symbols F, H, S, U, T and V.

## How to Order

Standard model no.\* **-X37**

\* Refer to How to Order of the standard specifications for the applicable models.

Example) AFF37B-10B-X37

(Note) Not applicable to option symbol T.

## Dimensions

(Note) The figure shows the drain cock specification. (mm)

37B	650	355
75B	850	501

# Compressed Air Cleaning Filter Series

# Made to Order Specifications 2

Please contact SMC for detailed dimensions, specifications and lead times.

### ③ With IN-OUT Flange

Makes flange piping easier when filter ports on IN and OUT are flange connection. (Flange material: Carbon steel)

### Applicable Models

- AFF11C, 22C, 37B, 75B
- AM450C, 550C, 650, 850
- AMD450C, 550C, 650, 850
- AMH450C, 550C, 650, 850
- AMG450C, 550C, 650, 850

Note) Not applicable to the AME and AMF series.

### How to Order

Standard model no.\* -X15

\* Refer to How to Order of the standard specifications for the applicable models.

Example) AMG550C-10D-X15

Note) The model with bracket (Accessory symbol B) is not available.  
Not applicable to option symbols H and V.

### ④ With Pressure Differential Gauge, IN-OUT Flange

The replacement period due to clogging of the element can be checked by the differential pressure gauge. Ports on IN and OUT are flange connection. (Flange material: Carbon steel)

### Applicable Models

- AFF11C, 22C, 37B, 75B
- AM450C, 550C, 650, 850
- AMD450C, 550C, 650, 850
- AMH450C, 550C, 650, 850

Note) Not applicable to the AME and AMF series.

### How to Order

Standard model no.\* -X17

\* Refer to How to Order of the standard specifications for the applicable models.

Example) AM450C-06D-X17

Note) The model with bracket (Accessory symbol B) is not available.  
Not applicable to option symbols F, H, S, U, T and V.

### Dimensions

Note) The figure shows the drain cock specification.

AFF series	AM, AMD, AMG, AMH series	Port size symbol*	JIS 10K FF flange	(mm)	
Size	Size			A	B

		06	20 (3/4B)	239±3	258
22C	550C	06	20 (3/4B)	255±3	288
		10	25 (1B)	259±4	301
37B	650	10	25 (1B)	297±4	345
		14	40 (1 1/2B)	298±4	352
75B	850	14	40 (1 1/2B)	384±4	489
		20	50 (2B)	378±4	497

### Dimensions

Note) The figure shows the drain cock specification.

AFF series	AM, AMD, AMG, AMH series	Port size symbol*	JIS 10K FF flange	(mm)		
Size	Size			A	B	C
11C	450C	04	15 (1/2B)	242±3	308	
		06	20 (3/4B)	239±3		
22C	550C	06	20 (3/4B)	255±3	342	
		10	25 (1B)	259±4		
37B	650	10	25 (1B)	297±4	394	80
		14	40 (1 1/2B)	298±4		
75B	850	14	40 (1 1/2B)	384±4	541	
		20	50 (2B)	378±4		

# Compressed Air Cleaning Filter Series

# Made to Order Specifications 3

Please contact SMC for detailed dimensions, specifications and lead times.

## ⑤ Auto Drain, Drain Piping Threaded Connection Type

Threaded connection for the piping of the auto drain exhaust port is possible.

### Applicable Models

- AFF2C to 22C, 37B
- AM150C to 550C, 650
- AMD150C to 550C, 650
- AMG150C to 550C, 650
- AMH150C to 550C, 650

Note) Not applicable to the AME and AMF series.

### How to Order

Standard model no.\* **-X26**

\* Refer to How to Order of the standard specifications for the applicable models.

Example) AFF22C-10D-T-X26

Note) Only available for the auto drain specification C (N.C.) and D (N.O.).  
N.C. auto drain is not available for the AFF37B, AM650, AMD650, AMG650 and AMH650.

## ⑥ White Vaseline Specifications

The grease applied to the O-ring and gasket has been changed to white vaseline.

### Applicable Models

- AFF37B, 75B
- AM650, 850
- AMD650, 850
- AME650, 850
- AMF650, 850
- AMG650, 850
- AMH650, 850

### How to Order

Standard model no.\* **-X12**

\* Refer to How to Order of the standard specifications for the applicable models.

Example) AM650-10-X12

### Dimensions

(mm)

AFF series	AM, AMD, AMG, AMH series	A
Size	Size	
2C	150C	159
4C	250C	172
8C	350C	204
11C	450C	225
22C	550C	259
37B	650	311

# Compressed Air Cleaning Filter Series

# Made to Order Specifications 4

Please contact SMC for detailed dimensions, specifications and lead times.

## ⑦ Main Line Filter for High Flow Rate with Nominal Filtration Rating of 0.3 μm

This filter is for high flows with a nominal filtration rating (0.3 μm) the same as the AM series mist separator. The specifications other than the nominal filtration rating are all equivalent to those of the AFF75A to 220A.

### Applicable Models

- AFF75A to 220A

### How to Order

\* Refer to "How to Order" for standard specifications.

## ⑧ With By-pass Port

Ports (Rc1/8) connected to the IN and OUT sides are provided in two locations. This specification can be used for applications which do not require flow rates compared to that of the main flow, which leads to reduction in piping labor and saves space.

### Applicable Models

- AMG150C to 550C, 650, 850
- AFF2C to 22C, 37B, 75B
- AM150C to 550C, 650, 850
- AMD150C to 550C, 650, 850
- AMH150C to 550C, 650, 850
- AME150C to 550C, 650, 850
- AMF150C to 550C, 650, 850

### How to Order

Standard model no.\* **-X360**

\* Refer to How to Order of the standard specifications for the applicable models. However, thread types F (G thread) and N (NPT) are not supported.

Example) AMD350C-03D-X360

Note) Not applicable to option symbols S, T and U.

### Dimensions

(mm)

AFF series	AM, AM* series	Port size	A	B
Size	Size			
2C	150C	1/8, 1/4	17	31
4C	250C	1/4, 3/8	22	34

75B	850	1 1/2, 2	90	75

# AM□/AFF Series

## Specific Product Precautions 1

Be sure to read this before handling the products.

Refer to page 9 for safety instructions and pages 10 to 12 for air preparation equipment precautions.

### Design

#### ⚠ Caution

1. Do not use under conditions where the difference between the inlet pressure and the outlet pressure exceeds 0.1 MPa.

Continuing to use the product under such conditions will not only cause a decline in cleanliness but may also lead to element damage.

2. Design the layout so that the product is installed in a location where it won't be subject to pulsations exceeding 0.1 MPa or changes in pressure.

3. Be careful of dust generation by the pneumatic equipment mounted on the outlet side.

When installing pneumatic equipment on the outlet side of the filter, dust particles may come off from outlet equipment, which will lower the cleanliness of compressed air. Consider this impact upon the cleanliness of compressed air when installing pneumatic equipment on the outlet side.

4. About when to use N.C. auto drain and N.O. auto drain.

When using the normally open (N.O.) auto drain, air may ceaselessly blow out of the drain discharge area when an air compressor with a small air discharge volume is used since the valve does not close unless the air pressure is 0.1 MPa or higher.

Refer to page 371 for proper use of the auto drain.

5. Use a tubing with proper size and length for drain piping of auto drain.

When using the AFF2C to 22C, 37B, AM□150C to 550C, 650 with auto drain:

Normally closed (N.C.) } Use the included One-touch fitting,  
Normally open (N.O.) } and keep the whole length within 5 m.

When using the AFF75B and AM□850 with auto drain:

Normally open (N.O.): Use tubing I.D. 9 mm or more and keep the whole length within 2.8 m.

6. Provide a design that prevents back pressure and back flow.

Back pressure or back flow may damage an element.

7. The following models are applicable to the Class-2 Pressure Vessel as stipulated in the order for enforcement of the Industrial Safety and Health Act.

Main Line Filter ..... AFF220A

Micro Mist Separator ..... AMD9□, AMD10□

- The individual inspection certificate (in Japanese) of the Class-2 Pressure Vessel will be sent 2 to 4 weeks after the product is delivered. Keep this certificate in a safe place, and be careful not to misplace it.
- The individual inspection certificate can only be reissued within one year. If one year or more has passed, the inspection must be performed again. Please contact SMC for reissuance and re-inspection.
- Please contact SMC regarding English certificates. In the case of exporting, this does not guarantee that the English certificate and the product itself will be accepted by the export destination country, and the English certificate may not be issued depending on the export destination country.
- When exporting this product, it is necessary for the customer to pre-confirm what standard the inspection is based on, and what certificate is required by the export destination country.

#### ⚠ Warning

1. Hold the female thread side and tighten to the recommended torque when screwing in the piping material.

Insufficient tightening torque may cause loosening or defective sealing. Over-tightening torque may damage the thread etc. If it is tightened without holding the female thread side, excessive force will be directly applied to the piping bracket resulting in a product failure.

#### Recommended Torque

Unit: N·m

Connection thread	1/8	1/4	3/8	1/2	3/4	1	1 1/2	2
Torque	7 to 9	12 to 14	22 to 24	28 to 30	28 to 30	36 to 38	48 to 50	48 to 50

\* After tightening manually, tighten additionally by about 1/6 turn with a tightening tool.

2. Do not apply torsional moment or bending moment (except the product's own weight) to the bracket. It may damage the bracket. Support external piping separately.

3. Inflexible piping such as steel piping tends to be affected by spread of excessive moment load or vibration from the piping side. Lay flexible tubing between the steel pipe and the product to prevent such effects.

## AM□/AFF Series

# Specific Product Precautions 2

Be sure to read this before handling the products.

Refer to page 9 for safety instructions and pages 10 to 12 for air preparation equipment precautions.

### Selection

#### ⚠ Caution

##### 1. About the system composition of purifying compressed air

Compressed air generally contains particulate contaminants as listed below, though there are some variations due to the compressor type and specifications. Determine the system configuration according to the desired cleanliness of compressed air and application, while referring to the "Air Preparation Equipment Selection Guide" (pages 20 and 21).

###### [Particulate contaminants in compressed air]

- Water (Water droplets, water vapor)
- Dust, chemical substances, etc. sucked from ambient air
- Degraded oil content from compressor (Including degraded oil)
- Solid foreign matter such as rust inside piping and oil

##### 2. Select according to the maximum flow capacity.

When compressed air is used for air blow, etc., find the maximum air consumption before selecting the size. (If compressed air exceeding the maximum flow rate is supplied, it may cause deterioration of the cleanliness of the compressed air, the outflow of oil mist on the outlet side, and also cause element damage.)

### Mounting

#### ⚠ Caution

##### 1. About the mounting orientation of the products

Make sure to install this product on horizontal piping. If it is installed diagonally, laterally, or upside down, the drain separated by the element will splash to the outlet side.

### Piping

#### ⚠ Caution

##### 1. Connect it with IN and OUT ports in proper location. It does not work with the connection reversed.

In the case of the AFF2C to 22C, 37B, 75B, AM□150C to 550C, 650, 850

Verify the direction of the flow of the compressed air and the mark that indicates the inlet of the product before connecting. It cannot be used if connected in the opposite direction.

In the case of free standing type

INLET and OUTLET of compressed air is labeled on the side of flange. Be sure to connect correctly.

##### 2. Use an air blower to flush the piping before connecting the piping.

Use an air blower to thoroughly flush the piping, or wash the piping to remove any cutting chips, cutting oil, or debris from inside the piping before connecting them.

##### 3. Winding of sealant tape

When screwing in the pipes or fittings, make sure to prevent cutting chips or the sealant material on the threaded portion of the pipe from entering the piping. If sealant tape is to be used, leave about 1.5 to 2 ridges of threads uncovered.

##### 4. Modular connection

Mount the attached bracket on one side when connecting 2 sets. Mount the attached brackets on both sides when connecting 3 sets or more. As a guideline for the number of brackets, one bracket should be mounted for every 2 products.

## AM□/AFF Series

# Specific Product Precautions 3

Be sure to read this before handling the products.

Refer to page 9 for safety instructions and pages 10 to 12 for air preparation equipment precautions.

### Air Supply

#### ⚠ Caution

1. **This product is not applicable to gases other than compressed air.**

This product is not applicable to gases other than compressed air (example: oxygen, hydrogen, flammable gas, mixed gas).

2. **Do not use compressed air that contains chemicals, organic solvents, salt, or corrosive gases.**

Do not use compressed gas containing chemicals, organic solvents, salt or corrosive gas. This can cause rust, damage to rubber and resin parts, or malfunction.

3. **Operate within the specified operating pressure range.**

Damage, failure, or malfunction may occur if this product is operated above the maximum operating pressure. If this product is used below the minimum operating pressure, increase in the air-flow resistance due to clogging will have such influence that the desired flow rate cannot be obtained. If this product is used under a low pressure such as for a blower, conduct sufficient tests by users to confirm the specifications and performances.

### Operating Environment

#### ⚠ Caution

1. **Do not use in the following environments, as this can cause failure.**

- 1) In locations having corrosive gases, organic solvents, and chemical solutions, or in locations where these elements are likely to adhere to the equipment.
- 2) In locations where salt water, water, or water vapor could come in contact with the equipment.
- 3) In locations that is exposed to shocks and vibrations.

2. **Be careful about the contamination of the workpieces due to entrainment of the ambient air.**

If compressed air is used for air blow, compressed air blowing out from the blow nozzle may entrain foreign matter (solid particles and liquid particles) floating in the ambient air, blowing it against the workpieces and causing adhesion. Therefore, sufficient precautions must be taken about the ambient environment.

### Maintenance

#### ⚠ Caution

1. **Replace the element immediately when the time for its replacement has arrived. If the element is used continuously without replacing, not only will foreign matter flow to the outlet side, but the element may also be damaged.**

To replace the element, replace the O-ring and the gasket, too. For the replacement procedure, refer to the operating manual. (For element dimensions, refer to page 386.)

##### <Element replacement>

- a. In the case of the AFF2C to 22C, 37B, 75B, AM□150C to 550C, 650, 850

The replacement interval for the element is when the pressure drop reaches 0.1 MPa or after two years of operation, whichever comes first. A pressure drop can be verified with the element service indicator (-T) or with differential pressure gauge (Made to Order).

- b. In the case of free standing type

The replacement interval for the element is when the pressure drop reaches 0.1 MPa or after one year of operation, whichever comes first. Confirm the pressure drop with a pressure gauge. (With pressure gauge: -G)

- c. In the case of the AME

Regardless of the time for its replacement indicated in "a" above, replace the element when a red color spot occurred on the surface.

- d. In the case of the AMF

Regardless of the replacement time indicated in "a" or "b," replace the element when you notice an odor coming from the outlet side.

2. **Be sure to exhaust the drain accumulated in the filter container.**

Failure to discharge the drain will allow the accumulated drain to flow over to the outlet side.

When using the AFF2C to 22C, 37B, 75B, AM□150C to 550C, 650, 850 with drain cock, drain guide or ball valve, Discharge the drain when the liquid level of the drain is confirmed in the sight glass. If the drain is not discharged properly, it will flow over to the outlet side.

# AM□/AFF Series

## Specific Product Precautions 4

Be sure to read this before handling the products.

Refer to page 9 for safety instructions and pages 10 to 12 for air preparation equipment precautions.

### Maintenance

#### ⚠ Caution

##### 3. In the case of a type with auto drain

- The auto drain operates when the drain accumulates, and discharges the drain.
- When using the AFF2C to 22C, 37B, AM□150C to 550C, 650 with auto drain, the drain is automatically discharged with the knob tightened to the "S" side. Manual drain discharge, however, is also possible.

##### <Manual operation>

A manual knob attached to the auto drain end is tightened to the "S" side in normal operation. The drain can be discharged by loosening it to the "O" side. (Be careful, however, if pressure remains inside the filter when the drain is discharged, the drain will blow out from the drain port.)

##### 4. The drain exhaust parts replacement method and necessary parts are different depending on when it was manufactured.

Description	Necessary parts		Applicable size
	Manufactured Jan. 2010 or before [Manufacturing lot No. up to oo]	Manufactured Feb. 2010 onwards [Manufacturing lot No. oP to onwards] <sup>Note 2)</sup>	
Drain cock	Non-replaceable	AM-SA039	2C to 22C 150C to 550C 650 37B
Drain guide	Non-replaceable	Thread type Rc: AM-SA040 Thread type G: AM-SA040-F Thread type NPT: AM-SA040-N	
N.O. auto drain	Thread type Rc, G: AD43PA-D Thread type NPT: NAD43PA-D		
N.C. auto drain	Thread type Rc, G: AD53PA-D Thread type NPT: NAD53PA-D		2C to 22C 150C to 550C
Ball valve set	AM-SA004		75B, 850
N.O. auto drain <sup>Note 1)</sup>	Thread type Rc: AD34PA-D Thread type G: EAD34PA-D Thread type NPT: NAD34PA-D		

Note 1) Tool (AM-SA005) for replacing auto drain is necessary for the 75B or 850.

Note 2) When replacing parts with a production lot no. oP or after, order the parts with the same shape as the following figures.

Drain cock  
AM-SA039

Drain guide  
AM-SA040

##### 5. The drain exhaust parts are different according to option or thread.

Applicable models: AFF2C to 22C, 37B, AM, AMD, AMH, AMG150C to 550C, 650

Drain exhaust specifications	Option	Thread type		
		Rc	G	NPT
Drain cock	Except F, V	AM-SA039		
	F	AM-SA039-1		
	V	AM-SA039-2		
Drain guide	FV	AM-SA039-3		
	Except F, V	AM-SA040	AM-SA040-F	AM-SA040-N
	F	AM-SA040-1	AM-SA040-F-1	AM-SA040-N-1
	V	AM-SA040-2	AM-SA040-F-2	AM-SA040-N-2
	FV	AM-SA040-3	AM-SA040-F-3	AM-SA040-N-3
N.C. auto drain	Except F, V	AD53PA-D		NAD53PA-D
	F	AD53PA-D-X155		NAD53PA-D-X155
	V	AD53PA-D-X113		NAD53PA-D-X113
N.O. auto drain	Except F, H, V	AD43PA-D		NAD43PA-D
	F	AD43PA-D-X155		NAD43PA-D-X155
	V	AD43PA-D-X113		NAD43PA-D-X113
	H (Note)	—	—	—

Note) For the option H, the auto drain cannot be replaced.

### Others

#### 1. Element interchange

Following is the element dimensions for the AFF and AM□ series:

Elements of the same body size have the same dimensions.

#### Element Dimensions

Model	Element dimensions (Reference value)	
	øA	B
AFF2C, AM□150C	49	42
AFF4C, AM□250C	58	52
AFF8C, AM□350C	70	78
AFF11C, AM□450C	82	88
AFF22C, AM□550C	96	118
AFF37B, AM□650	122	144
AFF75B, AM□850	142	223

#### 2. About oil-free products

The AFF and AM□ series includes parts (such as resin parts, rubber parts, and elements) that does not allow degreasing wash. Therefore, oil-free products with all parts degreasing washed is not available.

#### 3. Degreasing wash

Certain parts such as the body and housing can be degreased. Please contact SMC for further details after confirming the specifications.

(available as Option or Made to Order)

## AM□/AFF Series

# Specific Product Precautions 5

Be sure to read this before handling the products.

Refer to page 9 for safety instructions and pages 10 to 12 for air preparation equipment precautions.

### Others

## Caution

### 4. Change of oil

On the AFF and AM□ series, no oil such as grease is applied to parts exposed to compressed air. However, for certain specifications, there are some parts to which oil is applied. It is possible to change the type of applied oil (as Option or Made to Order).

### 5. Internal volume of filter container

Following is the volume of filter containers of the AFF and AM□ series (when the element is removed).

#### Volume Inside Filter

Model	Volume inside filter (Reference value) (cm <sup>3</sup> )
AFF2C, AM150C, AMD150C AMG150C, AMH150C	250
AFF4C, AM□250C, AMD250C AMG250C, AMH250C	350
AFF8C, AM□350C, AMD350C AMG350C, AMH350C	600
AFF11C, AM□450C, AMD450C AMG450C, AMH450C	1000
AFF22C, AM□550C, AMD550C AMG550C, AMH550C	1500
AFF37B, AM□650, AMD650 AMG650, AMH650	3000
AFF75B, AM□850, AMD850 AMG850, AMH850	9000
