Filter Selection by Main Application

●How to read the chart

Example)

- Application: Scale removal in water for cleaning
- Treatment flow rate: 170 L/min
- Nominal filtration accuracy: Left up to the manufacturer
- Port size: 2

For the above specifications, first see "Applications and Applicable Element". The applicable element for water for cleaning is polypropylene, with a nominal filtration accuracy of 20 µm, and the applicable filter model are all models except FGDC and DGDE.

Next, see "Applicable Filter and Treatment Flow Rate". Follow the item where the fluid name is water for cleaning to the bottom, and at the point where the specifications are 170 L/min or more, see the left. The filter models FGESA, FGELA and FGETA are the applicable filter models.

Therefore, the selected filter model and element are:

Filter model = FGESA-20

Element = Polypropylene 20 µm

The replacement period due to clogging of the element can be checked visually (X77), and a built-in contact enables the output of an electrical signal (X78).

Applicable models

- FGDC, FGDE
- FGDT, FGDF

Note 1) A magnet is used on the wetted parts.

Note 2) For the FGDT and the FGDE, the material of the filter body and that of the O-ring differ.

Note 3) Be sure to check whether the fluid to be used is compatible with the product in advance.

Differential Pressure Indication

■ Differential pressure indicator

- Operation pressure—0.1±0.02 MPa
- Once a value is displayed, it will continue to be displayed until reset, even if the pump is stopped. (Reset type)
- Perform element replacement when the red ring floats up and covers the entire inspection window.

■ Differential pressure indication switch

- Operating pressure—0.1±0.02 MPa
- When a value has been displayed, it will be automatically reset when the pump is stopped. (Non-reset type)
- This is a visual dual-purpose. Perform element replacement when the switch has actuated (when the red ring floats up and covers the entire inspection window).
- N.C. and N.O. common

- A light load has an inrush current 10 times greater.
- Lead wires are connected using a soldering terminal.
- The electrical entry is equipped with a conduit (G1/2) and grommet.
- Please wire freely to the microswitch indication symbol 1(COM.), 2(N.C.) and 3(N.O.).
- If a holding mechanism is necessary for the non-reset type, provide it using electric circuits.

FGES/FGEL type
(V-band type)

FGET type
(Bolt tightening type)

- Suitable for medium flow rate, low pressure "filtration."
- Element replacement is easy with the V-band type.
(with cover anti-scattering mechanism)
- Can be used with a wide range of fluids

Note 1) The industrial filter described in this catalog are products in which an element is incorporated into a vessel.

Note 2) To order only an element (replacement part), refer to "How to Order" on pages 41 and 42.

Note 3) When ordering only a vessel (replacement part), delete each symbol for "Element category", "Nominal filtration accuracy (μm)" and "Element seal material" from the above model identification method.

Note 4) Please use industrial filters in combination with parts made by SMC (vessels, elements etc.)

Note 5) Do not use the V-band type for gases.

- This type has a vertical structure, so there is little loss of “filtrate.”
- Maintenance — element replacement in particular is easy.
- When used for a gas, the product is handled as a class 2 pressure vessel compliant special order product. (Except for products with an internal capacity of less than 40 L) ^{Note 7)}
- Confirm the lead time with each order.

Calculation example) If the number of arranged elements is 7, the element length is L500, and length per element is L250, then:
(Necessary number of elements) = 7 × $\frac{500}{250}$ = 14

Note 2) To order only an element (replacement part), refer to “How to Order” on pages 41 and 42.

Note 3) When ordering only a vessel (replacement part), delete each symbol for “Element category”, “Nominal filtration accuracy (μm)” and “Element seal material” from the above “How to Order”.

Note 4) Please use industrial filters in combination with parts made by SMC (vessels, elements etc.)

Note 5) For the “FGCS” model, carbon steel is used and plated or coated with silver in locations except for wetted parts material.

Specifications

Standard Specifications

Model	FGC
Max. operating pressure (MPa)	1, 2, 4
Max. operating temperature (°C)	80
Port size	15 (1/2 ^B), 20 (3/4 ^B), 25 (1 ^B) <small>Note</small>
Wetted parts material (Vessel)	SGP/Stainless steel 304
Gasket	Non-asbestos

Note 1) JIS10KFF (FGC1), JPI300^LRF (FGC2) and JPI600^LRF (FGC4) are used for this flange.
Note 2) The FGC1 can only be used with gas.

Elements Sintered Metal/Fiber

Nonstandard elements of the FQ1 series can also be used commonly.
(For details, refer to Nonstandard Elements on page 84. Also, refer to page 3 for selection.)

Sintered Metal Filter Elements

- **Outstanding mechanical strength, heat resistance and chemical resistance.**
- **Formed by sintering finely powdered metal, so a high filtration accuracy can be obtained.**
- **Even if clogging progresses, the element can be reused by cleaning.**
- **Main applications**

Ideal as a check filter for keeping fluid clean.
All types of gases, fluids, general solvents and high-temperature fluids

Caution

The bronze element may be discolored by the moisture included in the atmosphere, but this does not affect the characteristics.

Fiber Elements

- **Four types of materials with different characteristics are available so the filters are applicable to any application.**
- **Elements are economical because particle capturing capacity is excellent, and element life is long.**
- **Elements are disposable so maintenance and replacement are easy.**
- **Main applications**

Cotton	Cleaning water, General neutral fluids, General solvents, Dry air
Polypropylene	Plating fluids, General acids, Alkali fluids, Industrial water, Cooling water
Glass fiber	Acid fluids, High-temperature fluids

Specifications

Material	Bronze	Stainless steel 316
Operating temperature (C°) ^{Note 2)}	0 to 150	0 to 150
Nominal filtration accuracy (μm) ^{Note 3)}	1, 2, 5, 10, 20, 40, 70, 100, 120	
Max. differential pressure resistance	0.7 MPa	
Element replacement differential pressure	0.1 MPa	
Chemical resistance	Acid	Cannot be used.
	Alkali	Can be used. ^{Note 1)}
Element category of How to Order	B	S

Note 1) Cannot be used with hydrochloric acid, hydrofluoric acid or phosphoric acid.

Note 2) Varies depending on the seal material used.

Note 3) The name is for distinguishing the raw material, and is different from the actual filtration rating.
(Refer to 11. Nominal filtration accuracy on page 118.)
